Powerfully flexible brilliant
and reliable for any application

PX9210 / PU9220+

BenQ Professional High Brightness Installation Projectors

Stunning Performance and Versatility Made Simple

- Thrilling DLP picture quality from the world's #1 bestselling DLP projector brand
- Simple and flexible installation versatility
- Intuitively simple operation
- Hassle-free maintenance and lasting reliability

BenQ, the global #1 leading DLP projector maker, provides uncompromised projection performance, powerfully rich features, and carefree dependability with the new Professional High Brightness Series fixed-installation projectors. Intelligently designed with features such as optional lens capability, H/V lens shift, digital/analog/LAN connectivity, comprehensive image geometry and color adjustability, these projectors deliver over 5000 lumens of high brightness for large venues at a price/performance edge that's never been seen before.

Flexible Installation

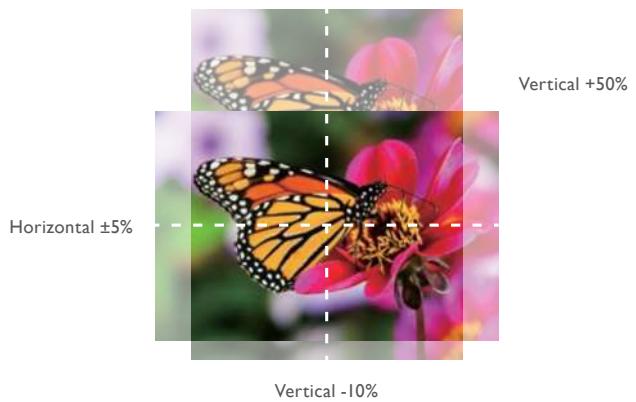

Optional Lens Versatility for Any Installation

Ensuring optimal projector installation and performance in virtually any venue, the new BenQ P92 Series projectors accept five types of optical lenses ranging from short-throw to long-throw. Optional lenses are available with glass materials for better focus and large apertures for a brighter image.

Zoom, Focus, and Horizontal/Vertical Lens Shift

Providing powerful features at an accessible value, the P92 Series offers wide-range zoom, focus and H/V lens shift functions* to perfectly frame projected images even when obstacles present installation challenges.

*PX9210 as example.
Support manual lens shift.
Lens Shift available in all interchangeable lenses.

360° Rotation-Capable Projection

Brilliant pictures and video can be projected onto ceilings, walls, floors, or angled signage with P Series projectors, which can be tilted vertically at any angle. Visualize amazing scenes at shopping centers, galleries, museums, theaters - or anywhere you can imagine.

Central Lens Design

Unlike offset designs, BenQ's symmetrically centered lens design allows easy installation without special calculations or adjustments.

The protection lens is placed at the center.

Clear Visual Communication through Stunning Picture Quality

Ultra High Brightness

Presentations in large, brightly lit venues remain clear and sharp with BenQ's high brightness technology. The added luminance boosts vivid color intensity and depth for lights-on presentations allowing audience interaction and note-taking.

Enhanced Image Quality and Readability Improve Information Processing

Ultra High Resolution up to WUXGA

With up to 2.3 million pixels of resolution far surpassing 1080p, audiences can view cinema-quality Full HD content in breathtaking clarity, and presenters can show more content and detail without sacrificing readability. High resolution brings out fine details and produces more lifelike three-dimensional appearance for pictures while resolving even small text with crisp precision.

*WUXGA available on PU9220 models.

Ultra High Contrast Ratio

The culmination of BenQ's projector expertise and cutting-edge DLP technology delivers up to an astounding 4000:1 contrast ratio to significantly improve the black level and superbly render sharply detailed images.

High Contrast

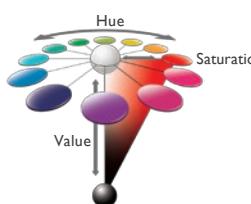

(Simulated Photos)

Low Contrast

Independent 3D Color Management for Six Primary Colors

BenQ's exclusive 3D color management tool ensures 100% complete color control with the freedom to independently fine-tune the hue, grain and saturation levels of all six primary colors (R/G/B/C/M/Y).

Enduring DLP Image Perfection

Featuring a DLP projection engine nearly sealed against dust and heat, BenQ projectors exhibit virtually no image distortion from panel aging. Millions of micro mirrors on the state-of-the-art DMD chip reflect pure light through the color wheel, producing precise details and intensely saturated colors without degradation over time.

Optical Quality Glass Lens

Far superior to plastic lenses, BenQ High Brightness Projectors feature pure all-glass lenses for crystal clear focus and bright, vibrant images.

Hassle-Free Maintenance and Dependable Reliability

Multi-Projector Management via LAN (AMX/CRESTRON/PJ-Link)

IT managers can conveniently operate and check the status of multiple remote projectors via LAN to minimize cost and resources. The LAN interface is compatible with PJ-Link, Crestron, and AMX control systems for convenient system integration with various third-party components.

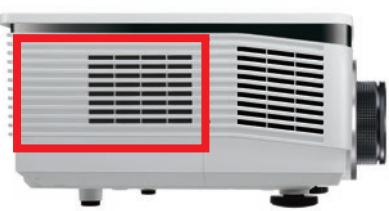

Complete Connectivity: Digital, Analog and Networking Control

A complete set of digital and analog inputs as well as networking control connection terminals give presenters the freedom to utilize various tools and devices to enrich each and every presentation. Installers and IT managers can easily manage multiple projectors over LAN using the integrated RJ45 connection.

Unibody Dust Filter Option

An optional feature on the PX9210 and PU9220, a sleek unibody dust filter facilitates projector maintenance and longevity in especially dusty environments. Unlike clunky conventional two-piece designs, the all-in-one design is neater and easier to remove for cleaning.

* Optional dust filter.

Intuitive Operation and Total Ease of Use

Quick-Release Lens Swap Button

The hot-swappable lens unlocks instantly with the quick-release button to quickly and conveniently change lenses.

Side Chassis Lamp Door

A quick-access side door allows installers and IT managers easy lamp replacement without removing the projector from ceiling-mount or stacked installations.

Magnetic Cover

A magnetic cover protects the controls while eliminating pull-and-push-forces which can affect precise projector alignment.

Eco-Conscious Standby Modes

Adhering to strict European regulations, networked standby power consumption is cut down to a miserly 6 watts to reduce environmental impact and total cost of ownership. In eco mode, power consumption is even better at a minuscule 0.5 watts.

Specification

Model Name	PX9210	PU9220+
Picture		
Basic Information		
Projection System	DLP	DLP
