Where Projectors Roam Free

	Indicates procedures which may result in damage or injury if sufficient care is not taken.
	Indicates additional information and points which may be useful to know regarding a topic.
	Indicates a page where useful information regarding a topic can be found. Click on the page number to display that page.
	Indicates that an explanation of the underlined word or words in front of this symbol appears in the glossary of terms. Click the underlined word or words to display the corresponding entry in the "Glossary" section of the "Appendices".
	Indicates operating methods and the order of operations. The procedure indicated should be carried out in the order of the numbers.

When "unit" or "projector" appears in the text of this *User's Guide*, it may refer to items which are accessories or optional equipment in addition to the main projector unit itself.

Automatic keystone correction function

The vertical angle of the projector is detected, so that any vertical keystone distortion in the projected images can be automatically corrected. [p.32](#)

Automatic setup function

When projecting computer images, the signals from the connected computer are detected automatically and adjusted so that the optimum images are projected. Even if several people are giving presentations using the same projector, the optimum picture quality can be obtained simply by disconnecting and reconnecting the computers. Each individual setting can also be adjusted manually.

[p.35](#)

Colour mode function

The optimum images can be projected simply by selecting the image quality from the following six preset settings according to the projection environment being used. No other troublesome colour adjustments are necessary.

[p.38](#), [p.45](#), [p.47](#)

- [sRGB](#)
- Normal
- Meeting
- Presentation
- Theatre
- Game

Compact and lightweight

The projector has a compact body with a footprint the size of a A4 page (24 (D) × 31.5 (W) × 8.7 (H) cm (9.45 (D) × 12.4 (W) × 3.43 (H) in.) and is light in weight (approximately 2.9 kg. (6.4 lbs)), making it easy to carry.

Brilliant, attractive images

Despite its compact size, the projector can display images at high resolutions with a high degree of luminance, providing beautifully clear images even in bright environments.

Easy to Operate

The accessory remote control can be used for operations such as pausing projection (see "Freeze" on [p.41](#)) and zooming in on important areas of an image (see "E-Zoom" on [p.43](#)). In addition, the remote control can be used to move the pointer around on the computer screen during projection (see "Wireless Mouse Function" on [p.19](#)). If using the wireless mouse function, you can use the remote control to scroll back and forth through pages when projecting a PowerPoint presentation.

Front/Top

- 
- **Zoom ring**  [p.31](#)
Adjusts the image size.
 - **Focus ring**  [p.31](#)
Adjusts the image focus.
 - **Speaker**
 - **Remote control light-receiving area**  [p.11](#)
Receives signals from the remote control.
 - **Air exhaust vent**
 - **Front adjustable foot**  [p.32](#)
Extend and retract to adjust the projection angle.
 - **Lens cover**
Attach when not using the projector to prevent the lens from becoming dirty or damaged.
 - **Warning indicator**  [p.63](#)
The colour and ON status (illuminated/ flashing) indicates problems with the projector.
 - **Power indicator**  [p.62](#)
Flashes or lights in different colours to indicate the operating status of the projector.
 - **Control panel**  [p.7](#)
 - **Front adjustable foot**  [p.32](#)
Extend and retract to adjust the projection angle.
 - **Foot adjust button**  [p.33](#)
Another foot adjust button is located on the right side. Press both foot adjust buttons when extending and retracting the front adjustable feet.

Control Panel

- **[Power] button**  [p.27, p.29](#)

Turns the projector power on and off.

- **[Help] button**  [p.60](#)

Displays the online help menu to assist you if you have a problem.

- **[Source] button**  [p.28](#)

Switches the input source between the Computer/Component Video port, S-Video port and Video port each time the button is pressed.
When pressed while a help menu is being displayed, it accepts the menu item that is currently selected.
 [p.60](#)

- **[Keystone] button**  [p.34](#)

Press to manually correct keystone distortion in images.
When pressed while a help menu is being displayed, it selects items in the menu.  [p.60](#)

Rear

- **Computer/Component Video port**  [p.16, p.23](#)

Inputs analogue video signals from a computer and [component video](#) signals from other video sources.

- **Monitor Out port**  [p.21](#)

Outputs the projected analogue video signal from a computer to an external monitor. This feature is not available for video equipment signals.

- **Remote control light-receiving area**  [p.11](#)

Receives signals from the remote control.

- **Power inlet**  [p.26](#)

Connects the power cable.

- **Audio 1 port**  [p.18, p.24](#)

Inputs audio signals from a computer or component video equipment. Connect using a stereo mini jack.

- **S-Video port**  [p.22](#)

Inputs [S-Video](#) signals to the projector from other video sources.

- **Video port**  [p.22](#)

Inputs [composite video](#) signals to the projector from other video sources. Connect using an A/V cable.

- **USB port**  [p.19, p.89](#)

Connects the projector to a computer via the USB cable.

- **Security lock (Ⓡ)**  [p.86](#)

- **Control (RS-232C) port**  [p.89](#)

Connects the projector to a computer using an RS-232C cable. This port is for control use and should not be used by the customer.

- **Audio 2 port**  [p.24](#)

Inputs audio signals from a video source. Connect using an A/V cable.

Base

- **Suspension bracket fixing points (4 points)**  [p.13](#), [p.84](#)

Install the optional ceiling mount here when suspending the projector from the ceiling.

- **Air filter (air intake vent)**  [p.74](#), [p.80](#)

Prevents dust and other foreign particles from being drawn into the projector. When replacing the lamp, replace the air filter also.

- **Lamp cover**  [p.77](#)

Open this cover when replacing the lamp inside the projector.

- **Remote control holder**  [p.11](#)

Store the accessory remote control in here when not using it.

Remote Control

- 
- The diagram shows an Epson remote control with the following buttons and functions:
- Remote control light-emitting area** (p.11): Outputs remote control signals.
 - [Page down]/[Page up] buttons** (p.19): When using the remote control as a wireless mouse, press these buttons to scroll back and forth through pages when projecting a PowerPoint presentation.
 - Input select buttons** (p.28):
 - [Computer]: Switches the signal source to the images being input from the Computer/Component Video port.
 - [S-Video/Video]: Switches the signal source being input from the S-Video port and the Video port.
 - [Menu] button** (p.57): Displays or hides the configuration menus.
 - [E-Zoom] button (⊖)** (p.43): Reduces the part of images that have been enlarged using the [⊕] button.
 - [▲][▼][◀][▶] buttons** (p.20, p.57, p.60): When using the remote control as a wireless mouse, these buttons move the pointer in the direction corresponding to the button that was pressed. When a configuration menu or help menu is displayed, these buttons select menu items and setting values.
 - [Auto] button** (p.35): Use this button to automatically adjust computer images to the optimum images when automatic setup has been set to "OFF".
 - [Power] button** (p.27, p.29): Turns the projector power on and off.
 - [Color Mode] button** (p.38): Selects the colour mode. The colour mode changes in the order of Normal, Meeting, Presentation, Theatre, Game and sRGB each time the button is pressed.
 - [A/V Mute] button** (p.40): Momentarily turns off the audio and video.
 - [Freeze] button** (p.41): Keeps the current computer or video image on the screen.
 - [E-Zoom] button (⊕)** (p.43): Enlarges the part of images without changing the size of the projection area.
 - [Enter] button** (p.20, p.57, p.60): Accepts a menu item or displays the next screen or menu while viewing a configuration menu or help menu. Acts as a mouse left-click when using the remote control as a wireless mouse.
 - [ESC] button** (p.20, p.58): Stops the current function. Displays the previous screen or menu while viewing a configuration menu. Acts as a mouse right-click when using the remote control as a wireless mouse.

Using the Remote Control and Remote Operating Range

When using the remote control for the first time, pull out the insulating tape that is protruding from the battery holder. When the insulating tape is pulled out, the remote control can then be used.

■ Using the Remote Control

The remote control is used in the following way.

PROCEDURE

Point the remote control light-emitting area toward one of the remote control light-receiving areas on the projector and operate the remote control buttons.

TIP

- *Do not allow sunlight or light from fluorescent lamps to shine directly onto the projector's remote control light-receiving areas, otherwise it may interfere with the reception of signals from the remote control.*
- *If delays in the responsiveness of the remote control occur or if it does not operate after it has been used for some time, it probably means that the battery is getting flat. If this happens, replace the battery with a new one. [p.75](#)*
- *When not using the remote control, place it into the remote control holder underneath the projector so that it does not get lost.*

Hook a finger into the middle of the remote control holder and pull it downwards.

After placing the remote control into the holder, push the remote control holder in until it clicks into place.

Remote Operating Range

Use the remote control within the ranges indicated below. If the distance or angle between the remote control and the remote control light-receiving area is outside the normal operating range, the remote control may not work.

Operating distance	Operating angle
Approx. 6 m (20 ft.)	Approx. $\pm 30^\circ$ horizontally Approx. $\pm 15^\circ$ vertically

Approx. $\pm 30^\circ$ horizontally

Approx. $\pm 15^\circ$ vertically

When suspended from the ceiling

Setting Up the Projector

The projector supports the following four different projection methods, allowing you to choose the best method for displaying your images.

CAUTION

Before setting up the projector, be sure to first read the separate Safety Instructions/World-Wide Warranty Terms.

- Front projection

- Rear projection using a translucent screen

- Front/ceiling projection

- Rear/ceiling projection using a translucent screen

* A special method of installation is required in order to suspend the projector from the ceiling. Please contact the place of purchase if you would like to use this installation method. The optional ceiling mount is required when installing the projector to the ceiling. [☛ p.84](#)

TIP

When using rear/ceiling projection using a translucent screen, set the "Ceiling" or "Rear Proj." command in the "Advanced" menu to match the installation method. [☛ p.53](#)

Screen Size and Projection Distance

The distance between the projector and the screen determines the actual image size.

Recommended distance	89–1050 cm (2.9–34.4 ft.)
-----------------------------	---------------------------

While referring to the table below, position the projector so that the images are projected onto the screen at the optimum size.

The values should be used as a guide for setting up the projector. The actual values will vary depending on projection conditions and the zoom setting.

4:3 Screen size (cm (in.))	Projection distance A (cm (ft.))	Distance from centre of lens to bottom edge of screen B (cm (in.))
30" (61 × 46 (24.0 × 18.1))	89–103 (2.9–3.4)	4 (1.6)
40" (81 × 61 (31.9 × 24.0))	120–138 (3.9–4.5)	6 (2.2)
60" (120 × 90 (47.2 × 35.4))	181–208 (5.9–6.8)	8 (3.3)
80" (160 × 120 (63.0 × 47.2))	243–278 (8.0–9.1)	11 (4.4)
100" (200 × 150 (78.7 × 59.1))	304–349 (10.0–11.4)	14 (5.5)
200" (410 × 300 (161.4 × 118.1))	610–699 (20.0–22.9)	28 (10.9)
300" (610 × 460 (240.2 × 181.1))	916–1050 (30.1–34.4)	42 (16.4)

* When installing against a wall, leave a space of about 20 cm (7.9 in.) between the projector and the wall.

TIP

- *The projector's lens allows a zoom ratio of up to about 1.2. The image size at the maximum zoom setting is about 1.2 times bigger than the image size at the minimum zoom setting.*
- *The image size will be reduced when keystone correction is carried out.*

CAUTION

When connecting the projector to a computer, be sure to check the following.

- *Turn off the power for both the projector and the computer before connecting them. If the power for either device is on at the time of connection, damage may result.*
- *Check the shapes of the cable connectors and the device ports before making the connections. If you try to force a connector to fit a device port with a different shape or number of terminals, damage to the connector or port may result.*

TIP

- *You may need to purchase a separate adapter depending on the shape of the computer's port. Refer to the documentation provided with the computer for further details.*
- *If the computer and projector are too far away from each other for the accessory computer cable to reach, use the optional VGA-HD15 PC cable. See "Appendices: Optional Accessories" [p.84](#)*

Eligible Computers

The projector cannot be connected to some types of computer, or projection of images may not be possible even if actual connection is possible. Make sure that the computer you intend to use satisfies the conditions given below.

- **Condition 1:** The computer must have an image signal output port. Check that the computer has a port such as an "RGB port", "monitor port" or "CRT port" which can output image signals.
If the computer has a built-in monitor, or if using a laptop computer, it may not be possible to connect the computer to the projector, or alternatively you may need to purchase a separate external output port. Refer to the documentation for your computer under a heading such as "Connecting an external monitor" or similar for further details.
- **Condition 2:** The display resolution and frequency of the computer must be listed in the "List of Supported Monitor Displays". See "Appendices: List of Supported Monitor Displays" [p.91](#).
Some computers allow you to change the output resolution, so if necessary, change the resolution to one that matches a setting in the "List of Supported Monitor Displays", while referring to the documentation provided with the computer.

Projecting Images from the Computer

The shape and specifications of the computer's monitor port will determine what type of cable should be used. Check the following to see which type of port your computer has.

■ If the Monitor Port is a Mini D-Sub 15-pin Port

Use the accessory computer cable to connect the Computer/Component Video port at the rear of the projector to the monitor port of the computer.

TIP

- After projection starts, change the "Input Signal" setting in the "Video" menu to "Computer".  p.46
- If more than one external component is connected to the projector, use the [Source] button on the projector's control panel or the [Computer] button on the remote control to select the Computer port as the input source.  p.28
- Do not bind the power cable and the computer cable together, otherwise image interference or errors in operation may result.

■ If the Monitor Port is a **5BNC** Port

Use the optional VGA- HD15/BNC PC Cable to connect the Computer/Component Video port at the rear of the projector to the monitor port of the computer. See "Appendices: Optional Accessories"  p.84

TIP

- After projection starts, change the "Input Signal" setting in the "Video" menu to "Computer".  p.46
- If more than one external component is connected to the projector, use the [Source] button on the projector's control panel or the [Computer] button on the remote control to select the Computer port as the input source.  p.28
- Do not bind the power cable and the computer cable together, otherwise image interference or errors in operation may result.

■ If the Monitor Port is a 13w3 Port

Some workstation-type computers have a 13w3 monitor port.

Use a commercially-available 13w3 ↔ D-Sub 15-pin cable to connect the Computer/Component Video port at the rear of the projector to the monitor port of the computer.

TIP

- After projection starts, change the "Input Signal" setting in the "Video" menu to "Computer". 📖 p.46
- If more than one external component is connected to the projector, use the [Source] button on the projector's control panel or the [Computer] button on the remote control to select the Computer port as the input source. 📖 p.28
- Do not bind the power cable and the computer cable together, otherwise image interference or errors in operation may result.
- Some workstations may require a special cable. Consult the workstation manufacturer for further details.

Playing Sound from the Computer

The projector has a single built-in speaker with a maximum output of 1 W. If the computer that is connected to the projector has an audio output port, you can output sound from the computer through the projector's speaker by connecting the computer's audio output port and the Audio 1 port (stereo mini jack) on the rear of the projector using a stereo mini jack audio cable (commercially-available). It is recommended that you use an audio cable with a 3.5 mm diameter stereo mini jack.

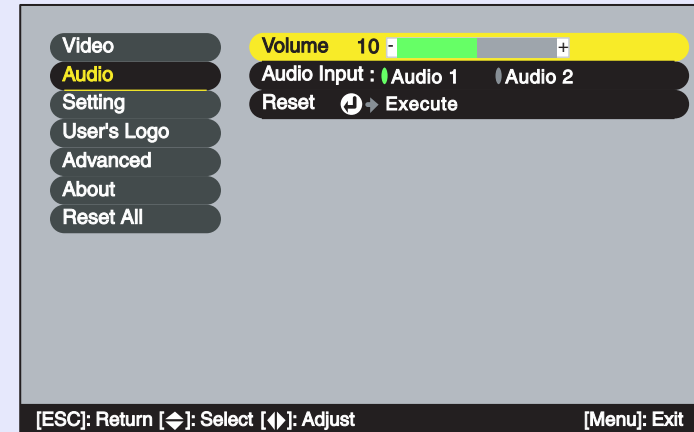

Use the following procedure to adjust the volume of the sound output.

PROCEDURE

- 1 Press the [Menu] button on the remote control, and then select "Volume" from the "Audio" menu.

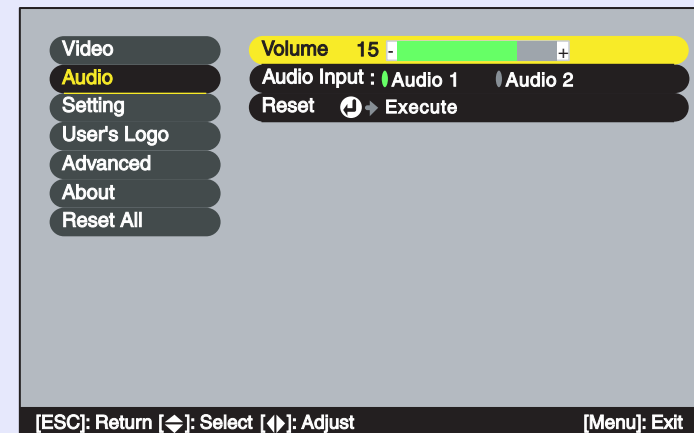

For details on this operation, refer to "Using the Configuration Menus". [p.57](#)

2

- 2 Use the [Left] and [Right] buttons to adjust the volume.

The volume is increased or reduced each time a button is pressed.

3

- 3 After making the adjustment, press the [Menu] button to exit the configuration menu.

Using the Remote Control to Operate the Mouse Pointer (Wireless Mouse Function)

You can use the remote control as a wireless mouse to control the mouse pointer on the computer screen. To do this, you must use the accessory [USB](#) cable to connect the USB port of the computer to the USB port at the rear of the projector.

Computer	Mouse used	Applicable cable
Windows 98/2000/Me/XP Home Edition/XP Professional	USB mouse	USB cable (accessory)
Macintosh (OS 8.6 - 9.2/X/10.1)	USB mouse	USB cable (accessory)

TIP

- *The USB cable can only be connected to computers with a standard USB interface. If using a computer which is running Windows, the computer must have had a full version of Windows 98/2000/Me/XP Home Edition/XP Professional installed. If the computer is running a version of Windows 98/2000/Me/XP Home Edition/XP Professional that has been upgraded from an earlier version of Windows, correct operation cannot be guaranteed.*
- *It may not be possible to use the mouse function under some versions of both the Windows and Macintosh operating systems.*
- *Some computer settings may have to be changed in order for the mouse function to be used. Consult the documentation for the computer for further details.*

* When using the remote control as a wireless mouse, the [Page down] and [Page up] buttons on the remote control can be used to scroll back and forth through pages when projecting a PowerPoint presentation.

Once the connection has been made, the mouse pointer can be operated as follows.

Moving the mouse pointer

Press the [▲], [▼], [◀] or [▶] button to move the mouse pointer in the direction of the button pressed.

Left click

Press the [Enter] button.
If you press the [Enter] button twice in rapid succession, it has the effect of a double-click.

Right click

Press the [ESC] button.

Drag and drop

While holding down the [Enter] button, press the [▲], [▼], [◀] or [▶] button to drag items. Release the [Enter] button to drop the items being dragged at the desired position.

TIP

- *If the mouse button settings have been reversed at the computer, the operation of the remote control buttons will also be reversed.*
- *The wireless mouse function cannot be used while a configuration menu or help menu is being displayed or while the E-Zoom function is being used.*

Connecting to an External Monitor

Images can be viewed on an external computer monitor at the same time they are being projected by the projector. Use the cable that is provided with the computer monitor to connect the Monitor Out port at the rear of the projector to the monitor.

TIP

- *Video images cannot be output to an external monitor.*
- *The setting gauge for keystone correction and the configuration menus and help menus are not output to the external monitor.*

CAUTION

When connecting the projector to other video sources, take the following precautions.

- Turn off the power for both the projector and the video source before connecting them. If the power for either device is on at the time of connection, damage may result.
- Check the shapes of the cable connectors and the device ports before making the connections. If you try to force a connector to fit a device port with a different shape or number of terminals, a malfunction or damage to the connector or port may result.

Projecting **Composite Video** Images

Use the accessory A/V cable to connect the video source to the Video port at the rear of the projector.

TIP

If more than one external component is connected to the projector, use the [Source] button on the projector's control panel or the [S-Video/Video] button on the remote control to select the Video port as the input source. p.28

Projecting **S-Video** Images

Use a S-Video cable (commercially-available) to connect the video source to the S-Video port at the rear of the projector.

TIP

If more than one external component is connected to the projector, use the [Source] button on the projector's control panel or the [S-Video/Video] button on the remote control to select the S-Video port as the input source. p.28

Projecting Component Video Images

Use the optional component video cable to connect the video source to the Computer/Component Video port at the rear of the projector. See "Appendices: Optional Accessories" [p.84](#)

TIP

- After projection starts, change the "Input Signal" setting in the "Video" menu to either "Component Video (YCbCr)" or "Component Video (YPbPr)" to match the signals from the video equipment. [p.48](#)
- If more than one external component is connected to the projector, use the [Source] button on the projector's control panel or the [Computer] button on the remote control to set the input source to "Component Video (YCbCr)" or "Component Video (YPbPr)", depending on the type of signal being input. [p.28](#)

Projecting RGB Video Images

RGB video is used when RGB signals that have copy protection added are input and projected. Use the accessory computer cable to connect the video source to the Computer/Component Video port on the rear of the projector.

TIP

- After projection starts, change the "Input Signal" setting in the "Video" menu to "Computer". [p.46](#)
- For a RGB connection, a commercially available adapter or converter cable might be required.

Playing Sound from the Video Equipment

The projector has a single built-in speaker with a maximum output of 1 W. You can output composite video and S-Video sound through the projector's built-in speaker by connecting the video equipment's audio output port to the Audio 2 port (RCA/monaural) at the rear of the projector using the A/V cable that is included with the projector.

If you would like to output sound from a component video and RGB video that is being used as the source for image signals via the Computer/Component Video port, refer to "Playing Sound from the Computer".

☛ p.18

Use the following procedure to adjust the volume of the sound output.

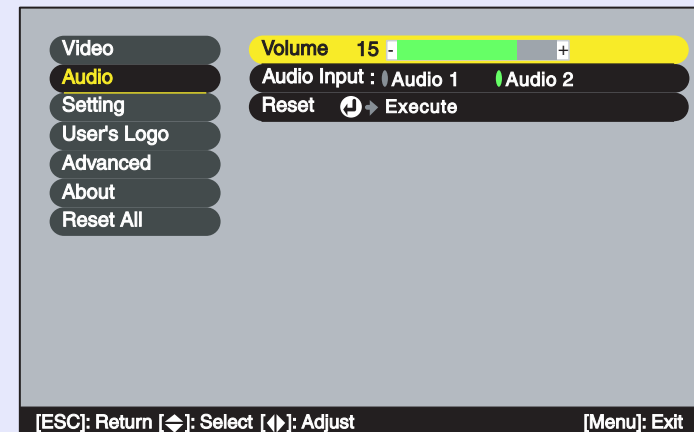

PROCEDURE

1 Press the [Menu] button on the remote control, and then select "Volume" from the "Audio" menu.

For details on this operation, refer to "Using the Configuration Menus". ☛ p.57

2 Use the [Left] and [Right] buttons to adjust the volume. The volume is increased or reduced each time a button is pressed.

3 After making the adjustment, press the [Menu] button to exit the configuration menu.

Basic Operations

This chapter describes basic operations such as turning projection on and off and adjusting the projected images.

Turning On the Projector.....	26	Adjusting the Image Quality.....	35
• Connecting the Power Cable	26	• Adjusting Computer Images	35
• Turning On the Power and Projecting Images	27	• Automatic Setup	35
Turning Off the Projector.....	29	• Adjusting the Tracking	36
Adjusting the Screen Image	31	• Adjusting the Sync	37
• Adjusting the Image Size	31	• Selecting the Colour Mode.....	38
• Focusing the Screen Image	31		
• Adjusting the Image Angle and Automatic Keystone Correction Function	32		
• Manually Correcting Keystone Distortion.....	34		

Turn on the power to start projecting images.

CAUTION

Be sure to read the separate Safety Instructions/World-Wide Warranty Terms before projecting images.

Connecting the Power Cable

PROCEDURE

1 Check that the power is turned off for the projector and all components connected to the projector.

2 Connect the computer or other video source to the projector. [p.16](#), [p.22](#)

3 Remove the lens cover.
Hook your finger under the top of the lens cover and pull to remove it.

4 Connect the accessory power cable to the projector.

Check that the power cable connector is facing the same way as the power inlet on the projector, and then insert the power cable connector securely into the projector.

5 Connect the other end of the power cable to an earthed electrical outlet.

Wait until the Power indicator lights orange.

TIP

The projector's control panel and remote control buttons cannot be operated while the Power indicator is flashing orange.

Turning On the Power and Projecting Images

PROCEDURE

- 1 Check that the Power indicator has stopped flashing and is lit orange.

- 2 Turn on the power for all equipment connected to the projector.

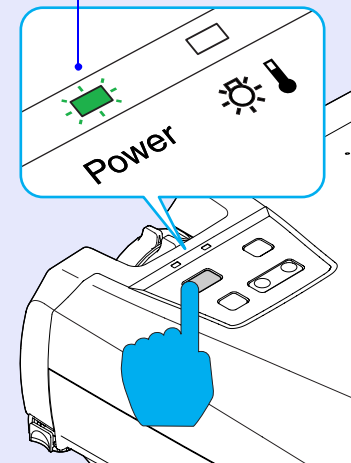

For a video source, press the [Play] button at the video source to start playback if necessary.

- 3 Press the [Power] button on either the projector's control panel or the remote control to turn on the power for the projector.

The Power indicator flashes green. After a short period it stops flashing and lights steadily, and projection starts.

Wait until the Power indicator lights green (it normally takes about 40 seconds to change).

Changes from flashing to lit green

Remote control

TIP

- The [Power] button on the projector's control panel and on the remote control cannot be operated while the Power indicator is flashing green.
- Depending on the settings, the message "No-Signal." may appear. See "Setting" - "No-Signal Msg." [p.50](#)
- When projection starts, images will initially be projected at the "High" brightness setting, even when "Brightness Control" in the configuration menu is set to "Low". Approximately two minutes after projection starts, the message "Brightness Control: Switched into "Low" mode." will be displayed and the brightness will return to the "Low" setting. See "Advanced" - "Brightness Control" [p.53](#)

4 If more than one signal source has been connected, use the projector's control panel or the remote control buttons to select the port which the signal source that you would like to use is connected to, while referring to the following table.

Port	Button to press		Display at top-right of screen
	Projector	Remote control	
Computer/ Component Video	The image source changes each time [Source] is pressed.	[Computer]	Computer * Component Video (YCbCr▶▶) * Component Video (YPbPr▶▶) *
S-Video		[S-Video/Video]	S-Video
Video			Video

* The items selected using the "Input Signal" command in the "Video" menu will appear.

TIP

- If only one signal source has been connected, the signals from that source will be projected without needing to press one of the buttons from the previous table.
- If the "No-Signal." message does not disappear, check the connections again.
- If a laptop computer or a computer with an LCD screen has been connected to the projector, the images may not be projected straight away. After starting projection, check that the computer has been set up to output signals externally. The following table shows examples of how to toggle output settings. For details, refer to the section of the documentation provided with your computer under a heading such as "External output", "Connecting an external monitor" or similar.

NEC	Panasonic	Toshiba	IBM	Sony	Fujitsu	Macintosh
[Fn]+[F3]	[Fn]+[F3]	[Fn]+[F5]	[Fn]+[F7]	[Fn]+[F7]	[Fn]+[F10]	After startup, change the Control Panel adjustments so that Mirroring is active

- If the same still picture is projected for a long period of time, the projected image may become burned in on the computer screen. You should avoid leaving the same image displayed for long periods.

Follow the procedure below to turn off the power of the projector.

PROCEDURE

1 Turn off the power for the signal sources that are connected to the projector.

Check that the power for all connected components has been turned off.

2 Press the [Power] button on either the projector's control panel or the remote control.

The following confirmation message will appear.

Power OFF?

Yes : Press  button

No : Press any other button

If you do not want to turn off the power, press any button except the [Power], [Page down] or [Page up] button.

If you do not press any button, the message will disappear automatically after seven seconds. (The power will not turn off at this time.)

3 Press the [Power] button once more.

The lamp will switch off. The Power indicator will flash orange and [cool-down](#) will start.

The cool-down period lasts for about 20 seconds.

When cool-down is complete, the Power indicator lights orange.

Stops flashing and lights orange

TIP

The projector's control panel and remote control buttons cannot be operated while the Power indicator is flashing orange. Wait until it lights steadily.

- 4 Unplug the power cable from the electrical outlet.

CAUTION

Do not disconnect the power cable from the outlet while the Power indicator is still flashing orange, otherwise it may result in errors in projector operation and reduce the lamp unit operating life.

- 5 **Attach the lens cover.**

Attach the lens cover to the lens when not using the projector, in order to stop the lens from getting dusty or dirty.

You can correct and adjust the screen image in order to obtain the best possible picture.

Adjusting the Image Size

The size of the projected image is basically determined by the distance from the projector to the screen. [p.14](#)

The following procedures explain how to adjust the screen image once the projector itself has been set up.

TIP

The E-Zoom function lets you enlarge parts of the image. [p.43](#)

PROCEDURE

Turn the zoom ring on the projector to adjust the image.

The image can be enlarged in this way to 1.2 times the normal size.

If you would like to enlarge the image further, move the projector further away from the screen. [p.14](#)

Focusing the Screen Image

PROCEDURE

Turn the focus ring to adjust the image focus.

TIP

- *If the surface of the lens is dirty or misted over as a result of condensation, it may not be possible to adjust the focus correctly. If this happens, clean or de-mist the lens. [p.67, p.74](#)*
- *If the projector is positioned outside the normal projecting range of 89–1050 cm (2.9–34.4 ft.), it may not be possible to obtain the correct focus. If you have trouble obtaining the correct focus, check the projection distance.*

Adjusting the Image Angle and Automatic Keystone Correction Function

The projector should be set up so that it is as perpendicular to the screen as possible.

Seen from the side

Seen from above

If it is not possible to set up the projector so that it is perpendicular to the screen, it can be set up at a slight vertical angle instead. You can extend or retract the front adjustable feet to adjust the upward projection angle within a maximum range of 10°.

When the projector is tilted vertically, it will cause keystone distortion to appear in the image. However, the projector is equipped with an automatic keystone correction function that can automatically correct this keystone

distortion as long as the vertical angle of tilt is within a range of approximately 15°*. Automatic keystone correction is carried out approximately one second after the projector's power is turned on and the projector has been positioned.

Approx. 15° above

Approx. 15° below

* This value applies when the zoom ring is turned to the maximum "T" setting. If the zoom ring is turned to the "W" setting, the available angle of tilt for automatic adjustment will become smaller.

TIP

- Automatic keystone correction is not carried out when the "Rear" or "Ceiling" commands in the "Advanced" menu are set to "ON".
- If you would like to make further adjustments after automatic keystone correction has been carried out, you can use the [keystone] button on the projector's control panel. [p.34](#)
- When keystone correction is carried out, the projected image will become smaller.
- If the images become uneven in appearance after keystone correction is carried out, decrease the sharpness setting. [p.45](#), [p.47](#)
- If automatic keystone correction is not required, set "Auto Keystone" in the "Setting" menu to "OFF". [p.50](#)

TIP

If the projector is tilted horizontally, turn the bases of the front adjustable feet to adjust the angle.

PROCEDURE

While pressing the two foot adjust buttons at either side, lift up the front of the projector so that the front adjustable feet can extend.

Extend the front adjustable feet until the desired angle is obtained, and then release the foot adjust buttons.

To retract the front adjustable feet, gently push down on the projector while pressing the two foot adjust buttons.

Manually Correcting Keystone Distortion

The projector is provided with an automatic keystone correction function which detects the vertical angle of the projector and carries out keystone correction automatically. If further correction adjustment is required after automatic keystone correction has been carried out, use the [Keystone] buttons on the projector's control panel to make the adjustment.

PROCEDURE

TIP

- When keystone correction is carried out, the projected image will become smaller.
- If the images become uneven in appearance after keystone correction is carried out, decrease the sharpness setting. [p.45, p.47](#)
- Keystone correction can also be carried out using the configuration menu. [p.50](#)
- If the value displayed in the gauge on the screen stops changing when keystone correction is being carried out, it indicates that the limit for keystone correction has been exceeded. Check that the projector has not been set up at an angle which exceeds the proper limit.

The quality of the screen images can be adjusted as follows.

Adjusting Computer Images

■ Automatic Setup

Automatic setup detects the status of the signals coming from the connected computer, and automatically adjusts these signals so that the optimum images can be obtained. It involves adjustment of the following three items: optimum images can be obtained. It involves adjustment of the following three items:

[Tracking▶▶](#), Position and [Sync▶▶](#).

TIP

- *If "Auto Setup" in the "Video" menu is set to "OFF" (the default setting for this item is "ON"), automatic setup is not carried out. If you press the [Auto] button on the remote control while computer signals are being projected, adjustment will then be carried out.*

Remote control

- *If you press the [Auto] button while the E-Zoom or Freeze function is being used or while a configuration menu or help menu is being displayed, the function will be cancelled when you press the [Auto] button, and then the adjustment will be carried out.*
- *Sometimes the signals may not be adjusted correctly depending on the type of signals being output by the computer. In such cases, use the configuration menu commands to adjust the tracking and sync settings manually. 🖱️ [p.36](#), [p.37](#)*

Adjusting the Tracking

If vertical stripes appear in the projected images, and this cannot be fixed using automatic setup, you will need to adjust the [tracking](#) manually using the following procedure.

PROCEDURE

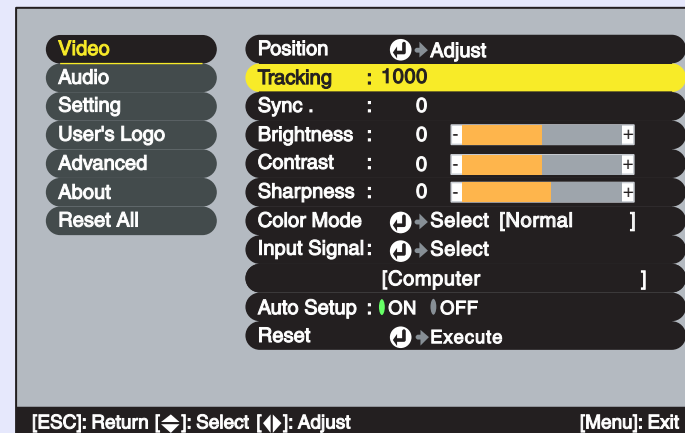

1 Press the [Menu] button on the remote control, and then select "Tracking" from the "Video" menu.

For details on this operation, refer to "Using the Configuration Menus". [p.57](#)

2 Press the [←] and [→] buttons to set the tracking value to a value that causes the vertical stripes to disappear from the image.

The tracking value increases or decreases each time a button is pressed.

3 After making the adjustment, press the [Menu] button to exit the configuration menu.

TIP

The image will flash when continuous tracking adjustment is carried out, but this is normal.

Adjusting the Sync

If flickering, fuzziness or interference appear in images that are input from the computer, and this cannot be fixed using automatic setup, you will need to adjust the [sync](#) manually using the following procedure.

PROCEDURE

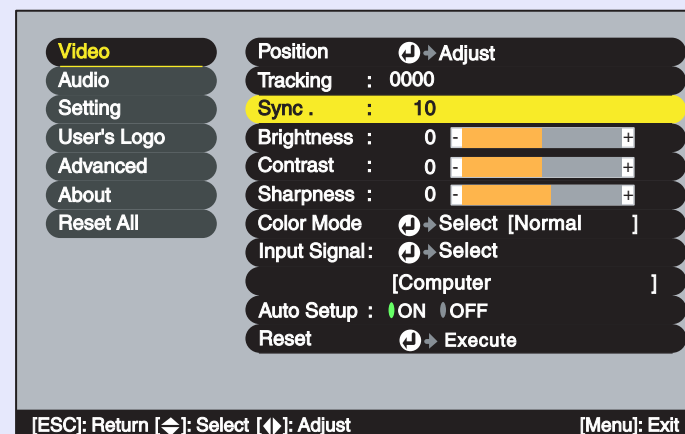

- 1 Press the [Menu] button on the remote control, and then select "Sync." from the "Video" menu.

For details on this operation, refer to "Using the Configuration Menus". [p.57](#)

- 2 Press the [←] and [→] buttons to set the sync value to a value that causes the flickering, fuzziness or interference to disappear from the image.

The sync value increases or decreases each time a button is pressed.

- 3 After making the adjustment, press the [Menu] button to exit the configuration menu.

TIP

- If you adjust the sync without adjusting the tracking first, it will not be possible to get the best adjustment results. Incorrect tracking adjustment may not be noticeable with some types of picture. However, pictures with lots of lines and shading will tend to show incorrect tracking adjustments more clearly, so be sure to check the tracking adjustment first.
- It may also be possible to fix flickering and fuzziness by adjusting the brightness, [contrast](#), sharpness and keystone correction settings.

Selecting the Colour Mode

The following six preset colour modes are available for use depending on the characteristics of the images that are being projected. You can easily obtain the optimum image quality simply by selecting the colour mode that corresponds to the projected images. The brightness of the images will vary depending on which colour mode is selected.

Mode	Application
sRGB	Images conform to the sRGB colour standard. If the connected source has an sRGB mode, set both the projector and the connected signal source to sRGB.
Normal	Brightness is emphasised. For presentation in bright rooms.
Meeting	Images are modulated using their original tints, with no colour enhancement.
Presentation	For presentations in dark rooms.
Theatre	Movie images are optimised using natural tints.
Game	Brightness is emphasised. Ideal for playing video games in bright rooms.

The current setting appears in the top-right corner of the screen each time the colour mode is changed.

The default setting for the colour mode is as follows.

When computer images are being input: "Normal"

When [component video](#), composite video or S-Video signals are being input: "Theatre"

TIP

The colour mode can also be set using the "Color Mode" command in the "Video" menu. [p.45](#), [p.47](#)

PROCEDURE

The color mode changes as follows each time the [Color Mode] button on the remote control is pressed.

Normal → Meeting → Presentation → Theatre → Game → sRGB ...

Remote control

Advanced Operations

This chapter describes functions for enhancing the projection of images, and how to use the configuration menus.

Functions for Enhancing Projection	40
• A/V Mute.....	40
• Freeze	41
• Wide-screen Projection of Images from Video Equipment (Changing the Aspect Ratio)	42
• E-Zoom.....	43

Using the Configuration Menu Functions.....	44
• List of Functions	45
• "Video" Menu	45
• "Audio" Menu	49
• "Setting" Menu	50
• "User's Logo" Menu	52
• "Advanced" Menu	53
• "About" Menu	55
• "Reset All" Menu	56
• Using the Configuration Menus	57

This section describes the various useful functions that can be used to enhance presentations.

A/V Mute

This function momentarily pauses the image and sound.

For example, it can be used when you do not want to show details of operations such as selecting different files while computer images are being projected.

However, if you use this function when projecting moving images, the images and sound will still continue to be played back by the source, and you cannot return to the point where the mute function was activated.

PROCEDURE

Press the [A/V Mute] button on the remote control.

The image and sound will then be paused.

Press the [A/V Mute] button on the remote control to continue normal projection.

Remote control

You can use the "A/V Mute" function in the "Setting" menu to set the screen appearance when the images and sound have been paused to any one of the following three settings. [p.50](#)

Solid black

Default setting

Solid blue

User's logo

TIP

- *The default user's logo is the EPSON logo. To change the user's logo, you need to record your own logo. [p.81](#)*
- *When the A/V Mute function is being used, the "Brightness Control" setting in the "Advanced" menu will automatically change to "Low". When the A/V mute function is cancelled, the "Brightness Control" setting will return to the original setting.*

Freeze

This function pauses only the projected images. The sound keeps playing without pausing.

The image source will still be playing back the images even while projection is paused, and so it will not be possible to resume projection from the point where it was paused.

PROCEDURE

Press the [Freeze] button on the remote control.

The images will then be paused.

To continue projecting the images, either press the [Freeze] button again or press the [ESC] button.

Remote control

TIP

- *Pressing the [Freeze] button also clears configuration menu displays and help messages.*
- *The freeze function still works while the E-Zoom function is being used.*
However, in this case the freeze function can only be cancelled by pressing the [Freeze] button.

Wide-screen Projection of Images from Video Equipment (Changing the Aspect Ratio)

This function changes the [aspect ratio](#) of images from 4:3 to 16:9 when component video images (YCbCr and YPbPr) or video images (S-Video or composite video) are being projected. Images which have been recorded in digital video or onto DVDs can be viewed in 16:9 wide-screen format.

When images in [squeeze mode](#) are projected at 4:3

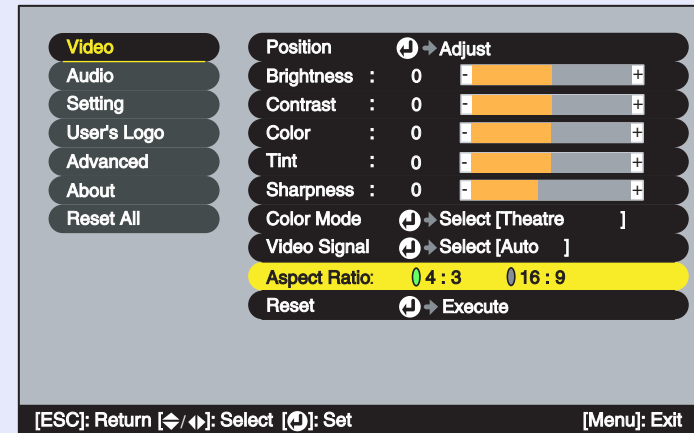

When images in squeeze mode are projected at 16:9

PROCEDURE

1 Press the [Menu] button on the remote control, and then select "Aspect Ratio" from the "Video" menu.

For details on this operation, refer to "Using the Configuration Menu". [p.57](#)

2 Press the [◀] and [▶] buttons to set the aspect ratio to either "4:3" or "16:9", and then press the [Enter] button.

3 After making the adjustment, press the [Menu] button to exit the configuration menu.

E-Zoom

This function lets you enlarge and reduce a part of projected images such as graphs and tables.

PROCEDURE

1 Press the [E-Zoom ⊕] button on the remote control.

A cursor (cross) indicating the centre point for the area to be enlarged will appear on the screen.

Remote control

2 Move the cross to the area of the image that is to be enlarged or reduced.

Press the [▲], [▼], [◀] and [▶] buttons on the remote control to move the cross.

3

When [⊕] is pressed, the image is enlarged with the cross as its centre. When [⊖] is pressed, the enlarged picture is then reduced.

The enlargement ratio will appear at the bottom-right of the screen.

You can scroll around the image by pressing the [▲], [▼], [◀] and [▶] buttons.

To cancel the E-Zoom, press the [ESC] button.

TIP

The selected area can be enlarged to between 1–4 times, in 25 steps of ×0.125.

The configuration menus can be used to carry out a variety of settings and adjustments.

The menus have a hierarchical structure, with a main menu that is divided into sub-menus, which are further divided into other sub-menus.

The remote control is used to operate the menus. Refer to "Using the Configuration Menus" [p.57](#) for details on using the menus.

List of Functions

"Video" Menu

- The functions in the "Video" menu apart from "Input Signal", "Auto Setup" and "Video Signal" cannot be adjusted while no image signal is being input.
- The functions which appear in the "Video" menu will change depending on the type of input source being used for the image signal. Functions which are not available in the "Video" menu for a particular input source cannot be adjusted.

Computer (Analogue-RGB)/RGB video

Sub-menu	Function	Default
Position	Moves the image display position vertically and horizontally. • Press the [Enter] button and make the adjustment using the display position adjustment sub-menu that appears.	Depends on connection
Tracking ▶▶	Adjusts computer images when vertical stripes appear in the images.	Depends on connection
Sync ▶▶	Adjusts computer images when flickering, fuzziness or interference appear in the images. • Flickering and fuzziness may also appear when the brightness, contrast ▶▶, sharpness or keystone settings are adjusted. • You can obtain the best results if you adjust the tracking first and then adjust the sync.	Depends on connection
Brightness	Adjusts the image brightness.	Median value (0)
Contrast ▶▶	Adjusts the difference between light and shade in the images.	Median value (0)
Sharpness	Adjusts the image sharpness.	Median value (0)
Color Mode	Corrects the vividness of the image colour. The settings can be saved separately for each type of source (computer or video source). You can select from six different quality settings depending on the surroundings. • sRGB ▶▶: Images conform to the sRGB standard. If set to sRGB, the colour temperature for the "Color Adjustment" command in the "Advanced" menu will be set to 6500K. • Normal: Brightness is emphasised. For presentation in bright rooms. • Meeting: Images are modulated using their original tints, with no colour enhancement. • Presentation: For presentations in dark rooms. • Theatre: Movie images are optimised using natural tints. • Game : Brightness is emphasised. Ideal for playing video games in bright rooms.	Normal

Sub-menu	Function	Default
Input Signal	Selects the input signal in accordance with the source being used. •When projecting computer images, select "Computer".	Depends on connection
Auto Setup	Selects whether the automatic adjustment function for automatically optimising images when the input source is changed is turned "ON" or "OFF".	ON
Reset	Resets all adjustment values for the "Video" menu functions except for the "Input Signal" setting to their default settings. •Press the [Enter] button to display the confirmation screen, and select "Yes". •Select "Reset All" to return all menu settings to their default settings.  p.56	-

Component ([YCbCr](#), [YPbPr](#))

Video (S-Video, Composite video)

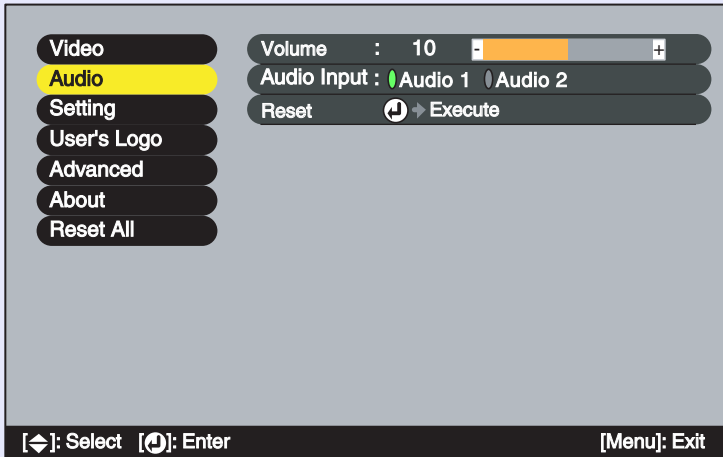

Sub-menu	Function	Default
Position	Moves the image display position vertically and horizontally. •Press the [Enter] button and make the adjustment using the display position adjustment sub-menu that appears.	Depends on connection
Brightness	Adjusts the image brightness.	Median value (0)
Contrast	Adjusts the difference between light and shade in the images.	Median value (0)
Color	(Not available for RGB video) Adjusts the colour intensity for the images.	Median value (0)
Tint	(Not available for RGB video) (Adjustment is only possible when component video or NTSC signals are being input.) Adjust the image tint.	Median value (0)
Sharpness	Adjusts the image sharpness.	Median value (0)
Color Mode	Corrects the vividness of the image colour. The settings can be saved separately for each type of source (computer or video source). You can select from six different quality settings depending on the surroundings. • sRGB : Images conform to the sRGB standard. If set to sRGB, the colour temperature for the "Color Adjustment" command in the "Advanced" menu will be set to 6500K. •Normal: Brightness is emphasised. For presentation in bright rooms. •Meeting: Images are modulated using their original tints, with no colour enhancement. •Presentation: For presentations in dark rooms. •Theatre: Movie images are optimised using natural tints. The black & white extension function operates so that differences in colour gradations (darkness and lightness of colours) are accentuated even for images that are very dark or very bright, to make them easier to view. •Game : Brightness is emphasised. Ideal for playing video games in bright rooms.	Theatre

Sub-menu	Function	Default
Input Signal	(Adjustment is only possible when component video signals are being input.) Selects the input signal in accordance with the source being used.	Depends on connection
Video Signal	(Adjustment is only possible when composite video/S-Video signals are being input.) Sets the video signal format. <ul style="list-style-type: none"> • Press the [Enter] button, and choose the setting from the video signal format selection sub-menu which appears. • When set to "Auto", the video signal format is set automatically. 	Auto
Aspect Ratio »	Sets the aspect ratio for projected images.	Depends on connection
Reset	Resets all adjustment values for the "Video" menu functions except for the "Input Signal" and "Video Signal" setting to their default settings. <ul style="list-style-type: none"> • Press the [Enter] button to display the confirmation screen, and select "Yes". • Select "Reset All" to return all menu settings to their default settings.  p.56 	-

■ "Audio" Menu

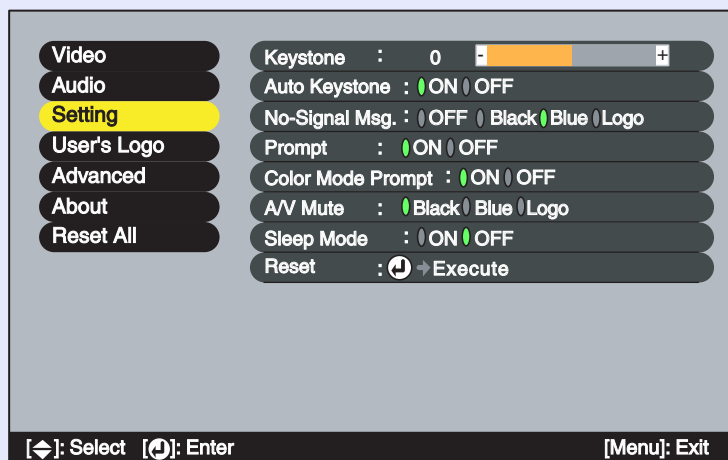

Sub-menu	Function	Default
Volume	Adjusts the volume.	Median value (10)
Audio Input	Selects the input source (port) for audio signals at the rear of the projector. The default setting varies depending on the type of signal being input (for computer, component video and RGB video input signals: Audio 1; for video input signals: Audio 2). Therefore, if audio signals are being input to a different port from the default port, you will need to select the audio signal input source.	Depends on connection
Reset	Resets all adjustment values for the "Audio" menu functions to their default settings. • Press the [Enter] button to display the confirmation screen, and select "Yes". • Select "Reset All" to return all menu settings to their default settings. p.56	-

TIP

The "Audio" menu settings are saved individually for each input signal source.

■ "Setting" Menu

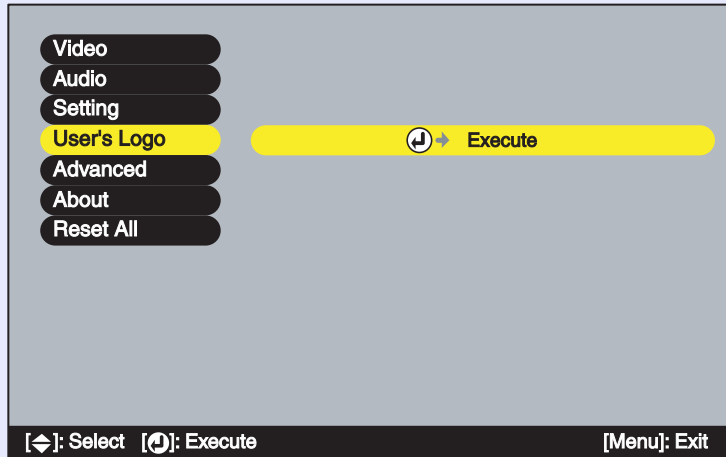

Sub-menu	Function	Default
Keystone	<p>Corrects vertical keystone distortion in images.</p> <ul style="list-style-type: none"> •When keystone correction is carried out, the projected image will become smaller. •If the images become uneven in appearance after keystone correction is carried out, decrease the sharpness setting. 	Median value (0)
Auto Keystone	<p>Sets the function for automatically correcting keystone distortion when the angle of the projector has been adjusted to "ON" or "OFF". This function is only enabled when the "Rear Proj. " and "Ceiling" commands in the "Advanced" menu are set to "OFF". If either "Rear Proj. " or "Ceiling" is set to "ON", this menu cannot be selected.</p>	ON
No-Signal Msg.	<p>Sets the message status and background colour at times such as when no image signal is being input. When set to "OFF", the background colour becomes black and no message is displayed.</p> <ul style="list-style-type: none"> •To change the user's logo, you need to record your own logo. p.81 	Blue
Prompt	<p>Sets whether the input signal name is displayed on the screen or not when the input signal is changed.</p>	ON
Color Mode Prompt	<p>Sets whether the colour mode prompt is displayed on the screen or not when the colour mode is changed.</p>	ON
A/V Mute	<p>Sets the screen status when the [A/V Mute] button on the remote control is pressed.</p> <ul style="list-style-type: none"> •To change the user's logo, you need to record your own logo. p.81 	Black
Sleep Mode	<p>Sets the energy saving operation when no signal is being input.</p> <ul style="list-style-type: none"> •When set to "ON", projection stops automatically and then after the cool-down period is finished, the projector changes to sleep mode if no operations are carried out for 30 minutes while the "No-Signal." message is being displayed. (The Power indicator lights orange.) •Projection starts again when the [Power] button on the projector's control panel or the remote control is pressed. 	OFF

Sub-menu	Function	Default
Reset	Resets all adjustment values for the "Setting" menu functions to their default settings. <ul style="list-style-type: none">• Press the [Enter] button to display the confirmation screen, and select "Yes".• Select "Reset All" to return all menu settings—including settings for the "Video" and "Audio" menus—to their default settings.  p.56	-

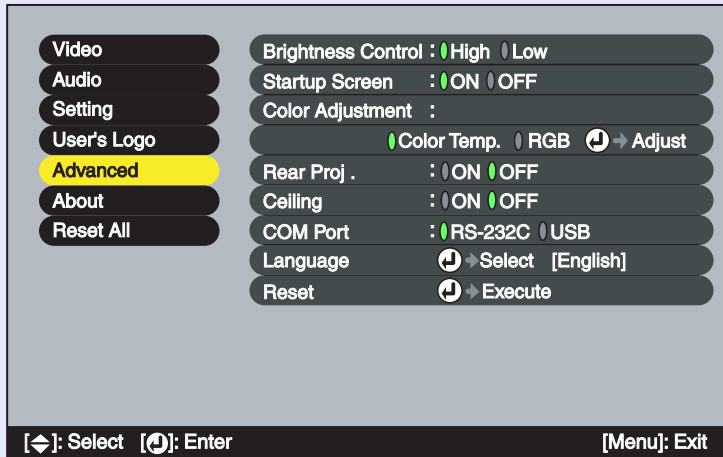

■ "User's Logo" Menu

Sub-menu	Function	Default
Execute	Records a user's logo. p.81 •Press the [Enter] button and follow the procedure appearing on the screen.	EPSON logo

■ "Advanced" Menu

Sub-menu	Function	Default
Brightness Control	This lets you set the lamp brightness to one of two settings. When set to "Low", the lamp brightness is darker than for the "High" setting. When projection starts, images will initially be projected at the "High" brightness setting, even when set to "Low". Approximately two minutes after projection starts, the message "Brightness Control: Switched into "Low" mode." will be displayed and the brightness will return to the "Low" setting.	High
Startup Screen	Sets whether the startup screen is displayed or not. •To change the user's logo, you need to record your own user's logo.	ON
Color Adjustment	Adjusts the colour temperature and intensity of each RGB (red, green, blue) color for each input source. •Color Temp.: Lets you adjust bright colours within a range from reddish tinges to bluish tinges. If the colour temperature is lower, colours appear reddish and color tones appear softer. If the colour temperature is higher, colours appear bluish and colour tones appear sharper. Press the [Enter] button and make the adjustment in the colour adjustment sub-menu that appears. •RGB : Press the [Enter] button, select "R" (red), "G" (green) or "B" (blue) and make the adjustment in the colour adjustment sub-menu that appears. (This item cannot be selected if "sRGB" has been selected as the "Color Mode" setting in the "Video" menu.)	Color Temp.: Depends on connection
Rear Proj.	Use when projecting images from behind a translucent screen. When set to "ON", the projected images are horizontally reversed.	OFF
Ceiling	Use when installing the projector to a ceiling. When set to "ON", the projected images are horizontally and vertically reversed.	OFF

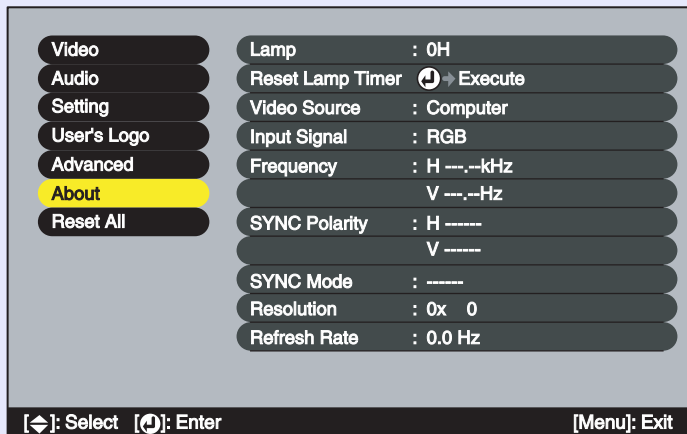

Sub-menu	Function	Default
COM Port	<p>This can be set to either "RS-232C" or "USB", depending on the port that is being used for communication with a computer.</p> <p>Be sure to set to "USB" when using the "EMP Link21L" utility software.</p> <p>When this setting is changed, turn off the power momentarily, and when the cool-down period has finished, turn the power back on again. The new setting will be applied after the power turns back on.</p>	RS-232C
Language	<p>Sets the language for message displays.</p> <ul style="list-style-type: none"> • Press the [Enter] button and select the language from the selection menu that appears. 	English
Reset	<p>Resets all adjustment values for the "Advanced" menu functions except for the "Language" setting to their default settings.</p> <ul style="list-style-type: none"> • Press the [Enter] button to display the confirmation screen, and select "Yes". • Select "Reset All" to return all menu settings including settings for the "Video" and "Audio" menus to their default settings. p.56 	-

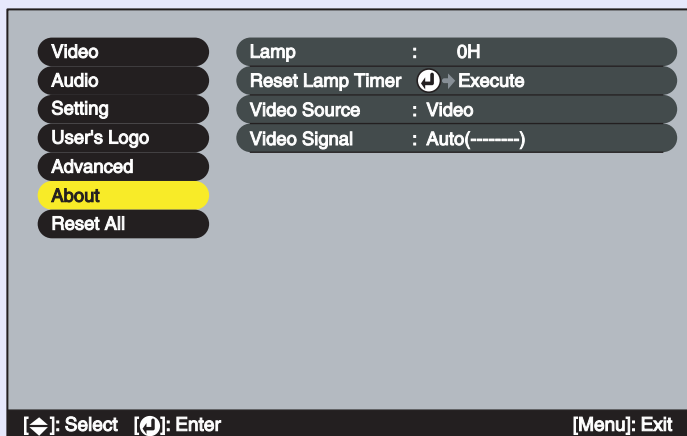

"About" Menu

- The "About" menu shows the setting details for the current image source.
- The "Lamp" item appears as 0H for 0–10 hours, and after that, it appears in units of 1 hour.

Computer/RGB video/Component video
(Analogue-RGB, [YCbCr](#), [YPbPr](#))

Video (S-Video, Composite video)

Sub-menu	Function	Default
Lamp	Displays the cumulative lamp operating time. •When the lamp warning period is reached, the display characters appear in red.	0H
Reset Lamp Timer	Initialises the lamp operating time. When this command is selected, the cumulative lamp operating time is reset to the initial default value.	-
Video Source	Displays the input source which is currently being projected.	
Input Signal	Displays the input signal settings. (Does not appear when the input source is composite video or S-Video.)	
Video Signal	Shows the video signal format. (Does not appear when the input source is computer, component video or RGB video.)	-
Frequency	Displays the horizontal and vertical scanning frequencies. (Does not appear when the input source is composite video or S-Video.)	-
SYNC Polarity	Displays the sync polarity. (Does not appear when the input source is composite video or S-Video.)	-
SYNC Mode	Displays the sync attributes. (Does not appear when the input source is composite video or S-Video.)	-
Resolution	Displays the input resolution. (Does not appear when the input source is composite video or S-Video.)	-
Refresh Rate	Displays the refresh rate. (Does not appear when the input source is composite video or S-Video.)	-

■ "Reset All" Menu

Sub-menu	Function	Default
Execute	<p>Resets all items in all menus to their default settings.</p> <ul style="list-style-type: none"> • Press the [Enter] button to display the confirmation screen, and select "Yes". • Select "Reset" in an individual menu to reset only the settings for the items in each sub-menu. • The "Input Signal", "Video Signal", "User's Logo", "Lamp" and "Language" settings will not return to their default settings. 	-

Using the Configuration Menus

The configuration menus can be operated using the remote control only.

PROCEDURE

1 Press the [Menu] button on the remote control.

The configuration menu appears.

Remote control

2 Select a menu item.

Press the [▲] or [▼] button to move to an item to be selected.

Video

Audio

Setting

User's Logo

Advanced

About

Reset All

3 Confirm the selection.

Press the [Enter] button to confirm the selection of a menu item. The selected sub-menu will then be displayed.

```

Brightness Control : High Low
Startup Screen    : ON OFF
Color Adjustment  :
                  : Color Temp. RGB Adjust
Rear Proj.       : ON OFF
Ceiling          : ON OFF
COM Port         : RS-232C USB
Language         : Select [English]
Reset            : Execute
  
```

4 Select a sub-menu item.

Press the [▲] or [▼] button to move to an item to be selected.

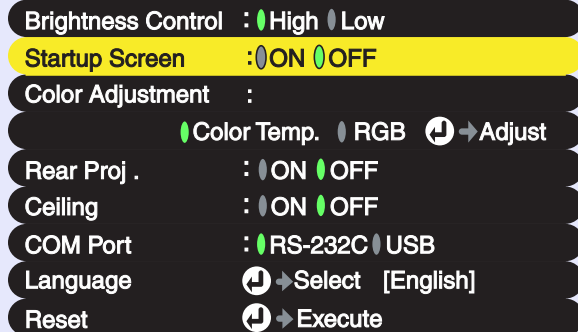

The items appearing in the "Video" menu and the "About" menu will vary depending on the type of input source being projected.

```

Brightness Control : High Low
Startup Screen    : ON OFF
Color Adjustment  :
                  : Color Temp. RGB Adjust
Rear Proj.       : ON OFF
Ceiling          : ON OFF
COM Port         : RS-232C USB
Language         : Select [English]
Reset            : Execute
  
```

5 Select a setting value.

Press the [◀] and [▶] buttons to change the setting value.

For items which are currently set, ● next to the setting appears in green. If you use the [◀] and [▶] buttons to select an item to be set, the ● will appear in orange. After making the selection, press the [Enter] button to accept the setting. When the setting is accepted, the ● changes to green.

TIP

- *Sub-menu items which cause another sub-menu to be displayed when they are selected have ↻ after them. If you select such menu items and press the [Enter] button, you can then change the settings in the next sub-menu which appears.*
- *Refer to "List of Functions" for details on the functions of each menu item. 📖 p.45*

6 Select other menu items in the same way.

Repeat steps 2 to 5 to change the setting for other menu items. To return to a previous menu, press the [ESC] button.

7 Close the menu.

Press the [Menu] button.

Troubleshooting

This chapter describes how to identify problems and what to do if a problem is found.

Using the Help.....	60
When Having Some Trouble.....	62
• Power Indicator	62
• ⚠(Warning) Indicator.....	63
When the Indicators Provide No Help	65

If a problem occurs with the projector, the Help function uses on-screen displays to assist you in solving the problem. It uses a series of menus in a question and answer format.

PROCEDURE

- 1 Press the [Help] button on the projector's control panel.**

The help menu will be displayed.

Projector

- 2 Select a menu item.**

If using the control panel, the [▼ Select ▲] buttons function as the up and down keys.

If using the remote control, press the [▲] and [▼] buttons to select an item.

Projector

Remote control

- 3 Confirm the selection.**

Press the [Enter] button to confirm the selection of a menu item.

Projector

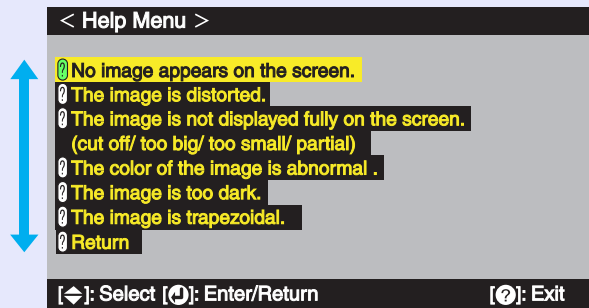

Remote control

4 Repeat the operations in steps 2 and 3 to proceed through the menu to more detailed items.

You can exit the help menu at any time by pressing the [Help] button.

TIP

If the Help function does not provide a solution to the problem, refer to "When Having Some Trouble" [p.62](#) or "When the Indicators Provide No Help" [p.65](#).

If you are having a problem with the projector, first check the projector's indicators.

The projector is provided with the following two indicators. These indicators alert you to problems with projector operation.

The following tables show what the indicators mean and how to remedy problems that they indicate.

Power Indicator

■ : lit ■■■ : flashing

Status	Cause	Remedy or Status
Orange ■	Standby condition	(Not abnormal) The power cable should only be disconnected when the projector is in this condition. Press the [Power] button to start projection. p.26
Orange ■■■	Cool-down in progress	(Not abnormal) • Please wait. The cool-down period lasts about 20 seconds. • You cannot operate the [Power] button during cool-down. Press the button again after cool-down ends. p.29
Green ■	Projection in progress	(Not abnormal) p.27
Green ■■■	Warm-up in progress	(Not abnormal) Please wait. Warm-up time is approximately 40 seconds. After warm-up is complete, the flashing green indicator changes to steady green. p.27

(Warning) Indicator

 : lit  : flashing

Status	Cause	Remedy or Status
Red 	High internal temperature (overheating)	<p>The lamp will turn off automatically and projection will stop. Wait for about 5 minutes without operating the projector. After about 5 minutes have elapsed, unplug the power cable and then check the following two points.</p> <ul style="list-style-type: none"> •Check that the air filter and air exhaust vent are clear, and that the projector is not positioned against a wall. ☞ p.14 •If the air filter is dirty, it should be cleaned. ☞ p.74 <p>When the power cable is plugged back in, the projector will return to its previous state, so press the [Power] button on either the projector's control panel or the remote control to turn it back on. If the projector continues to overheat even after the above points have been checked, or if the indicators show a problem when the power is turned back on, stop using the projector, disconnect the power cable from the electrical outlet, and contact your dealer or the nearest address provided at "International Warranty Conditions" in <i>Safety Instructions/World-Wide Warranty Terms</i>.</p>
Red  (0.5-second intervals)	Problem with lamp	<p>Disconnect the power cable from the electrical outlet and then remove the lamp and check if it is broken. If the lamp is not broken, reinstall it. Then reconnect the power cable and press the [Power] button on either the projector's control panel or the remote control to turn the power back on.</p> <p>If the indicators still show a problem, stop using the projector, disconnect the power cable from the electrical outlet, and contact your dealer or the nearest address provided at "International Warranty Conditions" in <i>Safety Instructions/World-Wide Warranty Terms</i>. ☞ p.77</p> <hr/> <p>If the lamp is broken replace by a new lamp, or contact your local dealer for further advise. If replacing the lamp yourself, be careful to avoid pieces of broken glass. (Projection cannot be carried out until the lamp is replaced.) ☞ p.77</p> <hr/> <p>Check that the lamp and the lamp cover are securely installed. If the lamp or lamp cover is not securely installed, the lamp will not switch on. ☞ p.77</p>
Red  (1-second intervals)	Internal problem	<p>Stop using the projector, disconnect the power cable from the electrical outlet, and contact your dealer or the nearest address provided at "International Warranty Conditions" in <i>Safety Instructions/World-Wide Warranty Terms</i>.</p>
Orange 	High-speed cooling in progress	<p>(This is not an abnormality, but if the temperature rises too high again, projection will stop automatically.)</p> <ul style="list-style-type: none"> •Set the projector up in a place which is well-ventilated, and so that the air filter and air exhaust vent are clear. ☞ p.14 •Clean the air filter. ☞ p.74

TIP

- *If the projector is not operating properly even though the indicators are all showing normal, refer to "When the Indicators Provide No Help" on the following page.*
- *If an indicator is showing a status which does not appear in the previous tables, contact your dealer or the nearest address provided at "International Warranty Conditions" in Safety Instructions/World-Wide Warranty Terms.*

If any of the following problems occur and the indicators do not offer a solution, refer to the pages given for each problem.

- No images appear [☛ p.65, p.66](#)
- Images are out of focus and distorted (not clear) [☛ p.67](#)
- Only part of the image is displayed (Large/small) [☛ p.69](#)
- The image colours are not right [☛ p.70](#)
- Images appear dark [☛ p.70](#)
- Images appear greenish [☛ p.71](#)
- Images appear purplish [☛ p.71](#)
- No sound can be heard [☛ p.71](#)
- The remote control does not work [☛ p.72](#)
- The power does not turn off [☛ p.72](#)

No images appear (Nothing at all appears)

 No images appear	Was the power turned off and then straight back on again?	After the power is turned off (during cool-down), the [Power] buttons on the projector's control panel and the remote control will not work. Wait until cool-down has finished. You can then use the [Power] buttons. ☛ p.29
	Is sleep mode active?	When sleep mode has been set to "ON", the lamp turns off automatically if no operations are carried out for 30 minutes while no image signal is being input. The Power indicator lights orange at this time. "Setting" - "Sleep Mode" ☛ p.50
	Have you pressed the [Power] button?	☛ p.27
	Has the image brightness been adjusted correctly?	"Video" - "Brightness" ☛ p.45, p.47
	Is A/V Mute mode active?	☛ p.40
	Is the projected image completely black?	Some input images, such as screen savers, may be completely black.
	Is an image signal being input?	If "No-Signal Msg. " in the "Setting" menu has been set to "OFF", no messages will be displayed. Set it to "Black" or "Blue" for messages to be displayed. If a message is displayed, refer to the item indicated. "Setting" - "No-Signal Msg. " ☛ p.50
Try resetting all of the current settings.	"Reset All" - "Execute" ☛ p.56	

No images appear (Messages do appear)

 <p>"Not Supported." is displayed</p>	<p>Check the mode which corresponds to the frequency of the image signals being output from the computer.</p>	<p>Refer to the documentation provided with your computer for details on changing the resolution and frequency of the image signals being output from the computer. ☛ p.91</p>
 <p>"No-Signal." is displayed</p>	<p>Are the cables connected correctly?</p> <p>Does the input signal match the connected source?</p> <p>Is the power for the computer or video source turned on?</p> <p>If a laptop computer or a computer with a LCD screen has been connected to the projector, it is necessary to output the image signals to the projector rather than to the screen.</p>	<p>☛ p.16–p.23</p> <p>Use the [Source] button on the projector's control panel (or the [Computer] or [S-Video/Video] button on the remote control) to select the correct signal source. ☛ p.28</p> <p>☛ p.27</p> <p>Normally image signals are output to only the computer's LCD screen, so you need to change the output to an external destination. For some computer models, when the image signals are output externally, they no longer appear on the LCD screen. For details, refer to the section of the documentation provided with your computer under a heading such as "External output", "Connecting an external monitor" or similar. ☛ p.28</p>

Images are out of focus and distorted (not clear)

- The image is fuzzy
- Part of the image is out of focus
- The whole image is out of focus

<p>Has the focus been adjusted correctly?</p>	<p>☛ p.31</p>
<p>Is the lens cover still attached?</p>	
<p>Has the front adjustable feet been adjusted so that the image angle is too big?</p>	<p>If the image angle is too big, the image will be out of focus vertically. ☛ p.32</p>
<p>Is the projector at the correct distance?</p>	<p>The recommended distance from the projector to the screen is within 89–1050 cm (2.9–34.4 ft.). Set up the projector so that the projection distance is within this range. ☛ p.14</p>
<p>Is the projector beam perpendicular to the screen?</p>	<p>☛ p.32</p>
<p>Is the lens dirty?</p>	<p>☛ p.74</p>
<p>Has condensation formed on the lens?</p>	<p>If the projector is suddenly taken from a cold environment to a warm environment, condensation may form on the surface of the lens, and this may cause the images to appear fuzzy. Set the projector up in the room approximately one hour before it is to be used. If condensation forms on the lens, turn off the power and wait for the condensation to disappear.</p>
<p>Have the "Sync.▶", "Tracking▶" and "Position" been adjusted correctly?</p>	<p>If the "Auto Setup" command in the "Video" menu is set to "OFF", press the [Auto] button on the remote control to adjust these settings. If the images have not been correctly adjusted after using the automatic setup function and after pressing the [Auto] button, adjust the settings manually using the respective menus. ☛ p.35, p.45</p>
<p>Are the image signal format settings correct?</p>	<p>If a computer, component video▶ or RGB video source is connected to the projector, use the "Input Signal" command in the "Video" menu to select the signal format which matches the signal connected source. ☛ p.46, p.48 If a composite video▶ or S-Video▶ source is connected to the projector, use the "Video Signal" command in the "Video" menu to select the video signal format. ☛ p.48</p>

- Image is distorted
- Image contains interference

<p>Are the cables connected correctly?</p>	<p>☛ p.16–p.23</p>
<p>Has the correct resolution been selected?</p>	<p>Set the computer so that the signals that are output are compatible with this projector. Refer to the documentation provided with your computer for details on changing the settings. ☛ p.91</p>
<p>Have the "Sync.»", "Tracking»" and "Position" been adjusted correctly?</p>	<p>If the "Auto Setup" command in the "Video" menu is set to "OFF", press the [Auto] button on the remote control to adjust these settings. If the images have not been correctly adjusted after using the automatic setup function and after pressing the [Auto] button, adjust the settings manually using the respective menus. ☛ p.35, p.45</p>
<p>Is an extension cable being used?</p>	<p>If an extension cable is used, electrical interference may affect the signals. Use the accessory cables and check if this helps.</p>
<p>Are the image signal format settings correct?</p>	<p>If a computer, component video» or RGB video source is connected to the projector, use the "Input Signal" command in the "Video" menu to select the signal format which matches the signal connected source. ☛ p.46, p.48 If a composite video» or S-Video» source is connected to the projector, use the "Video Signal" command in the "Video" menu to select the video signal format. ☛ p.48</p>

Only part of the image is displayed (Large/small)

	<p>Has the "Aspect Ratio" setting been selected correctly?</p>	<p>Use the "Aspect Ratio" command in the "Video" menu to set the aspect ratio to "4:3". p.48</p>
<p>Only part of the image is displayed</p>	<p>Is the E-Zoom function being used to enlarge the image?</p>	<p>Press the [ESC] button on the remote control to cancel E-Zoom. p.43</p>
	<p>Has the "Position" setting been adjusted correctly?</p>	<p>Use the "Position" command in the "Video" menu to adjust. p.45, p.47</p>
<p>Small</p>	<p>Has the correct resolution been selected?</p>	<p>Set the computer so that the signals that are output are compatible with this projector. Refer to the documentation provided with your computer for details on changing the settings. p.91</p>
	<p>Change the resolution for the laptop computer or computer with a LCD screen.</p>	<p>Change the resolution so that the image is displayed in the whole of the projection area, or set the image signal to external output only. p.28</p>
	<p>Has the computer been set for dual display?</p>	<p>If dual display has been activated in the Display Properties of the connected computer's Control Panel, the projector will only display about half of the image on the computer screen. To display the whole of the image on the computer screen, turn off the dual display setting. Refer to the video driver manual for the computer's monitor for further details.</p>

The image colours are not right

	<p>Has the image brightness been adjusted correctly?</p>	<p>"Video" - "Brightness" ☛ p.45, p.47</p>
	<p>Are the cables connected correctly?</p>	<p>☛ p.16–p.23</p>
	<p>Do the input signal settings match the signals from the connected device?</p>	<p>If the "Input Signal" command in the "Video" menu is set to "Computer" when a component video signal source is connected to the projector, the images will appear greenish. If the "Input Signal" menu command is set to "Component Video (YCbCr)" or "Component Video (YPbPr)" when a computer is connected, the projected images will appear purplish. Select the correct signal format for the connected source. "Video" - "Input Signal" ☛ p.48</p>
	<p>Has the image contrast been adjusted correctly?</p>	<p>"Video" - "Contrast" ☛ p.45, p.47</p>
	<p>Has the colour been adjusted correctly?</p>	<p>"Advanced" - "Color Adjustment" ☛ p.53</p>
	<p>Have the colour intensity and tint been adjusted correctly?</p>	<p>"Video" - "Color", "Tint" ☛ p.47</p>
	<p>Is the lamp due for replacement?</p>	<p>When the lamp is nearly due for replacement, the image will become darker and the colour quality will become poorer. When this happens, the lamp should be replaced with a new one. ☛ p.77</p>
<p>When connecting to a computer</p>		<p>The colours may not exactly match the colours in the image on the computer screen or LCD screen, but this is normal and is not the sign of a problem.</p>

Images appear dark

	<p>Is the lamp due for replacement?</p>	<p>When the lamp is nearly due for replacement, the image will become darker and the colour quality will become poorer. When this happens, the lamp should be replaced with a new one. ☛ p.77</p>
	<p>Has the image brightness been adjusted correctly?</p>	<p>"Video" - "Brightness" ☛ p.45, p.47</p>
	<p>Has the image contrast been adjusted correctly?</p>	<p>"Video" - "Contrast" ☛ p.45, p.47</p>

Images appear greenish/Images appear purplish

	<p>Do the input signal settings match the signals from the connected device?</p>	<p>If the "Input Signal" command in the "Video" menu is set to "Computer" when a component video signal source is connected to the projector, the images will appear greenish. If the "Input Signal" menu command is set to "Component Video (YCbCr)" or "Component Video (YPbPr)" when a computer is connected, the projected images will appear purplish. Select the correct signal format for the connected source. "Video" - "Input Signal" p.48</p>
---	---	---

No sound can be heard.

	<p>Is the audio source connected correctly?</p> <p>Has the correct audio input port been selected?</p> <p>Has the volume been adjusted to the minimum setting?</p> <p>Is A/V Mute mode active?</p>	<p>p.18, p.24</p> <p>"Audio" - "Audio Input" p.49</p> <p>p.49</p> <p>The projector may be in A/V Mute mode. Press the [A/V Mute] button on the remote control to cancel the A/V Mute. p.40</p>
---	--	---

The remote control does not work

	<p>Is the remote control light-emitting area facing towards the remote control light-receiving area when it is operated?</p>	<p>The operating angle for the remote control is approximately $\pm 30^\circ$ horizontally and approximately $\pm 15^\circ$ vertically. p.12</p>
	<p>Is the remote control too far away from the projector?</p>	<p>The operating distance for the remote control is approximately 6 m (20 ft.). p.12</p>
	<p>Is direct sunlight or strong light from fluorescent lamps shining onto the remote control light-receiving area?</p>	
	<p>Has the battery insulating tape been removed?</p>	<p>p.11</p>
	<p>Is there battery in the remote control?</p>	<p>p.75</p>
	<p>Is the battery dead?</p>	
	<p>Has the battery been inserted correctly?</p>	<p>p.75</p>

The power does not turn off (after the [Power] button is pressed)

	<p>The Power indicator remains orange.</p>	<p>This projector is designed so that the Power indicator remains lit even when after the power has been turned off. The Power indicator will switch off when the power cable is disconnected from the electrical outlet.</p>
	<p>The cooling fan does not stop.</p>	<p>After the [Power] button is pressed to turn off the power, the cool-down period starts. After this, the Power indicator changes to a steady orange, and you can then disconnect the power cable from the electrical outlet. * The cool-down period lasts about 20 seconds.</p>

Appendices

This chapter provides information on maintenance procedures to ensure the best level of performance for the projector for a long time.

Glossary	85	Index	94

This section describes maintenance tasks such as cleaning the projector and replacing consumable parts.

Cleaning

You should clean the projector if it becomes dirty or if the quality of projected images starts to deteriorate.

CAUTION

Be sure to read the separate Safety Instructions/World-Wide Warranty Terms before cleaning.

Cleaning the Projector Case

Clean the projector case by wiping it gently with a soft cloth.

If the projector is particularly dirty, moisten the cloth with water containing a small amount of neutral detergent, and then firmly wring the cloth dry before using it to wipe the projector case. Then wipe the case again with a soft, dry cloth.

CAUTION

Do not use volatile substances such as wax, alcohol or thinner to clean the projector case. These can cause the case to warp and make the coating finish peel off.

Cleaning the Lens

Use a commercially-available air blower, or use a lens cleaning paper to gently wipe the lens.

CAUTION

Do not rub the lens with harsh materials or subject the lens to shocks, as it can easily become damaged.

Cleaning the Air Filter

If the air filter becomes clogged with dust, it can cause overheating and damage the projector.

Turn the projector upside down and use a vacuum cleaner to remove the dust from the air filter.

TIP

- *If the air filter is difficult to clean or if it is broken, it should be replaced. Contact your dealer for a spare air filter.*
- *Spare lamps are provided with a spare air filter. The air filter should also be replaced when the lamp is replaced.*

Replacing Consumables

This section describes how to replace the remote control battery, the lamp and the air filter.

■ Inserting the Battery

Use the following type of battery as a replacement.
1 CR2025 lithium battery

CAUTION

Be sure to read the Safety Instructions/World-Wide Warranty Terms before handling the battery.

PROCEDURE

1 Remove the battery holder.

While pushing the catch of the battery holder inwards, pull the battery holder out.

2

Remove the old battery and insert the new battery.

Check the position of the (+) mark inside the battery holder to ensure that the battery is inserted the correct way.

3

Insert the battery holder into the remote control.

Push the battery holder in until it clicks.

TIP

Dispose of used batteries in accordance with local waste disposal regulations.

Lamp Replacement Period

It is time to replace the lamp when:

- The message "Lamp Replace." appears on the screen for 30 seconds when projection starts

A message will be displayed.

- When the  (Warning) indicator is flashing red at 0.5-second intervals

- The projected image gets darker or starts to deteriorate.

TIP

- *The replacement warning message is set to appear after about 1400 hours of lamp use in order to maintain the brightness and quality of the projected images. If you continue to use the lamp after this period, the possibility of the lamp breaking becomes greater. When the lamp replacement message appears, replace the lamp with a new one as soon as possible, even if it is still working.*
- *The warning message appears after about 1400 hours of use, but the actual life of each individual lamp will vary depending on the characteristics of the lamp and on the way it has been used. Some lamps may stop operating before 1400 hours of use, so you should always have a spare lamp ready in case.*
- *Contact your dealer for a spare lamp.*

■ Replacing the Lamp

CAUTION

Wait until the lamp has cooled down sufficiently before removing the lamp cover. It takes a further one hour after the [cool-down](#) period has finished for the lamp to be cool enough.

PROCEDURE

- 1 Turn off the projector power, wait for the cool-down period to end, and then disconnect the power cable.

The cool-down period lasts for about 20 seconds.

- 2 Wait until the lamp has cooled down, and then remove the lamp cover from the base of the projector.

It takes approximately one hour for the lamp to cool down by itself after the cool-down period has finished.

Insert the screwdriver that is supplied with the spare lamp or a flat-tipped screwdriver into the gap in between the projector and the lamp cover, and slide the screwdriver in until the [▷] mark on the lamp cover and the [◁] mark on the projector are aligned. Then lift up the lamp cover to remove it.

- 3 Loosen the two lamp fixing screws.

Use the screwdriver that is supplied with the spare lamp or a flat-tipped screwdriver to loosen the two silver lamp fixing screws that are securing the lamp to the projector.

4 Take out the lamp.

Hold the lamp as shown in the illustration below and lift it up and out of the projector.

If the lamp is broken replace by a new lamp, or contact your local dealer for further advise. If replacing the lamp yourself, be careful to avoid pieces of broken glass.

5 Install the new lamp.

Hold the lamp so that it faces the correct way to fit into the projector, and then insert the lamp until it clicks into place and tighten the two fixing screws.

6 Install the lamp cover.

Insert the two cover tabs into the projector until the [▷] mark on the lamp cover is aligned with the [◁] mark on the projector, and then slide the lamp cover in until it clicks into place.

Insert the cover so that the [▷] mark and the [◁] mark are aligned.

TIP

- **Install the lamp securely. If the lamp cover is removed, the lamp turns off automatically as a safety precaution. Moreover, the lamp will not turn on if the lamp or the lamp cover is not installed correctly.**
- **Spare lamps are provided with a spare air filter. The air filter should also be replaced when the lamp is replaced. ➡ p.80**
- **Dispose of used lamps properly in accordance with your local regulations.**

■ Resetting the Lamp Operating Time

The projector has a built-in counter which keeps track of the lamp operating time. When the cumulative operating time reaches a certain point, it causes the replacement warning message to be displayed. Therefore, the counter needs to be reset after the lamp has been replaced with a new one. You can do this using the configuration menu. Use the remote control to carry out the operations for resetting the lamp operating time.

TIP

Do not reset the lamp operating time except after the lamp has been replaced, otherwise the lamp replacement period will not be indicated correctly.

PROCEDURE

- 1 **Connect the power cable, turn on the projector's power, and then press the [Menu] button on the remote control.**

The configuration menu will be displayed.

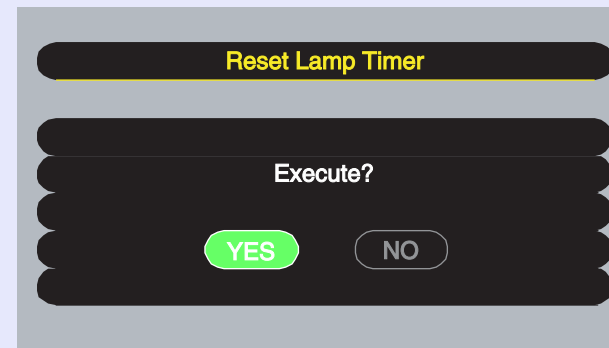

Remote Control

- 2 **Select "Reset Lamp Timer" from the "About" menu and then press the [Enter] button.**

Lamp	: 1400H
Reset Lamp Timer	 Execute
Video Source	: Computer
Input Signal	: RGB
Frequency	: H ---.---kHz : V ---.---Hz
SYNC Polarity	: H ----- : V -----
SYNC Mode	: -----
Resolution	: 0x 0
Refresh Rate	: 0.0 Hz

- 3 **Select "Yes" and then press the [Enter] button.**
The lamp operating time will then be reset.

■ Replacing the Air Filter

The air filter can be replaced even if the projector is installed to a ceiling.

PROCEDURE

- 1 Turn off the projector power, wait for the [cool-down](#) period to end, and then disconnect the power cable.**

The cool-down period lasts for about 20 seconds.

- 2 Put your finger into the recess in the knob of the air filter cover, and lift up the air filter cover to remove it.**

- 3 Replace the air filter with a new one.**

Remove the old air filter, and install the new air filter. Place the new air filter so that it does not slip into the air intake vent.

- 4 Install the air filter cover.**

First insert the tabs, and then press down on the opposite side until it clicks into place.

TIP

Dispose of used air filters properly in accordance with your local regulations.

You can record the image that is currently being projected as a user's logo. Use the remote control to carry out the operations for recording a user's logo.

TIP

When a user's logo is recorded, the previous user's logo will be erased.

PROCEDURE

1 Project the image that you would like to use as a user's logo, and then press the [Menu] button on the remote control.

2 Select the "User's Logo" menu, and then press the [Enter] button.

TIP

If keystone correction or E-Zoom have been carried out, they will be canceled when the "User's Logo" menu is selected.

3

Select "Yes" in the sub-menu, and then press the [Enter] button.

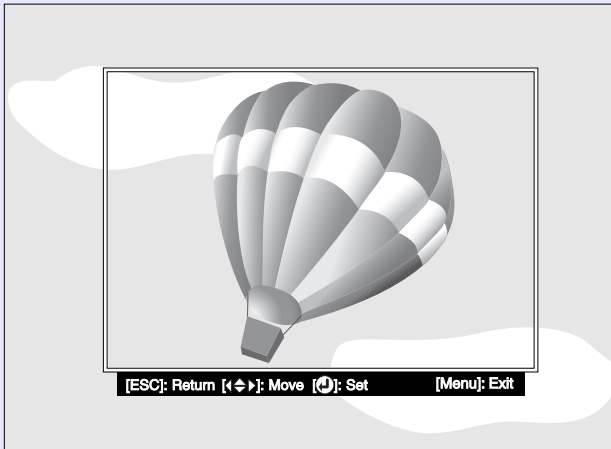

TIP

When you press the [Enter] button, the [resize display](#) will be cancelled, so that when you are projecting images that have a resolution that is different from the number of pixels on the projector's panel, and when you are projecting video images, the display size will change.

- 4** The image to be recorded and a selection marquee box will be displayed. Move the marquee box to select the part of the image to use.

Press the [▲], [▼], [◀] and [▶] buttons to select the part of the image to use as the user's logo, and then press the [Enter] button.

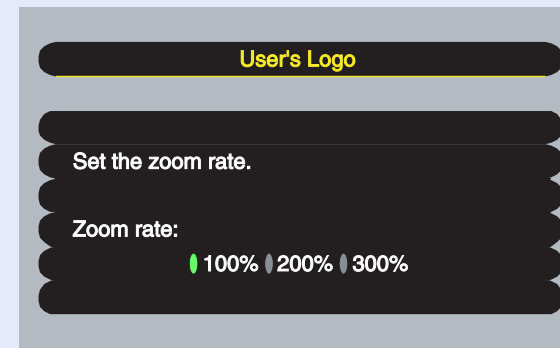

**TIP**

User's logos can be saved at up to 480 × 360 dots in size.

- 5** Select "Yes" at the confirmation screen, and then press the [Enter] button.

- 6** Select the zoom rate in the Zoom rate setting screen, and then press the [Enter] button.

7 Select "Yes" at the confirmation screen, and then press the [Enter] button.

The image will then be saved. Once the image has been saved, the message "Completed." will be displayed.

TIP

- *Saving the user's logo may take a few moments (about 15 seconds). Do not use the projector or any other sources which are connected to the projector while the user's logo is being saved, otherwise it may result in errors in projector operation.*
- *Once a user's logo has been saved, the logo setting cannot be returned to the factory default.*

The following optional accessories are available for purchase if required. This list of optional accessories is current as of November 2002. Details of accessories are subject to change without notice.

Soft carry case ELPKS16

Use this case if you need to carry the projector by hand.

Spare lamp ELPLP21

Use as a replacement for spent lamps.

50" portable screen ELPSC06

A compact screen which can be carried easily. ([Aspect ratio](#)▶▶ 4:3)

60" screen ELPSC07**80" screen ELPSC08****100" screen ELPSC10**

A portable roll-type screen. (Aspect ratio 4:3)

VGA-HD15 PC cable ELPKC02

(1.8 m (6 ft.) - for mini D-Sub 15-pin/mini D-Sub 15-pin)

This is the same computer cable as the projector's accessory computer cable.

VGA-HD15 PC cable ELPKC09

(3 m (9.8 ft.) - for mini D-Sub 15-pin/mini D-Sub 15-pin)

VGA-HD15 PC cable ELPKC10

(20 m (65.6 ft.) - for mini D-Sub 15-pin/mini D-Sub 15-pin)

Use this extension cable if the accessory computer cable is too short.

Remote control unit ELPST06

This is the same remote control as the projector's accessory remote control.

VGA-HD15/BNC PC Cable ELPKC11

(1.8 m (6 ft.) - for mini D-Sub 15-pin/5BNC)

Use in order to connect the projector to a computer with a 5BNC port.

Component video cable ELPKC19

(3 m (9.8 ft.) - for mini D-Sub 15-pin/RCA male × 3)

Use to connect a [component video](#)▶▶ source.

Ceiling mount * ELPMB12

Use when installing the projector to a ceiling.

Ceiling plate * ELPFC03

Pipe 370 (370 mm (14.57 in.)/silver)* ELPFP04

Pipe 570 (570 mm (22.44 in.)/silver)* ELPFP05

Pipe 770 (770 mm (30.31 in.)/silver)* ELPFP06

Use when installing the projector to a high ceiling or a ceiling with veneer panels.

Image presentation camera ELPDC02

ELPDC03

ELPDC04

Use when projecting books, OHP films and slides.

* A special method of installation is required in order to suspend the projector from the ceiling. Please contact the place of purchase if you would like to use this installation method.

Following is an explanation of some of the terms used in this guide which may be unfamiliar or which were not explained in the text of this guide itself. Further information can be obtained by referring to other commercially-available publications.

5BNC	A port used to input analogue video signals.
Aspect ratio	The ratio between an image's length and its height. HDTV images have an aspect ratio of 16:9 and appear elongated. The aspect ratio for standard images is 4:3.
Colour temperature	The temperature of an object which is emitting light. If the colour temperature is high, the colours tend to take on a bluish tinge. If the colour temperature is lower, the colours tend to take on a reddish tinge.
Component video	Video signals which have the video brightness signals and colour signals separated, in order to provide better image quality. In high-definition TV (HDTV), it refers to images which consist of three independent signals: Y (luminance signal), and Pb and Pr (colour difference signals).
Composite video	Video signals which have the video brightness signals and colour signals mixed together. The type of signals commonly used by household video equipment (NTSC, PAL and SECAM formats). The carrier signal Y (luminance signal) and chroma (colour) signal which are contained in the colour bar are overlapped to form a single signal.
Contrast	The relative brightness of the light and dark areas of an image can be increased or decreased in order to make text and graphics stand out more clearly, or to make them appear softer. Adjusting this particular property of an image is called "contrast adjustment".
Cool-down	This is the process by which the projector's lamp is cooled down after it has become hot through use. It is carried out automatically when the [Power] button on either the projector's control panel or the remote control has been pressed to turn off the projector. Do not disconnect the power cable while cool-down is in progress, otherwise the cool-down process will not work properly. If the cool-down period is not allowed to finish normally, the projector's lamp and internal components will remain at high temperatures, and this may shorten the operating life of the lamp or cause problems with the operation of the projector.
Dolby Digital	A sound format developed by Dolby Laboratories. Normal stereo is a 2-channel format which uses two speakers. Dolby Digital is a 6-channel (5.1-channel) system which adds to this a centre speaker two rear speakers and a sub-woofer.
EMP Link21L	A utility software program that allows the projector to be connected to a computer so that the computer can be used to control the projector. For details on acquiring the software and for instructions on using the software and compatible projector models, please visit the Web site http://www.epson.co.uk/support/download/projector.htm .
HDTV	An abbreviation for High-Definition Television. It refers to high-definition systems which satisfy the following conditions. <ul style="list-style-type: none"> • Vertical resolution of 750p or 1125i or greater (p = progressive scanning, i = interlaced scanning) • Screen aspect ratio of 16:9 • Dolby Digital audio reception and playback (or output)
Interlaced scanning	A method of image scanning whereby the image data is divided into fine horizontal lines which are displayed in sequence starting from left to right and then from the top to the bottom of the screen. The even-numbered lines and odd-numbered lines are displayed alternately.

Progressive scanning	A method of image scanning whereby the image data from a single image is scanned sequentially from top to bottom to create a single image.
Refresh rate	The light-emitting element of a display maintains the same luminosity and colour for an extremely short time. Because of this, the image must be scanned many times per second in order to refresh the light-emitting element. The number of refresh operations per second is called the "refresh rate", and is expressed in hertz (Hz).
Resize display	This function is used to project computer images that have a resolution more than or less than the projector's panel resolution to be projected so that they fill the whole of the projection area.
SDTV	An abbreviation for Standard Definition Television. It refers to standard television systems which do not satisfy the conditions for High-Definition Television.
Security lock	A device consisting of a projector case with a hole in it that a commercially-available theft-prevention cable can be passed through in order to secure the device to a table or pillar. This projector is compatible with the Microsaver Security System manufactured by Kensington.
Squeeze mode	In this mode, wide-screen images in 16:9 mode are compressed in the horizontal direction so that they are stored on the recording medium as 4:3 images. When these images are played back by the projector in squeeze mode, they are restored to their original 16:9 format.
sRGB	An international standard for colour intervals that was formulated so that colours which are reproduced by video equipment can be handled easily by computer operating systems (OS) and the Internet.
SVGA	A type of video signal with a resolution of 800 (horizontal) × 600 (vertical) dots which is used by IBM PC/AT-compatible computers.
S-Video	A video signal which has the luminance component and colour component separated in order to provide better image quality. It refers to images which consist of two independent signals: Y (luminance signal), and C (colour signal).
SXGA	A type of video signal with a resolution of 1280 (horizontal) × 1024 (vertical) dots which is used by IBM PC/AT-compatible computers.
Sync. (Synchronization)	The signals output from computers have a specific frequency. If the projector frequency does not match this frequency, the resulting images will not be of a good quality. The process of matching the phases of these signals (the relative position of the crests and troughs in the signal) is called "synchronisation". If the signals are not synchronized, problems such as flickering, blurriness and horizontal interference can occur.
Tracking	The signals output from computers have a specific frequency. If the projector frequency does not match this frequency, the resulting images will not be of a good quality. The process of matching the frequency of these signals (the number of crests in the signal) is called "tracking". If tracking is not carried out correctly, wide vertical stripes will appear in the projected images.
USB	An abbreviation for Universal Serial Bus. USB is an interface for connecting personal computers to peripheral devices which only support relatively low data transmission speeds.
UXGA	A type of video signal with a resolution of 1600 (horizontal) × 1200 (vertical) dots which is used by IBM PC/AT-compatible computers.
VGA	A type of video signal with a resolution of 640 (horizontal) × 480 (vertical) dots which is used by IBM PC/AT-compatible computers.

XGA	A type of video signal with a resolution of 1024 (horizontal) \times 768 (vertical) dots which is used by IBM PC/AT-compatible computers.
YCbCr	The carrier signal which is contained in the colour bar signal used in modern TV transmissions. The name comes from the Y (luminance) signal and the CbCr (chroma (colour)) signals.
YPbPr	The carrier signal which is contained in the colour bar signal used in high-definition TV (HDTV) transmissions. The name comes from the Y (luminance) signal and the PbPr (colour difference) signals.

Command List

When a power ON command is sent to the projector, the power for the projector turns on. When the projector is in a command ready state, it returns the "3Ah" (:) code. Furthermore, when command processing is complete, the projector also returns a ":" code.

The ":" code status can be used to determine whether the projector is ready or busy. If command processing terminates with an error, an error message is output and then the ":" code is sent.

	Item	Command
Power ON/OFF	ON	PWR ON
	OFF	PWR OFF
Signal selection	Computer	SOURCE 11
	Component Video (YCbCr)	SOURCE 14
	Component Video (YPbPr)	SOURCE 15
	Video	SOURCE 41
	S-Video	SOURCE 42
A/V Mute ON/OFF	ON	MUTE ON
	OFF	MUTE OFF
A/V Mute Selection	Black	MSEL 00
	Blue	MSEL 01
	User's Logo	MSEL 02

Communication Protocol

- Standard baud rate : 9600 bps
- Data length : 8 bits
- Parity : None
- Stop bit : 1 bit
- Flow control : None
- Connector shape : D-Sub 9-pin (male)
- Projector input port : Control (RS-232C)

(type B) (type A)*

<At computer>

* Can be used as a USB hub.

USB Connection Setup

In order to control the projector using ESC/VP21 commands via a USB connection, the following preparations must be carried out.

PROCEDURE

- 1** Download the [EMP Link21L](#) utility software from the EPSON web site to the computer being used.

For details on acquiring the software, please visit the Web site <http://www.epson.co.uk/support/download/projector.htm>.

- 2** The USB driver (USB-Com Driver) will be downloaded together with the utility software, so install this USB driver into the computer that is to be used.

Refer to the EMP Link21L User's Guide that is downloaded together with the utility software for instructions on installing the USB driver.

- 3** Change the "COM Port" setting in the "Advanced" menu to "USB".

- 4** Turn off the power for the projector.

- 5** After the [cool-down](#) period has finished, turn the projector's power back on.

Once the projector's power has turned back on, communication via a USB Connection will then be possible.

* Connection is not possible if the equipment does not have a VGA output port.

It may be possible to project signals which are not listed in the above table. However, not all functions may be supportable with such signals.

Product name	Multimedia Projector EMP-73/53		
Dimensions	315 (W) × 87 (H) × 240 (D) mm (12.4 (W) × 3.43 (H) × 9.45 (D) in.) (not including feet)		
Panel size	0.7 inches		
Display method	Polysilicon TFT active matrix		
Resolution	EMP-73 : XGA ▶ 786,432 pixels (1024 (W) × 768 (H) dots) × 3 EMP-53 : SVGA ▶ 480,000 pixels (800 (W) × 600 (H) dots) × 3		
Focus adjustment	Manual		
Zoom adjustment	Manual (approx. 1:1.2)		
Lamp (light source)	UHE lamp, 165 W, Model No.: ELPLP21		
Max. audio output	1W monaural		
Speaker	1		
Power supply	100–240V 2.6–1.3A		
Operating temperature	+5°– +35°C (41°–95°F) (No condensation)		
Storage temperature	-10°– +60°C (14°–140°F) (No condensation)		
Weight	Approx. 2.9 kg (6.4 lbs)		
Connectors	Monitor Out :	1	Mini D-Sub 15-pin (female) Black
	Computer/Component Video:	1	Mini D-Sub 15-pin (female) Blue
	S-Video:	1	Mini DIN 4-pin
	Video:	1	RCA pin jack
	USB*:	2	USB connector (A/B series)
	Audio 1:	1	Stereo mini jack
	Audio 2:	1	RCA pin jack × 2 (L, R)
	Control (RS-232C) :	1	D-Sub 9-pin (male)

* The USB interface complies with the USB 1.1 standard. The USB connector is not guaranteed to operate correctly with all USB-compatible devices.

DECLARATION of CONFORMITY

According to 47CFR, Part 2 and 15
Class B Personal Computers and Peripherals; and/or
CPU Boards and Power Supplies used with Class B
Personal Computers

We :EPSON AMERICA, INC.
Located at :3840 Kilroy Airport Way
MS: 3-13
Long Beach, CA 90806
Tel :562-290-5254

Declare under sole responsibility that the product identified herein, complies with 47CFR Part 2 and 15 of the FCC rules as a Class B digital device. Each product marketed, is identical to the representative unit tested and found to be compliant with the standards. Records maintained continue to reflect the equipment being produced can be expected to be within the variation accepted, due to quantity production and testing on a statistical basis as required by 47CFR 2.909. Operation is subject to the following two conditions : (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Trade Name :EPSON
Type of Product :Projector
Model :EMP-73/53 / ELP-73/53

**FCC Compliance Statement
For United States Users**

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio or television reception. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause interference to radio and television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures.

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

WARNING

The connection of a non-shielded equipment interface cable to this equipment will invalidate the FCC Certification or Declaration of this device and may cause interference levels which exceed the limits established by the FCC for this equipment. It is the responsibility of the user to obtain and use a shielded equipment interface cable with this device. If this equipment has more than one interface connector, do not leave cables connected to unused interfaces. Changes or modifications not expressly approved by the manufacturer could void the user's authority to operate the equipment.
