Calculation of the projection distance

To use a projected image size not listed in this manual, check the projected image size SD (m) and use the respective formula to calculate the value.

The unit of all the formulae is m. (Values obtained by the following calculation formulae contain a slight error.)

When calculating the value using image size designation (value in inches), multiply the value in inches by 0.0254 and substitute it into SD in the formula.

	Aspect ratio 16:9	Aspect ratio 16:10	Aspect ratio 4:3
Projected image size Height (SH)	= SD x 0.490	= SD x 0.530	= SD x 0.6
Projected image size Width (SW)	= SD x 0.872	= SD x 0.848	= SD x 0.8
Minimum projection distance (LW)	= 1.2906 x SD - 0.0534	= 1.3952 x SD - 0.0534	= 1.5795 x SD - 0.0534
Maximum projection distance (LT)	= 2.5693 x SD - 0.0398	= 2.7776 x SD - 0.0398	= 3.1444 x SD - 0.0398

Adjustment range by the lens position shift (optical shift)

Based on the standard projection position using the optical axis shift function, the projection position can be adjusted in the range shown in the following figure.

Following figure shows the adjustment range when the projector is installed on the floor.

- Optimal image can be achieved by installing the projector squarely in front of the screen and adjusting the lens shift lever to center.

[SCREEN ADJUSTMENT] projection range

Only [KEystone] used		[KEystone] and [CURVED] used together				Only [CURVED] used	
Vertical keystone correction angle α (°)	Horizontal keystone correction angle β (°)	Vertical keystone correction angle α (°)	Horizontal keystone correction angle β (°)	Min. value of R2/L2	Min. value of R3/L3	Min. value of R2/L2	Min. value of R3/L3
±40	±20	±20	±15	0.9	1.7	0.5	1.0

- When [SCREEN ADJUSTMENT] is used, the focus of the entire screen may be lost as correction increases.
- Make the curved screen a circular arc shape with one part of a perfect circle removed.

Installable angle

Install the projector at an angle within the range shown below.

Projection in all 360° direction

360° vertically

360° horizontally

360° tilted
(combination of vertical and horizontal)

Cautions when setting up the projector

- Do not stack projectors on top of each other.
- Do not use the projector supporting it by the top.
- Do not block the intake and exhaust vents of the projector.
- Prevent hot and cool air from the air conditioning system to blow directly to the intake and exhaust vents of the projector.

100 mm [3-15/16 in] or longer

- Do not install the projector in a confined space. When installing the projector in a confined space, provide air conditioning or ventilation separately. Exhaust heat may accumulate when the ventilation is not enough, triggering the protection circuit of the projector.

List of compatible signals

The following table specifies the image signals that the projector can project. This projector supports the signal with ✓ in the compatible signal column.

1 The signal with 1/1.001x vertical scanning frequency is also supported. 2 YpPr 4:2:0 format only 3 VESA CVT-RB (Reduced Blanking)-compliant

Note

- A signal with a different resolution is converted to the number of display dots. The number of display dots is as follows. 3840 x 2160
However, when the input signal is 1080/120p or 1920 x 1080/240, the number of display dots is as follows. 1920 x 1080
- The "i" at the end of the resolution indicates an interlaced signal.
- When interlaced signals are connected, flickering may occur on the projected image.
- When the DIGITAL LINK connection is made with the long-reach communication method, the signal that the projector can receive is up to 1080/60p (1920 x 1080 dots, dot clock frequency 148.5 MHz).
- Even if it is the signal listed in the list of compatible signals, it may not be displayed by the projector if the image signal is recorded in a special format.
- Horizontal shift and zoom cannot be used when using the following 4K YUV420 signals.
3840x2160/60p YUV420 3840x2160/50p YUV420 4096x2160/60p YUV420 4096x2160/50p YUV420

List of Plug and play compatible signals

The following table specifies the image signals compatible with plug and play.

Signal with ✓ in the plug and play compatible signal column is the signal described in the EDID (extended display identification data) of the projector. For the signal without ✓ in the plug and play compatible signal column, the resolution may not be selected on the computer even if the projector is supporting it.
