# BenQ ecoFACTS

BenQ has been dedicated to the design and development of greener product as part of its aspiration to realize the ideal of the “Bringing Enjoyment 'N Quality to Life” corporate vision with the ultimate goal to achieve a low-carbon society. Besides meeting international regulatory requirement and standards pertaining to environmental management, BenQ has spared no efforts in pushing our initiatives further to incorporate life cycle design in the aspects of material selection, manufacturing, packaging, transportation, using and disposal of the products. BenQ ecoFACTS label lists key eco-friendly design highlights of each product, hoping to ensure that consumers make informed green choices at purchase. Check out BenQ's CSR Website at <http://csr.BenQ.com/> for more details on BenQ's environmental commitments and achievements.

# Introduction

InstaShow™ is a wireless device for corporate meeting rooms. Users expect devices to respond instantly, apps to launch and to control at their fingertips, and information to be available on demand. InstaShow™ bypasses the complicated steps of IP addresses, driver installation, app execution, setting selection, etc. to quickly deliver professional, stable visual quality for teams to collaborate freely and confidently. InstaShow™ is an unique all-hardware solution without software issues for universal compatibility and display flexibility.

A standard InstaShow™ set consists of an InstaShow Host and two InstaShow Buttons. Depending on the location where you buy the product, the software of the base unit can be different. You can buy additional InstaShow Button kit if needed.

## Product features

InstaShow™ is equipped with the following features:

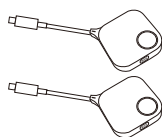

Features	Description
True Plug & Play	Simply connect InstaShow™ into your USB-C™ port, then push the button to start presenting immediately.
No Software	InstaShow™ doesn't need any software installation or execution. There's no setup, configuration, or waiting for pop-ups to launch. Just plug into your PC or Mac and start presenting immediately.
InstaVideo	Convenient button switches between Presentation mode and Video mode for precise productivity or smooth 1080p video, only from BenQ. See <a href="#">Play video with InstaShow™ on page 32</a> for details.
Auto Channel Selection	InstaShow™ automatically selects the best wireless channel upon boot-up, ensuring smooth presentations in any environment.
Wireless 802.11ac	The latest 802.11ac Wi-Fi guarantees extremely smooth wireless streaming without lag or buffering.
Video and Audio	InstaShow™'s HDMI output supports up to 60Hz Full HD 1080p video and stereo sound without cable clutter or complicated driver selection.

Features	Description
Assured Performance	Peace of mind for consistent wireless presentation performance without relying on your PC.
Extended Desktop	Keep your presenter view, notes, and backup data on your laptop screen while presenting to the wireless screen with extended desktop in both Windows and OS X.

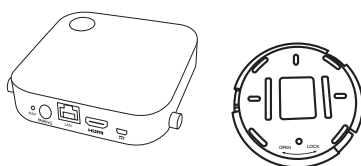

- Transmission distance depends on actual environment. Stated distance is based on line-of-sight measurement. Structures constructed of steel, wood, concrete, or brick may decrease transmission distance.
- According to regulatory restrictions in different regions of the world, Wi-Fi channels cannot be used in countries outside the purchased region.

## Package content

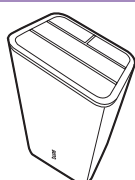

InstaShow Buttons

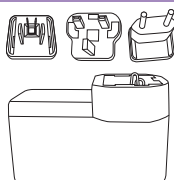

InstaShow Host and Lid

Round Double-sided sponge  
Tape

Quick Start Guide

Safety Statement

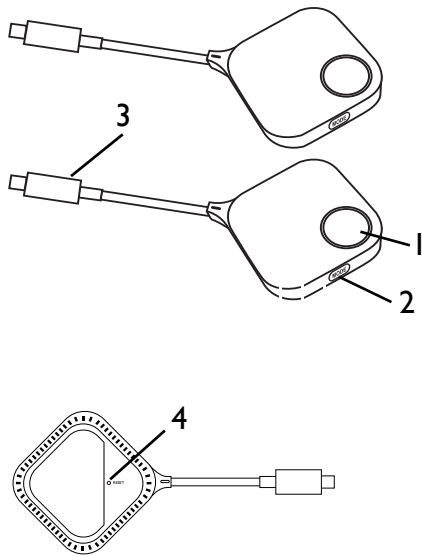

- Available accessories and the pictures shown here may differ from the actual contents and the product supplied for your region.
- Use original accessories to ensure compatibility.
- Always keep the product and accessories out of reach of children.

# Product specification

Feature			
Color		Black	
Video outputs		HDMI 1.4, comply with HDCP	
Frame Rate		Supports up to 1080p@60Hz	
Output resolution		Video Timing: 1280x720 (720P), 1920x1080 (1080p) PC Timing: 800x600, 1024x768, 1280x768, 1280x1024, 1280x960, 1360x768, 1440x900, 1400x1050, 1680x1050	
Input resolution		Up to 1920x1080	
Number of simultaneous connections		16 pcs	
Audio		Stereo, Radio quality 16bits 48KHz	
Wireless transmission protocol		IEEE 802.11ac, 5GHz, 2T2R	
Data rate wireless		Up to 867Mbps	
Frequency Band		5GHz	
Authentication protocol		WPA2 (WPAS-PSK (Pre-Shared key) / WPA2-Enterprise)	
Security (encryption)		AES 128 bit	
Support platform		Windows, MAC, Chrome. Any OS supports HDMI standard 1.4	
Reach		Max. 8M between the InstaShow Button and the InstaShow Host	
Temperature range		Operating: 0°C to +40°C (+32°F to +104°F)	
		Storage: -10°C to +60°C (+14°F to +140°F)	
Humidity		Storage: 5% to 90% relative humidity, non-condensing	
		Operation: 10% to 80% relative humidity, non-condensing	
InstaShow Button			
Cable	USB-C™	Power supply	DC 5V±10%, 0.9A
Reset button	x1	Power consumption	Normal: 4.5W
Mode key	x1	Dimension	84.5x189.55x19.9mm
LED	Red (boosting), Green (Wi-Fi connected), Blue (presenting)	Weight	95g
InstaShow Host			
Power button	x1	Power supply	DC 5V±10%, 1.5A
Pairing key	x1	Power consumption	Normal: 5W
LAN	x1 (10/100 Mbps)		Network standby: 2W
Video output	x1 HDMI 1.4 (video and audio)		HDMI standby: 0.02W
DC Power Jack	x1 (micro USB)	Dimension (WxHxD) (not including rubber feet)	110x110x27mm (99mm with antenna)
LED	Red (boosting), Green (ready for connection), Blue (presenting)	Weight (include antenna)	150g
Cradle			
Dimension	85x97.5x170.4mm	Weight	630g

# Overview

## InstaShow Button

### 1. **Present key with LED indicator**

Press to start or stop presenting. Refer to [LED indicators of the InstaShow Button and InstaShow Host on page 9](#) for more information.

### 2. **MODE key**

Press to pair with an InstaShow Host or to switch to Video/Present mode.

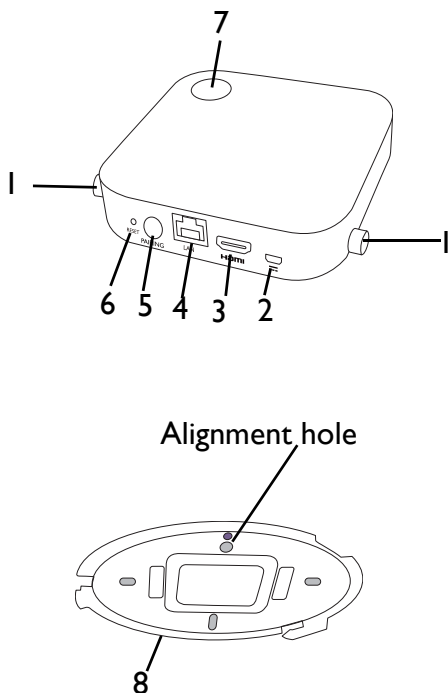

### 3. **USB-C™ connector**

Connect to a computer or laptop.

### 4. **RESET**

Poke the **RESET** hole to reset the device if the device stops responding. Refer to [Resetting a InstaShow Host on page 25](#) for more information.

## InstaShow Host

### 1. **Fixture parts for the Antennas**

Refer to [Assembling the InstaShow Host on page 11](#) for more information.

### 2. **DC 1.5A port**

Connect to an adapter or a display using a Cable USB A(M) to Micro B(M).

### 3. **HDMI port**

Connect to a display using a Cable HDMI A(M) to A(M).

### 4. **LAN port**

Allows users access to the web management interface through a direct or network connection.

### 5. **PAIRING key**

Press to pair with an InstaShow Button.

### 6. **RESET**

Poke the **RESET** hole to reset the device if the device stops responding. Refer to [Resetting a InstaShow Button on page 26](#) for more information.

### 7. **Power button with LED indicator**

Press to turn the InstaShow Host on and off.

### 8. **Lid of InstaShow Host**

Refer to [Attaching the InstaShow Host to the ceiling on page 11](#) for more information.

## LED indicators of the InstaShow Button and InstaShow Host

Please refer to the tables below for detailed indicator and status descriptions for the InstaShow Button and InstaShow Host.

LED indicator on the InstaShow Button	Status Description
Static blue	The device is presenting.
Flashing blue	The device is in pairing state for 10 seconds.
Flashing green	The device is upgrading the firmware.
Static green	The device is connected and working normally.
Flashing red	The device is trying to connect to an InstaShow Host or encountering a problem.
Static red	The device is starting up.
Off	The device is powered off.
Quick flashing red	The reset process is triggered.

LED indicator on the InstaShow Host	Status Description
Static blue	Connected device is presenting.
Flashing blue	The device is in pairing state for 2 minutes.
Flashing green	The device is upgrading the firmware.
50% static green	The device is in network standby mode.
Static green	The device is on and ready for connection.
Flashing red	The device is encountering a problem.
Static red	The device is starting up.
Off	The device is powered off.
Quick flashing red	The reset process is triggered.

# Installation

This section will guide you on how to prepare the unit before its initial use.

## Environment check

Before installing your InstaShow™ kit, check the environmental conditions.

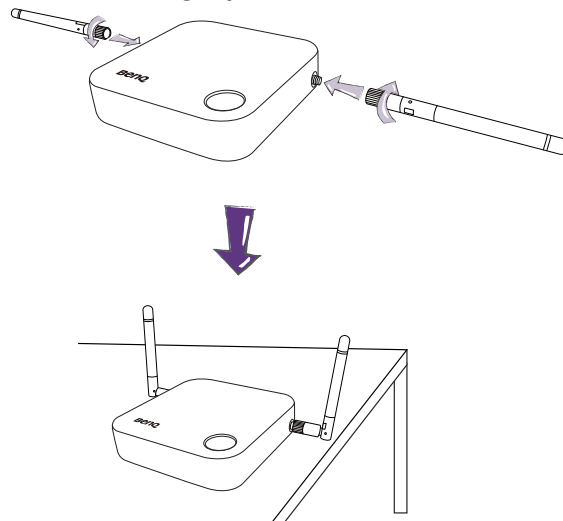

1. Do not install the device near heat sources like radiators or direct sunlight, or in a site with excessive dust or humidity.
2. Ambient temperature conditions are listed as below. Maximum ambient temperature should be +40°C or 104°F. Minimum ambient temperature should be +0°C or 32°F. Storage temperature should be -10°C to +60°C (14°F to 140°F).
3. Humidity conditions are listed as below. For storage, the relative humidity should be 5% to 90% (non-condensing). For operation, the relative humidity should be 10% to 80% (non-condensing).

As your InstaShow™ works with different displays, the steps required to complete the installation may vary according to the actual environment and your display specifications. Follow the procedures below and refer to the specified sections for details.

1. Assemble the InstaShow Host with the antennas. See [Assembling the InstaShow Host on page 11](#) for details.
2. Connect the InstaShow Host to the display and power properly. See [Connecting the HDMI cable and power on page 16](#) for details. Four installation methods are provided.
  - Attaching the InstaShow Host to the ceiling
  - Attaching the InstaShow Host to a ceiling mount
  - Placing the InstaShow Host on a table
  - Installing the InstaShow Host on the wall or trolley
3. Connect the InstaShow Button to the desired devices and power properly. See [Setting up and powering an InstaShow Button on page 19](#) for details.
4. Make sure that all the connected devices have been powered on. Press the source button of the display and make sure that the HDMI source has been transmitted. See [Pairing a InstaShow Button and InstaShow Host on page 22](#) for details.

## Assembling the InstaShow Host

Assemble the InstaShow Host with two antennas by turning the antennas clockwise (right) and counterclockwise (left) to fasten them tightly.

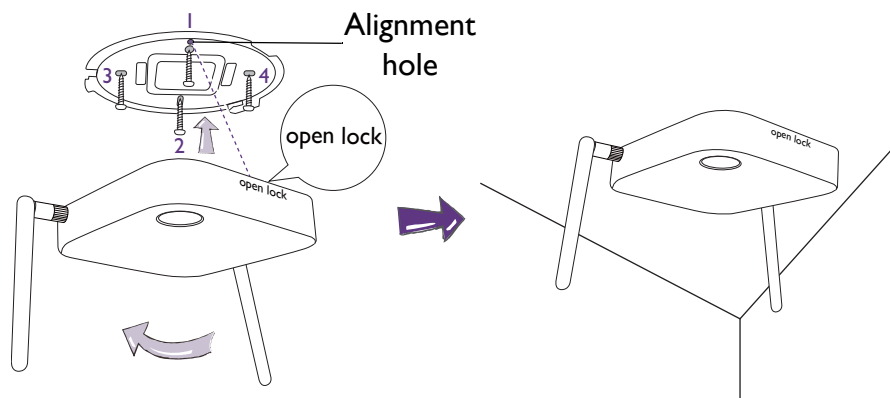

## Setting up the InstaShow Host

You are provided with four different ways to position the InstaShow Host. The total weight of the InstaShow Host Unit is 150g.

### Attaching the InstaShow Host to the ceiling

1. Place the lid on the ceiling and locate the alignment hole.
2. Use the screws provided to lock the lid to the ceiling.
3. Lock the first hole (1).
4. Follow the instruction in the illustration below to lock the other holes (2-4).
5. Rotate the InstaShow Host counterclockwise to affix the InstaShow Host to the lid.

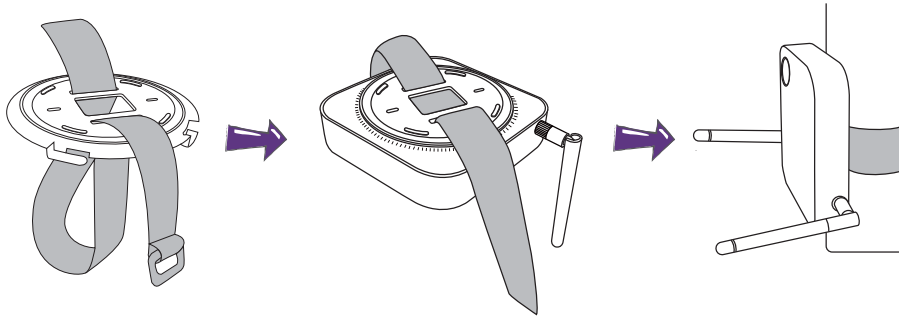

- Please only use the screws (M3\*16 tapping screw) provided with the kit to mount the InstaShow Host to the ceiling.
- Please see [Positioning the InstaShow Host antennas on page 15](#) for guidelines on positioning the antenna to maximize signal reception.

### Attaching the InstaShow Host to a ceiling mount

If the display is mounted on the ceiling:

1. Attach the InstaShow Host to the ceiling mount using the provided velcro strap.
2. Fix the InstaShow Host to the mounting holder.
3. Use the supplied velcro to fix the mounting holder and the InstaShow Host to the ceiling mount as shown in the illustration.

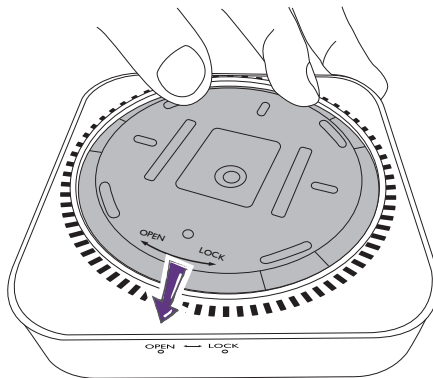

- Please only use the velcro strap (240(L)mm\*25(W)mm) provided with the kit to mount the InstaShow Host to a ceiling mount.
- Please see [Positioning the InstaShow Host antennas on page 15](#) for guidelines on positioning the antenna to maximize signal reception.

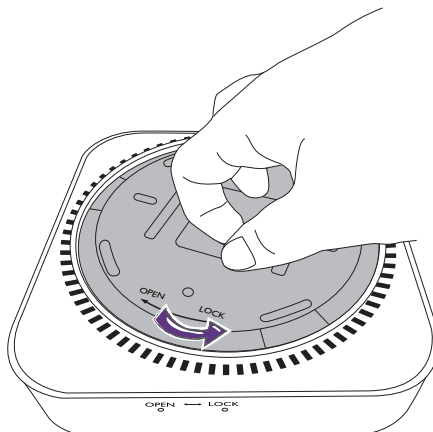

## Placing the InstaShow Host on a table

If your display is placed on a table, first attach the lid of to the InstaShow Host in the following the process described below:

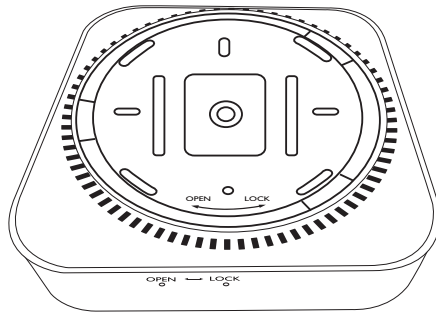

1. Align the top of the lid over the bottom of InstaShow Host so that the alignment hole is pointed towards the “Open” text located at the front side of the InstaShow Host, then push the lid into the InstaShow Host.

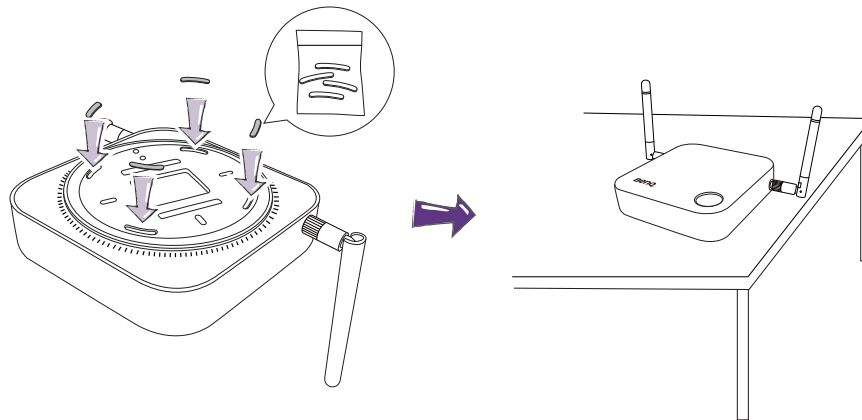

2. Follow the “Lock” arrow displayed on the lid and turn the lid counter-clockwise.

3. Turn the lid until it clicks into place.

4. Attach the rubber feet to the recesses on the lid and put the InstaShow Host right next to the display.

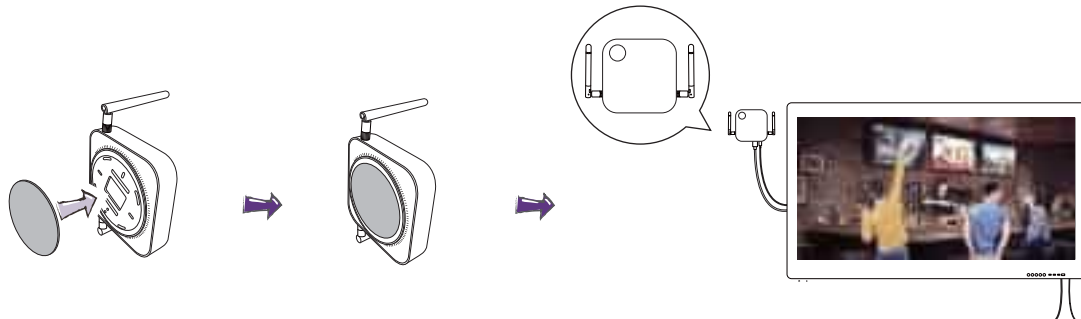

- Please only use the rubber foot provided with the kit to attach to the InstaShow Host.
- Please see [Positioning the InstaShow Host antennas on page 15](#) for guidelines on positioning the antennas to maximize signal reception.

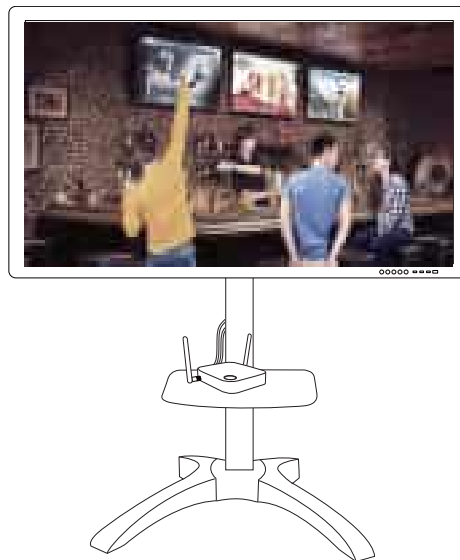

## Installing the InstaShow Host on the wall or trolley

If you need to install the InstaShow Host near a display:

1. Use the round double-sided sponge tape provided to stick to the lid of the InstaShow Host.
2. Affix the InstaShow Host on the wall near the display.
3. Keep the antennas away from any signal obstructions.

You can also place the InstaShow Host on a mobile display trolley. See the illustration.

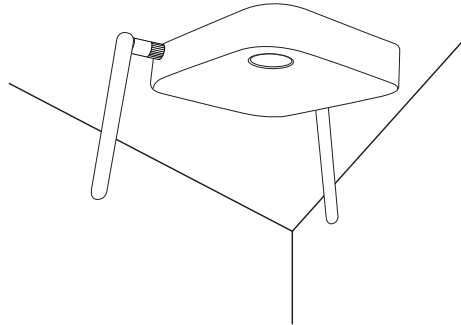

- Please only use the round double-sided sponge tape provided with the kit to stick the lid of the InstaShow Host.
- Please wait 24 hours after you attach the double-sided sponge tape to the lid of the InstaShow Host.

## Positioning the InstaShow Host antennas

Once you have properly installed the InstaShow Host, follow the guidelines below to position the antennas to maximize signal reception:

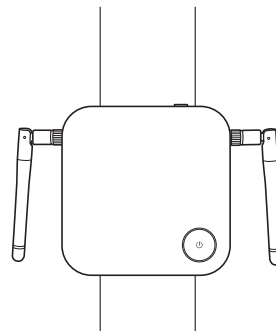

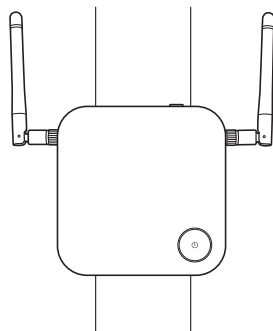

### For ceiling installation

Position the antennas so that they are both pointed downwards at an angle roughly perpendicular to the ceiling:

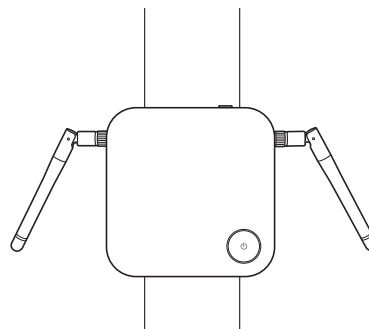

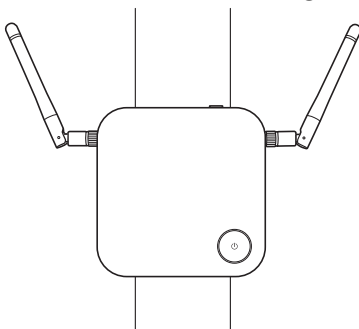

### For ceiling mount installation

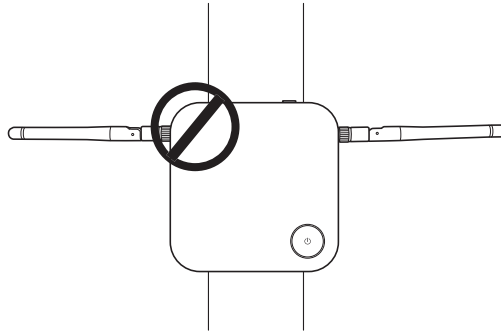

- Position the antennas so that they are both point either upwards or downwards roughly parallel to the ceiling mount:

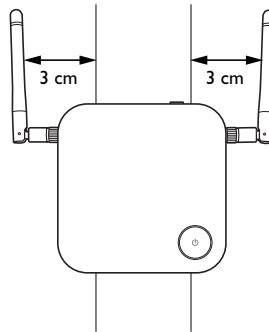

- If you encounter bad signal reception after initial use of the InstaShow Host you can manually adjust the antennas so that they tilt at a slight angle to maximize signal reception. When doing so, avoid tilting the antennas toward the ceiling mount:

- Avoid positioning the antennas in a horizontal manner, this may result in a weak signal reception:

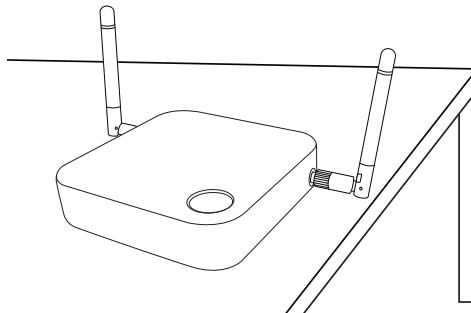

- If the InstaShow Host is attached to a metallic ceiling mount ensure that the antennas are at least 3 cm away from the metal portion of the ceiling mount:

## For table placement

Position the antennas so that they are both pointed upwards roughly perpendicular to the table:

## Connecting the HDMI cable and power

Once the InstaShow Host has been positioned properly near the display, connect the HDMI cable and power to ensure signal transmission.

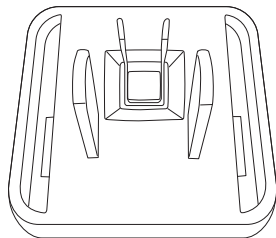

To supply power to the InstaShow Host, do one of the following.

Assemble the adapter. See [Assembling the adapter on page 17](#) for details.

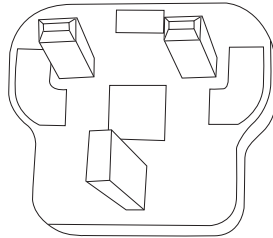

- Some BenQ projector models may be equipped with a USB type A jack (5V/1.5A) to provide power supply to the InstaShow Host. See [Power supply via a USB type A jack \(5V/1.5A\) on page 18](#) for details.
- For display models without a USB type A jack (5V/1.5A) for power supply, see [Power supply via a power adapter on page 19](#) for details.

## Assembling the adapter

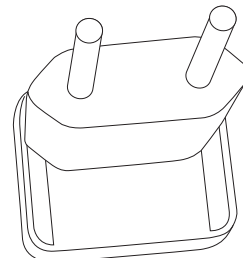

Every InstaShow™ adapter provided in the box includes a plug socket and plugs based on the region in which you purchased InstaShow™. Below are images of the standard American, standard European, and standard British plugs:

Standard American

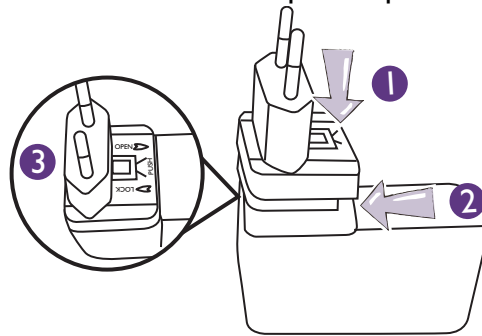

Standard British

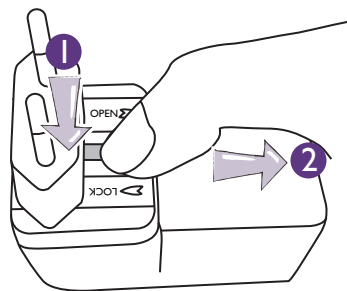

Standard European

To connect the plug of your choice, follow the steps below.

1. Align and insert the bottom hook to the adapter.
2. Close the gap by pushing the plug.
3. The adapter is successfully assembled when it clips into place.

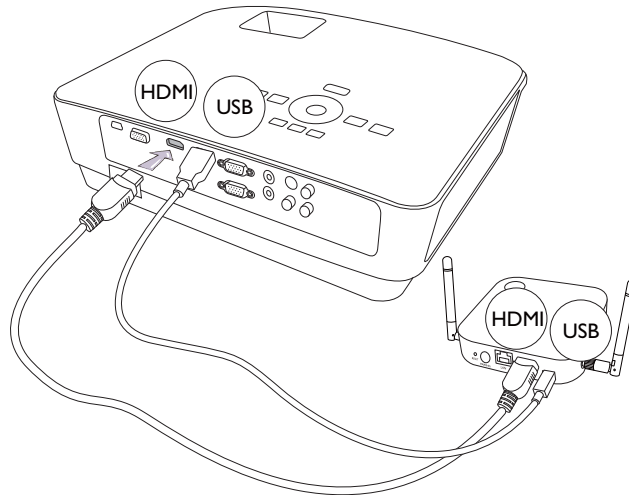

To disconnect the plug, follow the steps below.

1. Push the latch in the middle.
2. Open the gap by pulling the gap downwards.

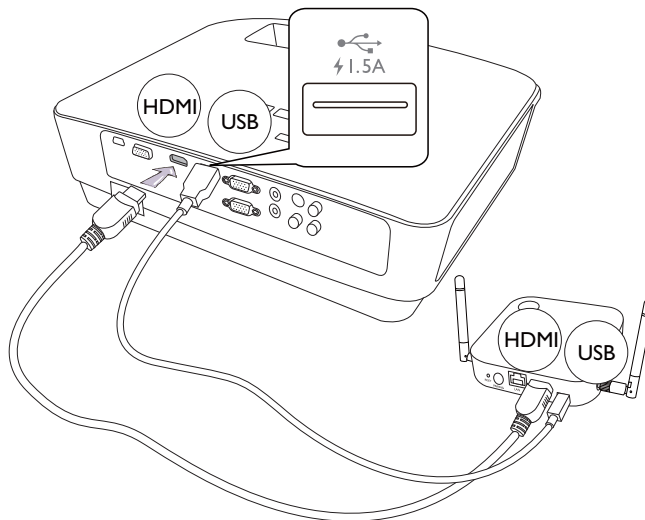

## Connecting the HDMI cable

Connect the HDMI cable to the HDMI out jack of the InstaShow Host and the HDMI input jack of the projector.

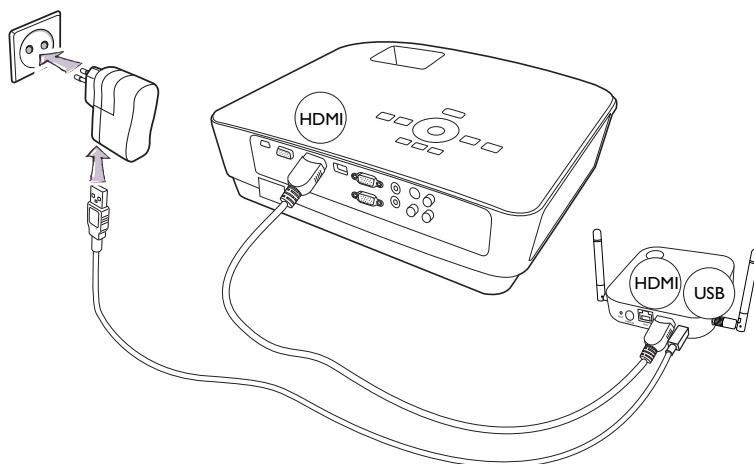

## Power supply via a USB type A jack (5V/1.5A)

Connect one end of the supplied USB cable to the mini USB jack of the InstaShow Host and the other end to the USB type A jack (1.5A) of the BenQ projector. See the illustration.

## Power supply via a power adapter

Connect the supplied USB power adapter to the mini USB jack of the InstaShow Host and plug the other end into a wall socket. The LED indicator on the power button of the InstaShow Host lights up static red when the InstaShow Host is connected to the power mains.

For BenQ IFP (Interactive Flat Panel) products, please have power supplied via a power adapter.

## LAN connection

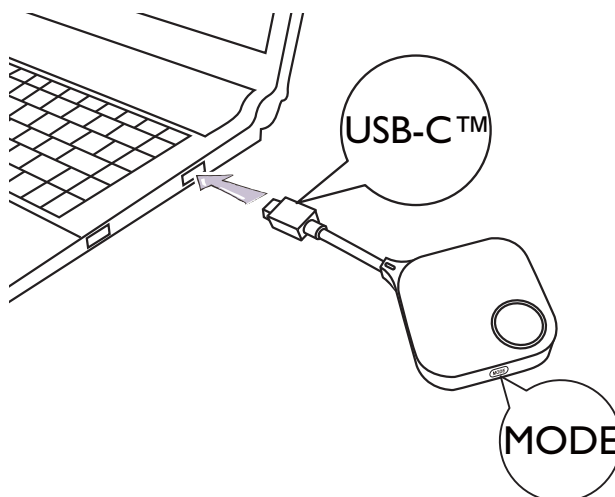

The InstaShow Host can be connected to a local network or directly to a laptop. The LAN connection can be used to configure your InstaShow™ and update the software. Insert a network cable with RJ-45 connectors into the LAN port and connect the other side to a LAN.

## Setting up and powering an InstaShow Button

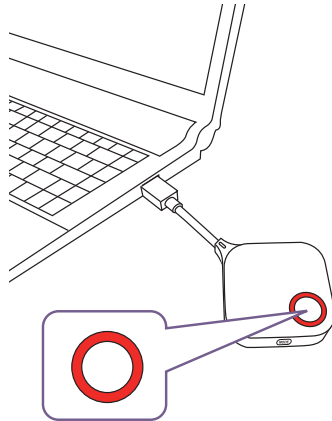

Make sure your laptop supports video output and power delivery via USB-C™ port (DisplayPort Alternate Mode on USB-C™).

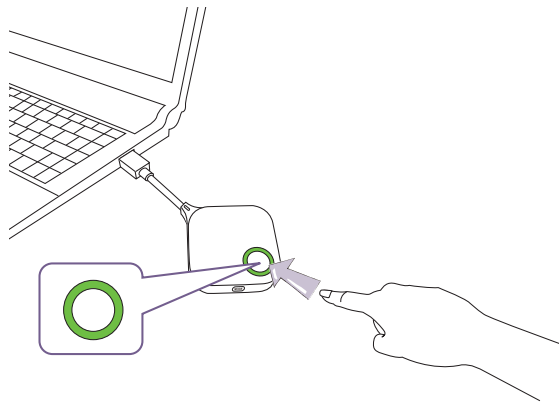

1. Connect the InstaShow Button's USB-C™ jack to the corresponding input of a laptop. See the illustration.

2. The LED indicator of the InstaShow Button will turn red while the InstaShow Button is starting up.

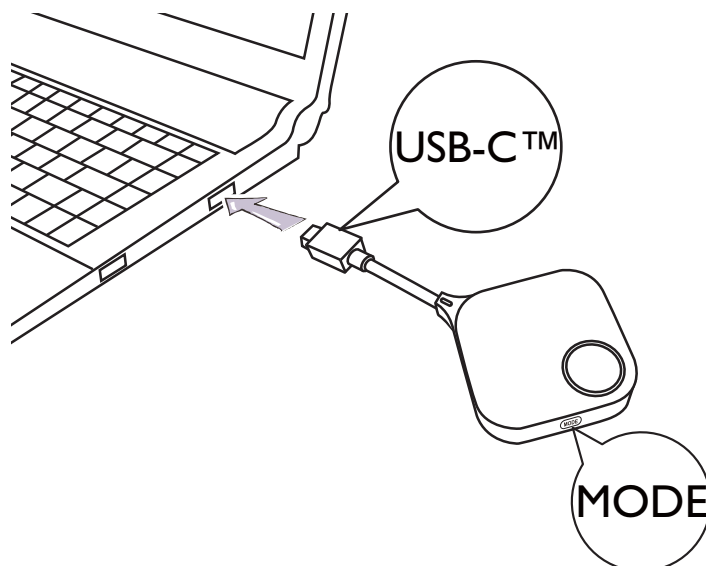

3. When the InstaShow button is ready to present, the LED indicator will turn green. Press the Present key when the LED indicator turns green.

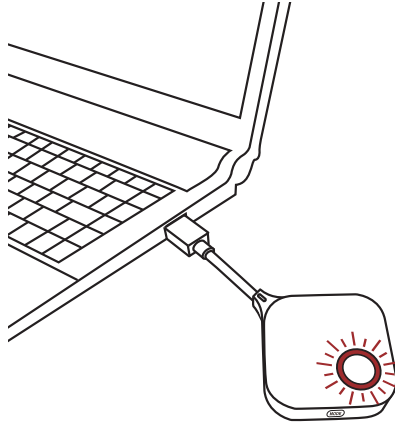

- Handle the InstaShow Button cable with care. Rough handling might cause defects.
- Pull/Push the plug instead of the cable when inserting or removing InstaShow Buttons.

If you purchase an additional InstaShow Button (via an InstaShow Button Kit), please follow the process described below:

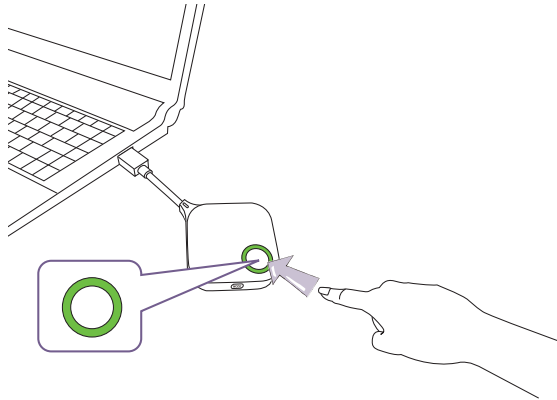

- I. Connect the InstaShow Button's USB-C™ jack to the corresponding input of a laptop. See the illustration.

2. The LED indicator of the InstaShow Button will flash red while the InstaShow Button is starting up.

3. When the InstaShow button is ready to present, the LED indicator will turn green. Press the Present key when the LED indicator turns green.

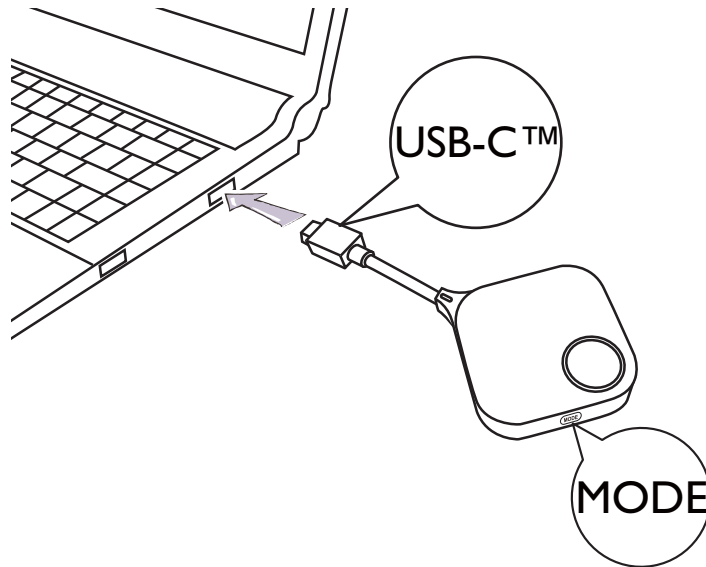

- Handle the InstaShow Button cable with care. Rough handling might cause defects.
- Pull/Push the plug instead of the cable when inserting or removing InstaShow Buttons.

## Pairing a InstaShow Button and InstaShow Host

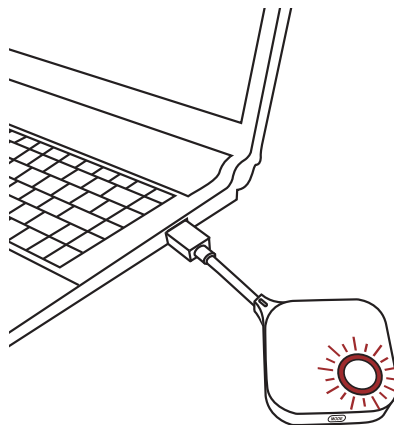

A InstaShow™ set includes an InstaShow Host and two InstaShow Buttons, which are paired before shipment. In such a case, you don't need to pair them again. However, if you buy two or more sets of InstaShow™, and you want to pair an InstaShow Button with a different InstaShow Host, you need to follow the instruction below. If you buy an additional InstaShow Button kit, and you want to pair the new InstaShow Buttons with your InstaShow Host, you need to follow the instruction below as well.

### When the InstaShow Host is placed on a table

1. Make sure your InstaShow Host is ready with power supply. Connect the InstaShow Button's USB-C™ jack to the corresponding input of a laptop.

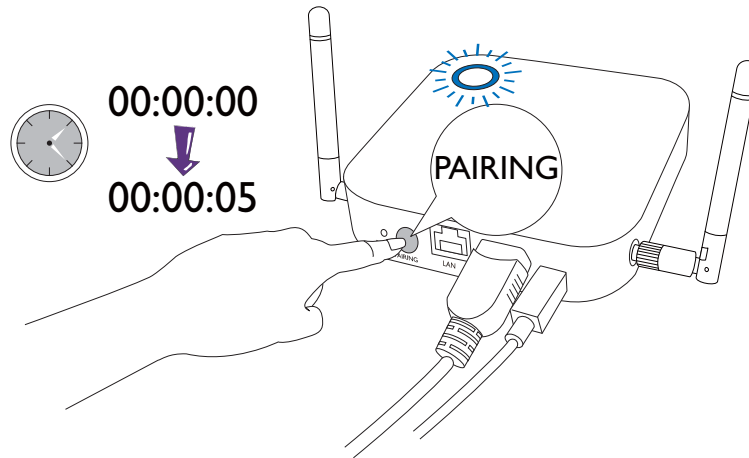

2. When the InstaShow Button is connected to the laptop, the LED indicator of the InstaShow Button will flash red. The InstaShow Button is in pairing mode, waiting to pair with your InstaShow Host.

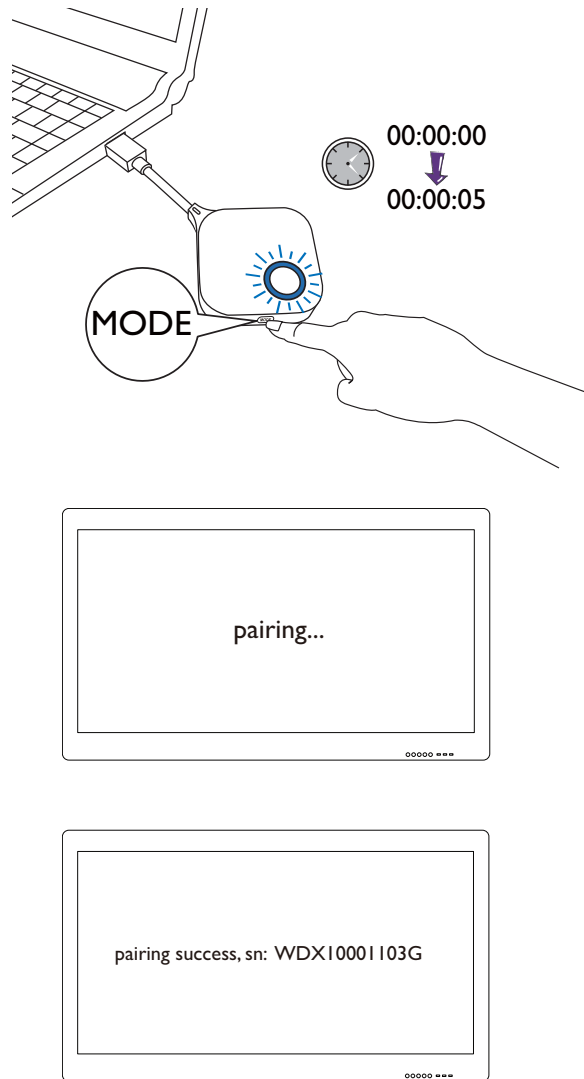

If an InstaShow Button nearby has been paired with an InstaShow Host before, it will turn static green.

3. Press the **PAIRING** key of the InstaShow Host for five seconds, the LED indicator of the InstaShow Host will blink blue for two minutes, waiting to pair with an InstaShow Button.

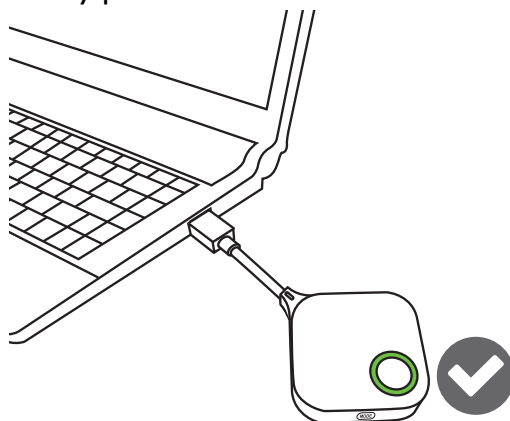

If the InstaShow Host is attached to the ceiling so that it is not easy to press the **PAIRING** key, please use the pairing process in the web management interface. Refer to [Pairing on page 45](#) for information.

4. Press the **MODE** key on the side of the InstaShow Button for five seconds. The LED indicator of the InstaShow Button will blink blue for about 10 seconds. The pairing process is ongoing. The “Pairing” message will be shown on the screen.

The images are for reference only. Each product has different serial number.

5. The LED indicator of the InstaShow Button turns static green when the InstaShow Host and InstaShow Button are successfully paired.

The maximum number of InstaShow Buttons you can pair with one InstaShow Host is 16.

## Waking up the InstaShow Host

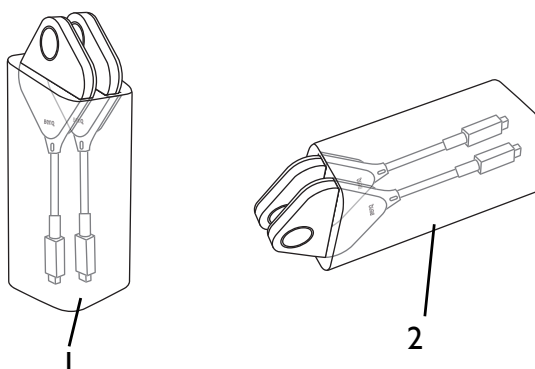

When the InstaShow Host's power indicator turns 50% static green, press the Present key of the InstaShow Button to start a presentation, and the InstaShow Host will wake up automatically.

More standby mode and wake up options are configurable via the web management user interface. Refer to [page 51](#) for information.

## Storing InstaShow Buttons in the cradle

You are provided with two different ways to store the InstaShow Buttons in the cradle. Place the InstaShow Buttons in the cradle vertically (1) or horizontally (2). See the illustrations.

## Resetting a InstaShow Host

Resetting an InstaShow Host allows you to return the InstaShow Host to its original factory settings. You may want to reset the InstaShow Host because of either one of the following reasons:

- You want to clear the web management interface of all changes made to its configurations, such as pairing information, passwords, SSID, Frame Rate, etc. and return it back to its default settings. Refer to [Web management on page 34](#) for more information.
- You are unable to access the web management interface (for instance due to an altered or lost password).

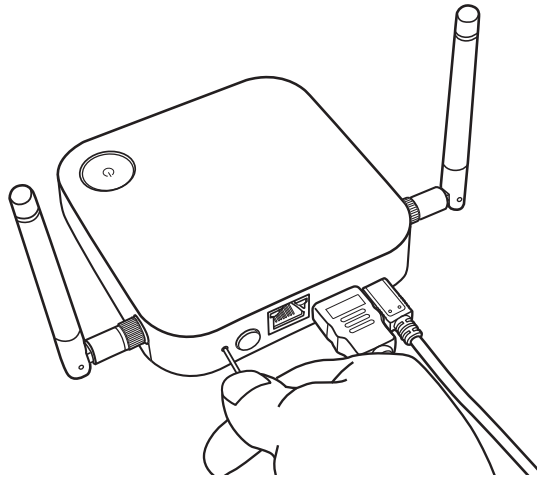

Reset the InstaShow Host using the following steps:

1. Connect the DC/Micro-USB port on the InstaShow Host to a power source and wait for at least 30 seconds.

After the InstaShow Host has been connected to a power source for at least 30 seconds, the InstaShow Host LED may indicate any one of the statuses described in [LED indicators of the InstaShow Button and InstaShow Host](#). As long as the InstaShow Host has been connected to a power source for at least 30 seconds, you may proceed to the next step of the resetting process regardless of the status of the InstaShow Host LED.

2. Poke the **RESET** hole at the rear of the InstaShow Host with a pin for at least 2 seconds.

3. The InstaShow Host LED will begin quick flashing red (flash red twice every second) for 10 seconds, then light up static red for 15 to 20 seconds, indicating that the InstaShow Host is resetting.
4. Once the InstaShow Host LED lights up static green the resetting process is complete.

Do not disconnect the InstaShow Host from its power source at any time during the resetting process.

## Resetting a InstaShow Button

Resetting an InstaShow Button allows you to return the InstaShow Button to its original factory settings. You may want to reset an InstaShow Button because it has been paired to a different InstaShow Host (one which was not originally included with the InstaShow Button in the package), and you want to quickly pair it back to its original InstaShow Host.

Reset an InstaShow Button using the following steps:

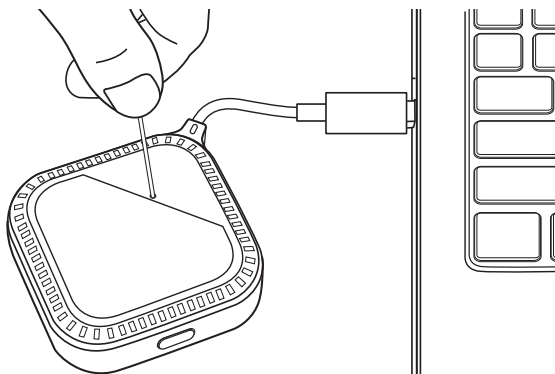

1. Place the InstaShow Button within range of the original InstaShow Host and ensure the LED on the InstaShow Host is static green.

2. Connect the USB-C™ connector on the InstaShow Button to a powered on laptop and wait for at least 30 seconds.

After the InstaShow Button has been connected to a powered on laptop for at least 30 seconds, the InstaShow Button LED may indicate any one of the statuses described in [LED indicators of the InstaShow Button and InstaShow Host](#). As long as the InstaShow Button has been connected to a powered on laptop for at least 30 seconds, you may proceed to the next step of the resetting process regardless of the status of the InstaShow Button LED.

3. Poke the **RESET** hole at the bottom of the InstaShow Button with a pin for at least 2 seconds.

4. The InstaShow Button LED will begin quick flashing red (flash red twice every second) for 10 seconds, then light up static red for 15 to 20 seconds, indicating that the InstaShow Button is resetting.

5. Once the InstaShow Button LED lights up static green the resetting process is complete.

You may also want to reset an InstaShow Button under either one of the following conditions:

- You purchased an additional InstaShow Button (via an InstaShow Button Kit) which has not been paired to an InstaShow Host.
- An InstaShow Button that was included in the original package has been paired to a different InstaShow Host (one which was not originally included with the InstaShow Button in the package), and you want to re-pair the InstaShow button to its original InstaShow Host while the InstaShow Host is not powered on.

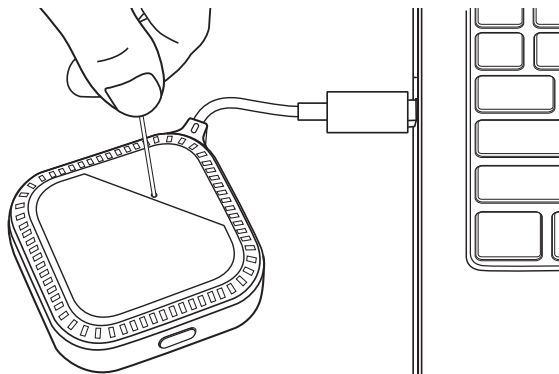

Under these conditions where the InstaShow Button is not connected to the corresponding InstaShow Host and its LED flashes red, use the following steps to reset the InstaShow button:

1. Connect the USB-C™ connector on the InstaShow Button to a powered on laptop and wait for at least 30 seconds.

After the InstaShow Button has been connected to a powered on laptop for at least 30 seconds, the InstaShow Button LED may indicate any one of the statuses described in [LED indicators of the InstaShow Button and InstaShow Host](#). As long as the InstaShow Button has been connected to a powered on laptop for at least 30 seconds, you may proceed to the next step of the resetting process regardless of the status of the InstaShow Button LED.

2. Poke the **RESET** hole at the bottom of the InstaShow Button with a pin for at least 2 seconds.

3. The InstaShow Button LED will begin quick flashing red (flash red twice every second) for 10 seconds, then light up static red for 15 to 20 seconds, indicating that the InstaShow Button is resetting.
4. Once the InstaShow Button LED flashes red the resetting process is complete.

---

Do not disconnect the InstaShow Button from its power source at any time during the resetting process.

---

# Starting and stopping presentations

This section will guide you on how to start and stop a presentation using InstaShow™.

## Getting ready

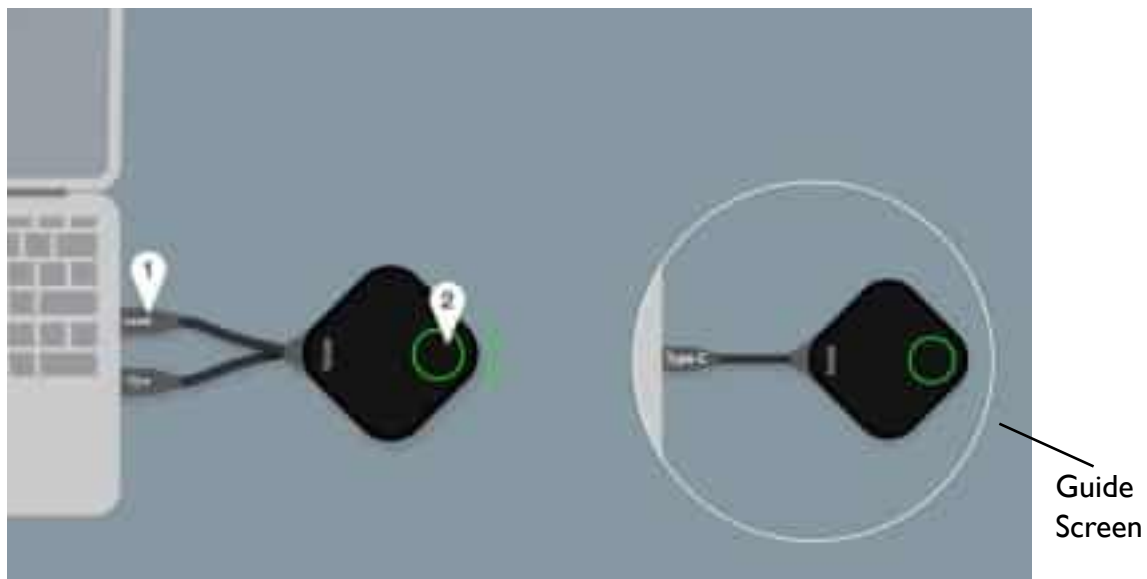

Make sure that all the connected devices have been powered on and ready for the presentation.

As your InstaShow™ could work with different projectors, IFPs, TVs, or monitors with standard HDMI ports, the steps required to start a presentation may vary according to the actual environment and your display specifications. Follow the procedures below and refer to the specified sections for details.

1. To start a presentation, see [Starting presentation on page 29](#) for details.
2. To stop a presentation, see [Idle presentation on page 31](#) for details.
3. To learn more about InstaVideo, see [Play video with InstaShow™ on page 32](#) for details.

## Starting presentation

1. Make sure power is supplied to the InstaShow Host. See [Connecting the HDMI cable and power on page 16](#) for more information.
2. Choose the HDMI source corresponding to the InstaShow Host on the display. You will see the Guide screen.

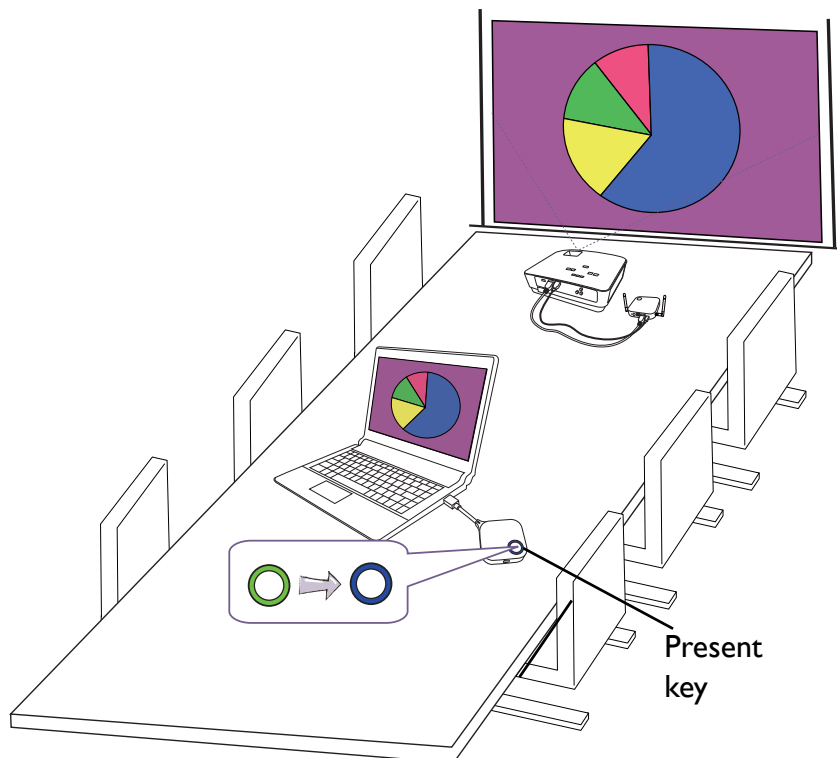

Depending on the purchased model, you may have different cable(s) on InstaShow Buttons. Connect the InstaShow Button's jack(s) to the corresponding input(s) of a laptop.

3. Please follow the instruction on the Guide screen to supply power to the InstaShow Button. You can also see [Setting up and powering an InstaShow Button on page 19](#) for more information. The LED indicator on the InstaShow Button is static green when the InstaShow Button is connected and working properly. You will then see the Idle screen.

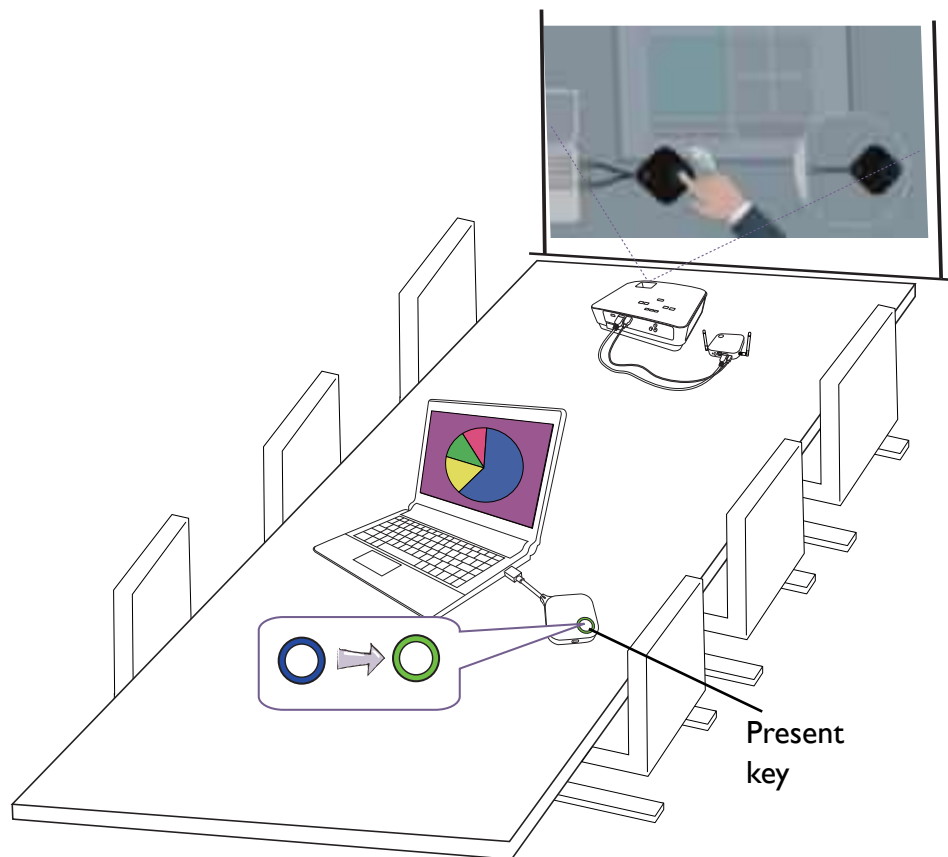

4. To start a presentation, press the Present key.
5. The device starts presenting, and the LED indicator of the InstaShow Button turns static blue.

- Make sure the transmission distance between the InstaShow Button and InstaShow Host is within 8M and with no obstacles.
- InstaShow™ supports MacBooks and Windows laptops to mirror an extended desktop.

## Idle presentation

1. To stop a presentation, press the Present key.
2. The device stops presenting, and the LED indicator of the InstaShow Button turns green.
3. Users can press the Present key to return to the presentation.

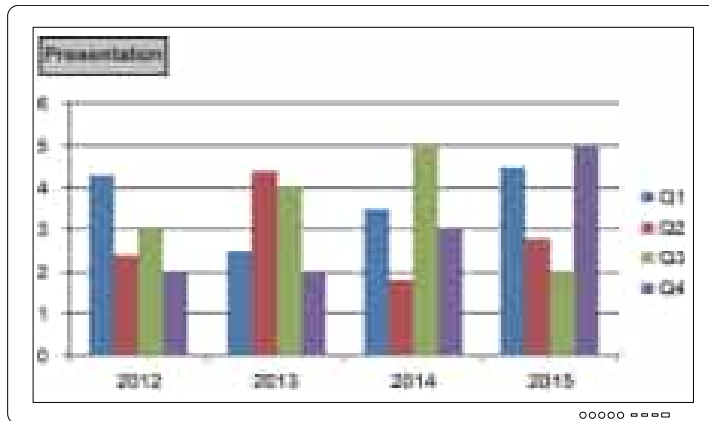

## Play video with InstaShow™

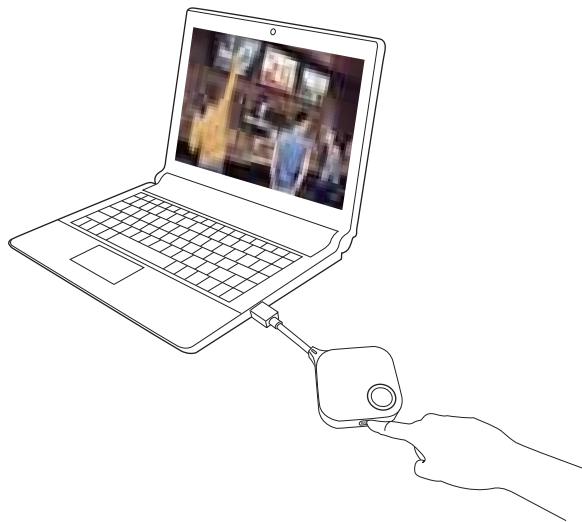

Our exclusive InstaVideo function optimizes InstaShow™'s audiovisual settings to instantly switch from clear **Presentation** mode to smooth **Video** mode with stereo sound at the click of a button without requiring IT support, cable clutter or complex software settings. By enabling presenters to quickly customize the projection for precise productivity or smooth wireless Full HD 1080p video, users can confidently blend text, graphs and charts, pictures, and multimedia audio and video without hesitation for the most effective meetings.

InstaVideo introduces two modes: **Presentation** mode and **Video** mode.

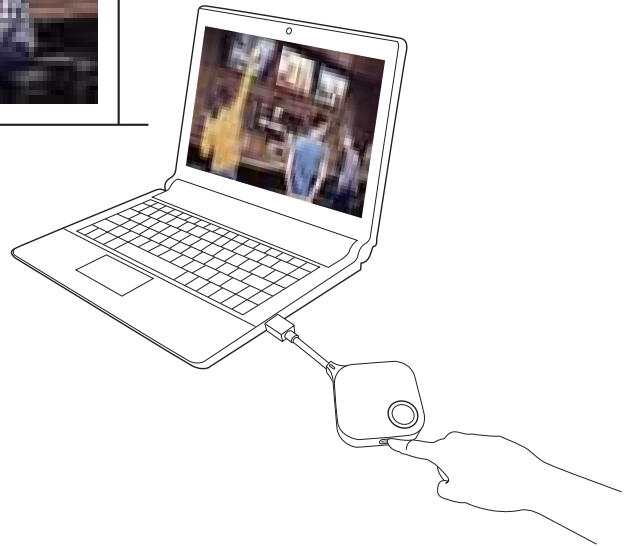

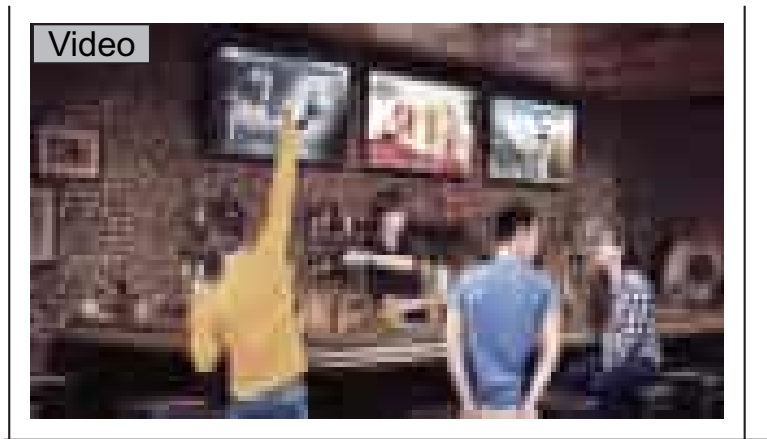

1. The default mode is **Presentation** mode. It presents clear document files.

2. If you want to view your full HD 1080p video projected smoothly, switch to **Video** mode by pressing the **MODE** key to proceed.

3. You can see the **Video** message on the upper left corner of the screen. Now you can play full HD 1080p videos smoothly.

InstaShow™ is primarily for the use of business presentation with documents such as PowerPoint, Word, Excel, PDF, and Full HD video clips. If users have home theater wireless video display demand, please contact local agent about BenQ WDP02 product for home entertainment usage.

# Web management

Your InstaShow™ is equipped with a web management interface that enables you to configure its features through a browser such as Google Chrome (version 49.0.26), Internet Explorer (version 8.0), or Firefox (version 46.0.1).

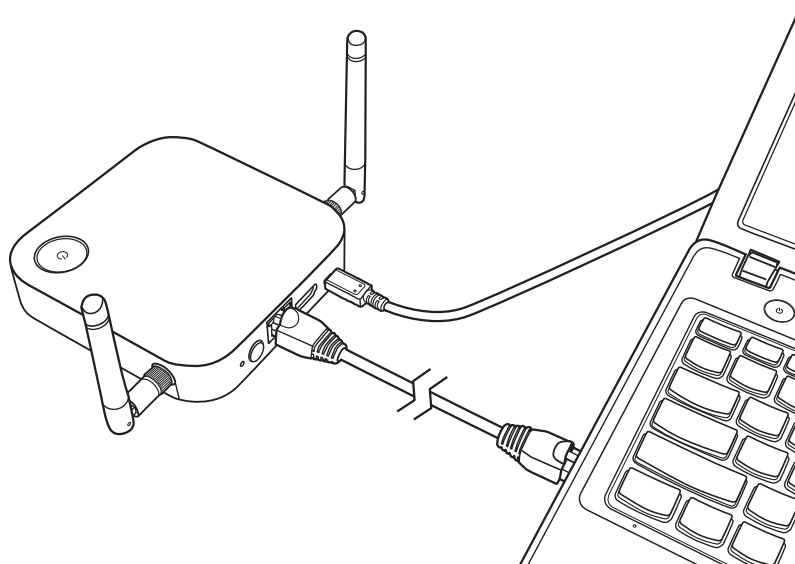

The features may vary according to different firmware versions.

---

## Accessing the web management interface

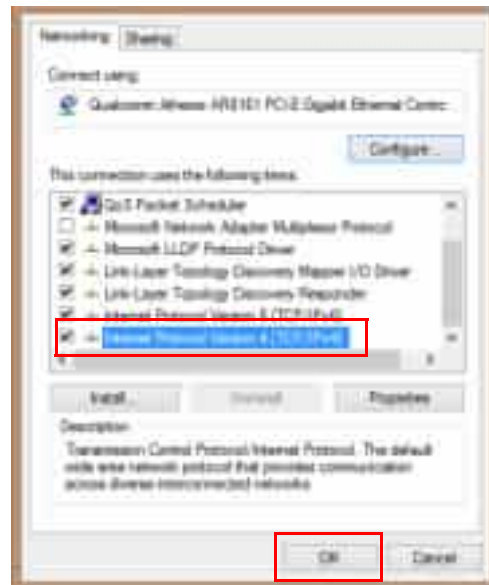

### Logging into the web management interface via direct connection

1. Connect your InstaShow Host directly to a laptop using a network cable (RJ-45) and to a power source using a USB A(M) to micro B(M) cable.

2. Wait until the LED indicator on your InstaShow Host lights up static green.

3. The default IP address of your InstaShow Host is 192.168.20.1. Change your laptop's IP address to 192.168.20.x (e.g. 192.168.20.100).

4. On your browser, enter the IP address: 192.168.20.1. On the login page, enter the default user name and password. The default user name is **admin** and the default password is either **0000** or the SSID with a name of “WDC10\_XXXXXX” (shown on the upper right corner of the Guide/Idle screen).\*

\*: To comply with regional-specific regulation requirements, the default **Web Management** password varies according to the product supplied for your region.

5. You will successfully log into the web management interface.

## Logging into the web management interface via LAN

If your InstaShow Host is connected to your LAN, you can enter the IP Address shown on the screen via a web browser.

Depending on the **HTTP over SSL** setting from **Advance Setting** (see [page 53](#)), different communication protocol is used to log into web management.

- **HTTP over SSL is On**, enter **https://<InstaShow Host IP address>**. Ignore the warning message if it says your connection is not private or secure. The data encryption is activated once this function is enabled. The warning message is displayed because your browser expects an SSL certificate from certain authorities to verify the connected device. The self-signed certificate generated by InstaShow Host does not meet the default security policy.
- **HTTP over SSL is Off**, enter **http://<InstaShow Host IP address>**.

## Logging into the web management interface via a wireless network

InstaShow™ only supports 802.11ac. If your laptop or mobile device has 802.11ac (5G Wi-Fi) wireless capability, you can locate the InstaShow Host via the WDC10\_XXXXXX SSID (shown on the upper right corner of the Guide/Idle screen) in your laptop or mobile device's wireless network menu and connect to it. The default password is the same as the name of the SSID (for example, if the SSID is "WDC10\_02A00C", the password will be "WDC10\_02A00C"). When the device is connected to the InstaShow Host, enter the IP Address, "192.168.168.2" in a web browser, then enter the user name and password as shown in step 4 of [Logging into the web management interface via direct connection on page 34](#).

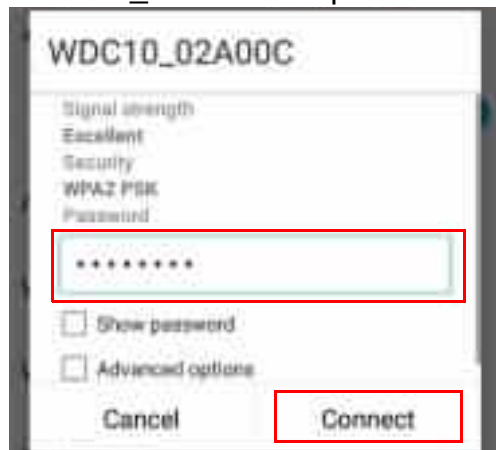

When an InstaShow Host is properly installed it will broadcast 2 separate SSIDs: one for access to the web management interface (with a name of "WDC10\_XXXXXX"), and another used for data transfer between the InstaShow Host and InstaShow Buttons (with a name of "WHE\_AP\_5G\_XXXXXX"). For access to the web management interface ensure that your laptop or mobile device only connects to the "WDC10\_XXXXXX" SSID.

The following is an example of how you can log into the web management interface via a mobile device with IEEE 802.11ac.

1. Go to **Settings > Wi-Fi**, and you can find the SSID of your InstaShow Host: WDC10\_02A00C.

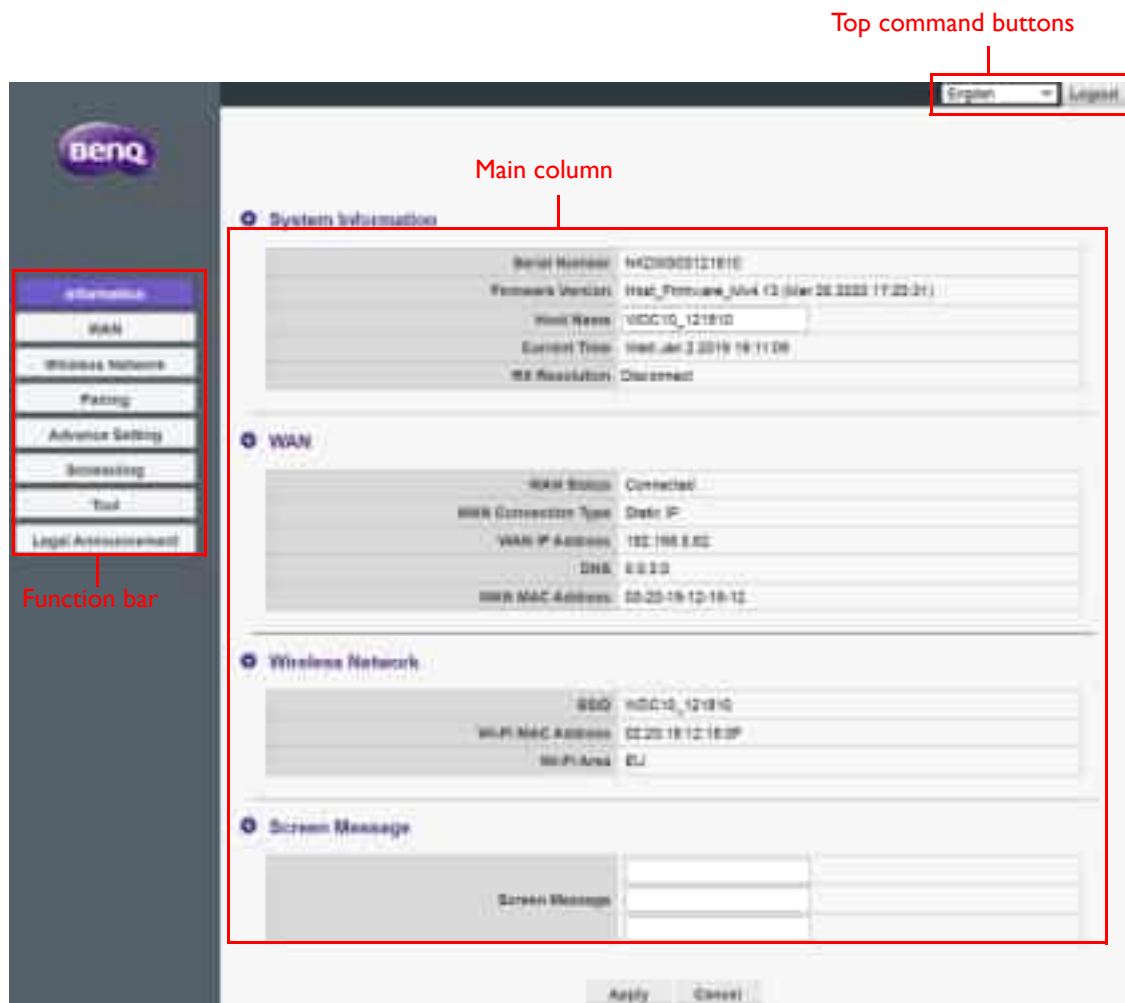

2. Enter the default password "WDC10\_02A00C" and press **Connect**.

3. Access the web management interface following step 4-5 of [Logging into the web management interface via direct connection on page 34](#).

## Getting started

You can now use the web management interface to configure various settings of your InstaShow Host.

## Top command buttons

### Change language

1. The default language is English. To change the interface language, go to the language settings panel and you can see all available languages.
2. Click the language you want to switch to and your new language will be set.
3. Once a new language has been set both the web management interface and InstaShow™ OSD will feature the new language.

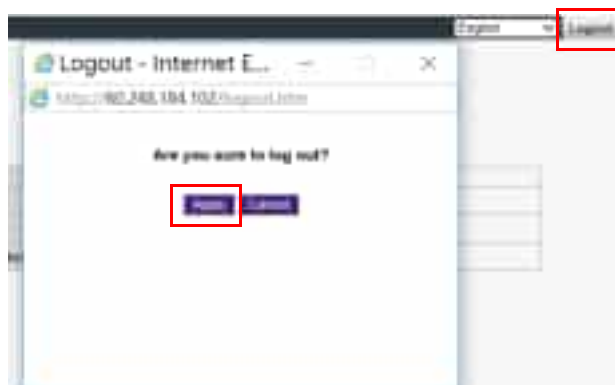

Supported languages vary by country/region where you purchase.

### Logging out

1. Click **Logout** on the upper right corner.

2. A confirmation window will pop up. Press **Apply** to log out.

## Main column

The main column shows the detailed content from the function bar.

## Function bar

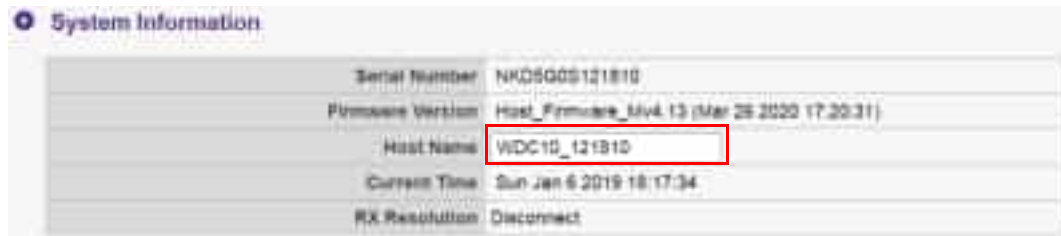

### Information

Click **Information** and you will see detailed information for **System Information**, **WAN**, **Wireless Network**, and **Screen Message**.

You can change the **Host Name** under **System Information**. If the Host detects resolution information being transmitted from a computer via a Button, you can find out the resolution

information from **RX Resolution**. If the source connection is made but the device is not presenting, it shows **Disconnect** in **RX Resolution**.

Serial Number	NKDSG00S121B10
Firmware Version	Host_Firmware_Mv4.13 (Mar 28 2020 17:20:31)
Host Name	WDC10_121B10
Current Time	Sun Jan 6 2019 18:17:34
RX Resolution	Disconnect

You can enter messages under **Screen Message**. After filling in a message, press **Apply** to proceed. Your message will be shown on the upper right corner of Guide/Idle Screen above SSID.

Screen Message

Apply Cancel

 For **Screen Message**, the maximum lines allowed are 3, and the maximum number of characters allowed per line is 19.

## WAN

Click **WAN** and you will see the default **WAN IP Address** of the InstaShow Host. The default connection type is DHCP. Acquire the IP Address from your DHCP server of your network. If you want to change your **WAN IP Address**, choose **Static IP** under **WAN Connection Type**. You

can input your domain name service (DNS) manually. If the information in **DNS** shows **0.0.0.0**, it means the system gets DNS IP address automatically from the server. Press **Apply** to proceed.

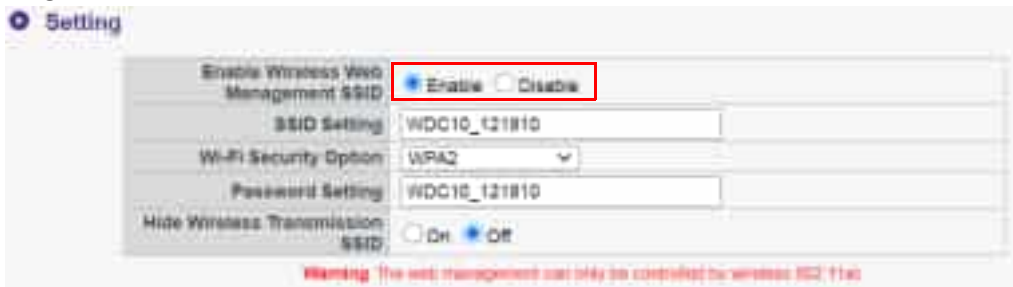

## Wireless Network

Click **Wireless Network** and you will see the **Setting** and **Wi-Fi Radio Setup** menu for the InstaShow Host.

You can **Enable** or **Disable** a Wi-Fi connection to the InstaShow Host via **Enable**. The descriptions for each setting is described below:

Setting	Description
<b>Enable</b>	The InstaShow Host broadcasts its SSID which allows users to log into the web management interface via a wireless network. Refer to <a href="#">Logging into the web management interface via a wireless network on page 38</a> for more information.

Setting	Description
<b>Disable</b>	The InstaShow Host deactivates its SSID which prohibits users from logging into the web management interface via a wireless network. When <b>Wireless Network</b> is disabled users will only be able to log into the web management interface via direct connection or LAN. Refer to <a href="#">Logging into the web management interface via direct connection on page 34</a> or <a href="#">Logging into the web management interface via LAN on page 37</a> for more information.

When **Wireless Network** is enabled you can rename the SSID of the Wi-Fi signal via **SSID Setting**.

To hide the SSID generated by the Host and used for data transfer (with a name of “WHE\_AP\_5G\_XXXXXX”), set **Hide Wireless Transmission SSID** to **Off**.

The InstaShow Host automatically generates an SSID used for data transfer between the InstaShow Host and InstaShow Buttons (with a name of “WHE\_AP\_5G\_XXXXXX”) which is separate from the SSID used for the web management interface’s wireless connection. This SSID is not displayed in the **Wireless Network** menu as it cannot be changed or edited.

**Wi-Fi Security Option** provides the user **WPA2** and **WPA2\_Enterprise** security options for the InstaShow Host’s wireless connection when users access the web management interface via a wireless network.

The screenshot shows the 'Setting' page with the 'Wi-Fi Security Option' dropdown menu open. The menu is currently set to 'WPA2'. The options visible are 'WPA2' and 'WPA2\_Enterprise'. A red box highlights the dropdown menu.

**WPA2** enables WPA2-PSK (pre-shared key) which uses an Advanced Encryption Standard (AES) encryption method.

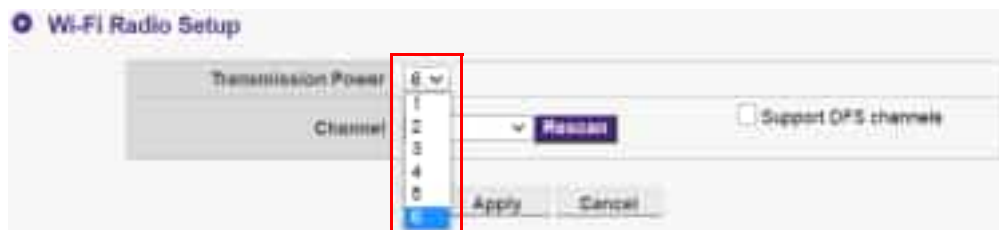

**WPA2\_Enterprise** allows users to get a unique key for a network that needs critical authentication. For RADIUS server settings, contact your IT department for actual settings.

The screenshot shows the 'Setting' page with the 'Wi-Fi Security Option' dropdown menu open. The menu is currently set to 'WPA2\_Enterprise'. The options visible are 'WPA2' and 'WPA2\_Enterprise'. A red box highlights the dropdown menu.

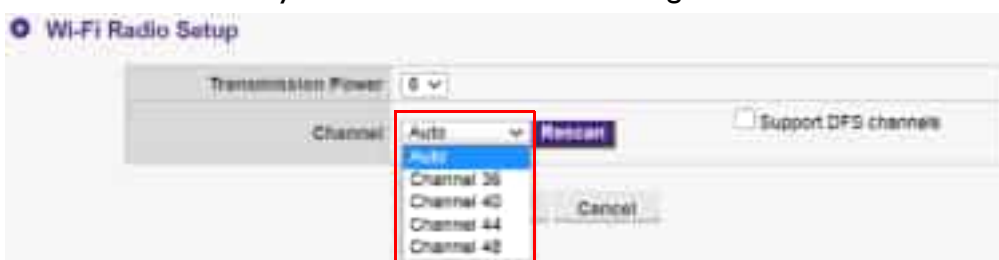

The Wi-Fi security options described above only applies to the Wi-Fi connection used to access the web management interface via a wireless network. The Wi-Fi connection used for data transfer between the InstaShow Host and InstaShow Buttons utilizes a fixed WPA2-PSK security setting which cannot be changed.

In **Wi-Fi Radio Setup**, you can change **Transmission Power** from 1-6 (6 being the strongest). In the real network environment, every scale-up can increase the signal strength between 1-3 dBm. For example, changing **Transmission Power** from 1 to 2 can increase the signal strength around 2 dBm in real measurement.

In **Channel**, you can configure the InstaShow Host to automatically select the wireless channel with the best performance during the initial setup of the InstaShow Host by selecting **Auto**, or you can select a wireless channel manually. The default **Channel** setting for the InstaShow Host is **Auto**.

In cases when the broadcast of a presentation is unstable or choppy, due to interference to the wireless connection between the InstaShow Host and InstaShow Button from other wireless devices in the area, users can switch the **Channel** by pressing **Rescan**. By pressing **Rescan** the InstaShow Host will switch to the wireless channel with the best performance and least interference at the time.

In certain regions/countries, if you are able to use DFS channels (usually reserved for radars) for wireless transmission according to regional regulations, the **Support DFS channels** option is available to you. Note that while this function is supported and enabled, the transmission stops if a radar is using the same channel and you are forced to leave the channel. It takes awhile before you can re-connect to the same channel. You are not recommended to enable this function if you are not sure about the radar signals in the same area.

- After pressing **Rescan**, the broadcast of the presentation will be interrupted for a few seconds and the LED on the InstaShow Host will flash red then light up static green. Press the Present key on the InstaShow Button afterwards to resume the presentation.

- Supported wireless channels listed may vary according to wireless regulations of the country/region.

After you configure all the **Wireless Network** settings, press **Apply** to proceed.

**Setting**

Enable Wireless Web Management SSID: ☒ Enable ☐ Disable

SSID Setting: WDC10\_121810

WIFI Security Option: WPA2

Password Setting: WDC10\_121810

Hide Wireless Transmission SSID: ☒ On ☐ Off

**Warning:** This web management can only be controlled by wireless SSID 11ac

**Wi-Fi Radio Setup**

Transmission Power: 5

Channel: AUTO **Restart**

☐ Support DFS channels

**Apply** **Cancel**

## Pairing

Click **Pairing** and you will see **Pairing** and **Pairing Status**.

**Pairing**

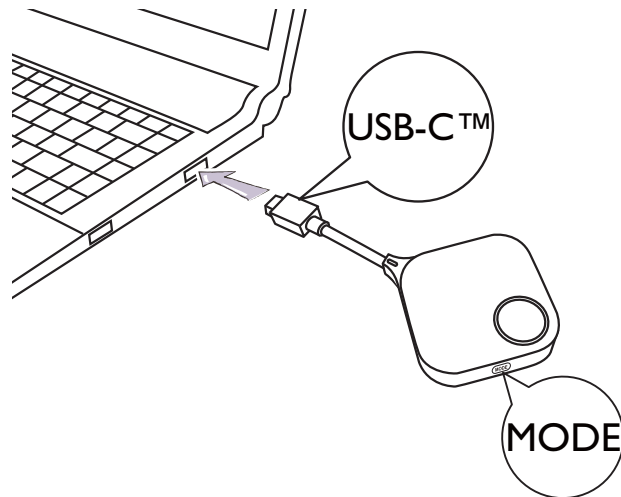

**Start pairing**

**Pairing Status**

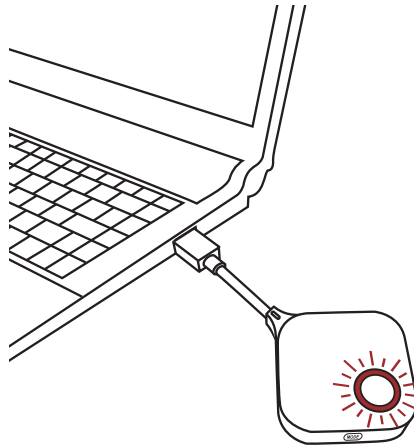

Status	Serial Number	MAC Address	Firmware Version	EDID Status	Delete
Disconnected		00:30:18:12:18:1B		Not sync	
Disconnected		00:30:18:12:18:1A		Not sync	
Connected	WDC6K10104030	00:0E:A0:07:EE:48	Button_Firmware_V04.13	Sync	

**Pairing** is used when the InstaShow Host is attached to the ceiling as it is not easy to press the **PAIRING** key of the InstaShow Host when the device is high on the ceiling. You can pair a InstaShow Button and InstaShow Host via the web management interface. See [Advance Setting on page 48](#) for more information about EDID status.

1. Connect the InstaShow Button's USB-C™ jack to the corresponding port of a laptop.

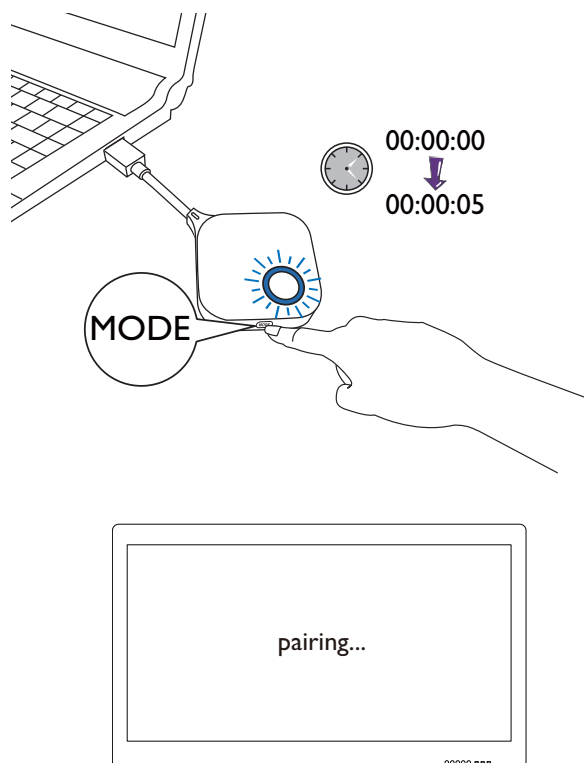

2. When the InstaShow Button is successfully connected to the laptop, the LED indicator of the InstaShow Button will blink red.

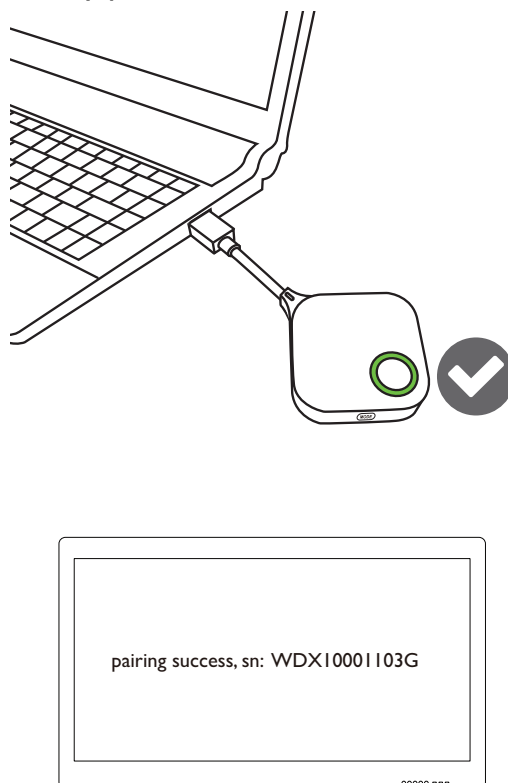

3. Make sure the InstaShow Host is properly connected to a power source.
4. Press **start pairing** to pair the InstaShow Host to the InstaShow Button via the web management interface, you will have two minutes to pair with the InstaShow Button.

5. Press the **MODE** key on the side of the InstaShow Button for five seconds. The LED indicator of the InstaShow Button will blink blue for about 10 seconds. The pairing process is ongoing. A “Pairing” message will be shown on the screen.

6. The LED indicator of the InstaShow Button will turn static green when the InstaShow Host and InstaShow Button are successfully paired.

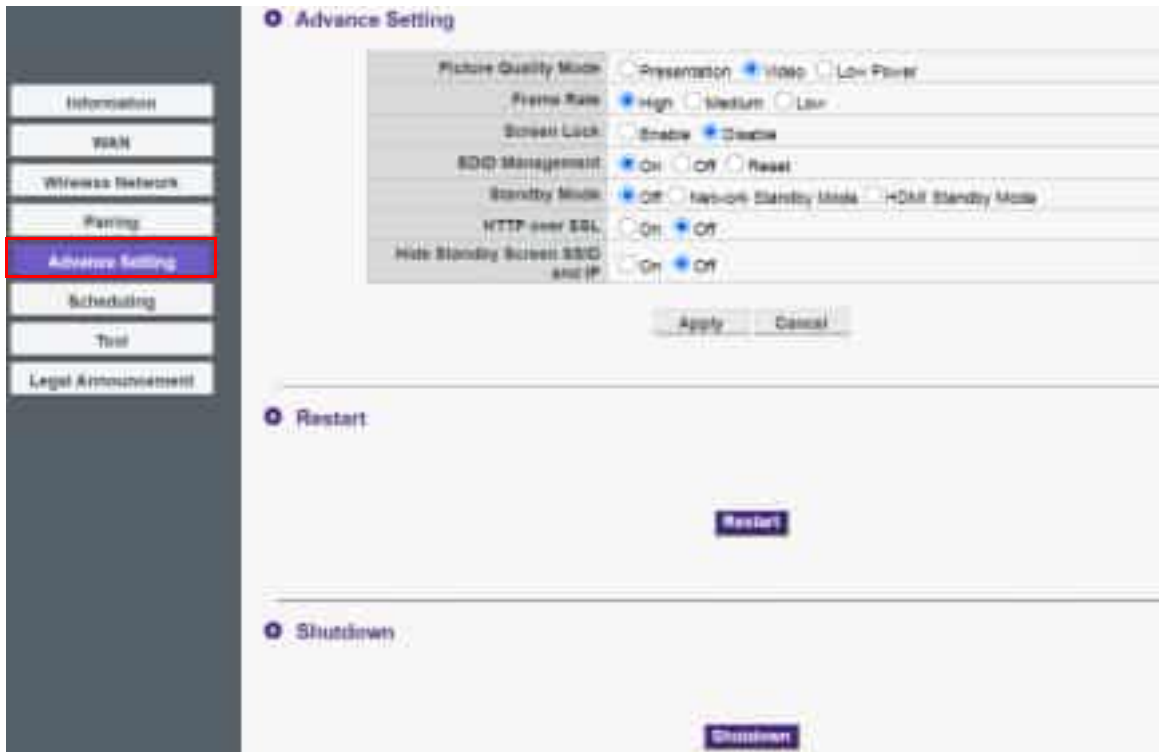

- Images are for reference only. Each product features a different serial number.
- The maximum number of InstaShow Buttons you can pair with one InstaShow Host is 16.

7. You may press **stop pairing** anytime to stop the pairing process.

## Advance Setting

Click **Advance Setting** to adjust picture quality and security settings.

You can change mode to **Presentation** mode, **Video** mode, and **Low Power** via **Picture Quality Mode**. The default mode is **Presentation** mode. Be aware that after the firmware is upgraded to v2.01, the default mode will be changed to **Video** mode. The mode set by **Picture Quality Mode** in web management is the default mode next time when the InstaShow host restarts. That is, if the mode is **Video** mode and is switched to **Presentation** mode by the InstaShow button while playing

files, the mode will remain **Video** mode next time the host restarts. A description for the scenarios that are suitable for each mode is described below:

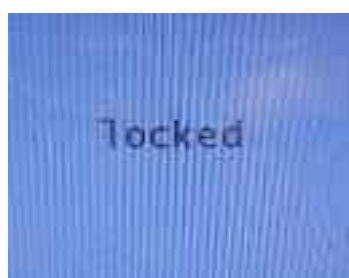

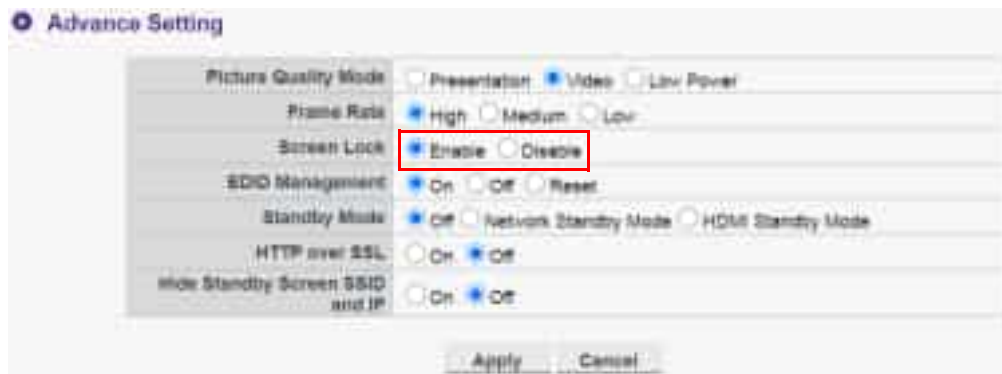

Mode	Scenario
<b>Presentation</b> mode	For use when highly detailed visuals are necessary.
<b>Video</b> mode	For use when smooth video playback is necessary.
<b>Low Power</b> mode	For use when low power consumption is necessary, such as when the laptop which the InstaShow Button is connected to only features a USB 2.0 power connection. The use of <b>Low Power</b> mode will result in a lower display quality and choppy video than <b>Presentation</b> mode and <b>Video</b> mode.   When <b>Low Power</b> mode is selected, <b>Picture Quality Mode</b> cannot be changed via the <b>MODE</b> key located on the InstaShow Button. If the user presses the <b>MODE</b> key, the OSD will display the warning icon shown below in the upper left-hand corner:  

**Frame Rate** controls the smoothness of video broadcast by the InstaShow Host. When **Video** mode is selected you can change the **Frame Rate** for the video broadcast to **High**, **Medium**, or **Low**. A higher frame rate features video with smoother motion, while a lower frame rate features video with choppy motion.

 **Frame Rate** is only adjustable (its default value is set to **High**) when **Video** mode is selected. The **Frame Rate** for **Presentation** mode and **Low Power** mode are both fixed to **Low** and cannot be adjusted.

**Screen Lock** allows you to control the availability of the InstaShow Host for use. When **Enable** is selected, use of the InstaShow Host for presentation purposes will be prohibited and a lock screen will be broadcast by the InstaShow Host (as shown below) as the LED flashes red. When **Disable** is selected, normal use of the InstaShow Host is allowed.

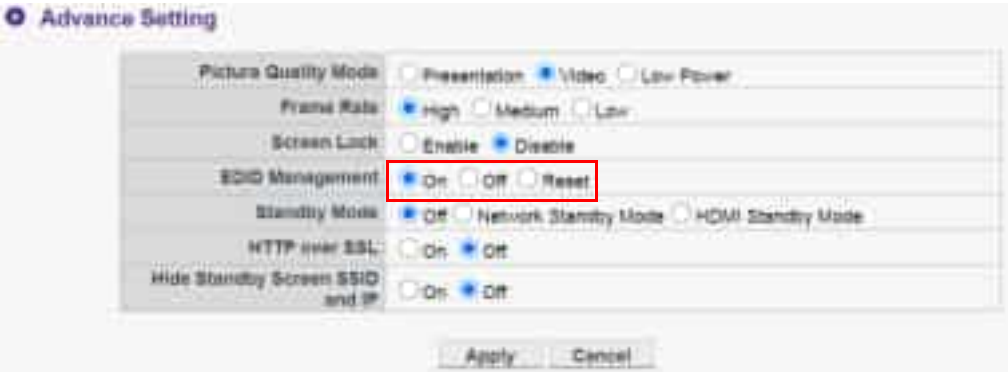

EDID (Extended Display Identification Data) is the data provided by digital displays (e.g. projectors, TVs, etc) to indicate their capabilities to its media source.

When properly connected InstaShow™ delivers HDMI signals from your video source (i.e. laptop, etc.) to the HDMI display. In order to deliver the optimal audio and video format supported by the InstaShow Host, InstaShow button, and HDMI display, the InstaShow Host reads the EDID data provided by the connected HDMI display and determines the optimal video resolution and audio format based on the video resolution and audio format supported by InstaShow™. Once the InstaShow Host decides the optimal video resolution and audio format, the revised EDID will be sent to the InstaShow Button to replace the old EDID. The video source (i.e. laptop, etc.) then automatically outputs the best or suggested video resolution based on the EDID of the connected HDMI display.

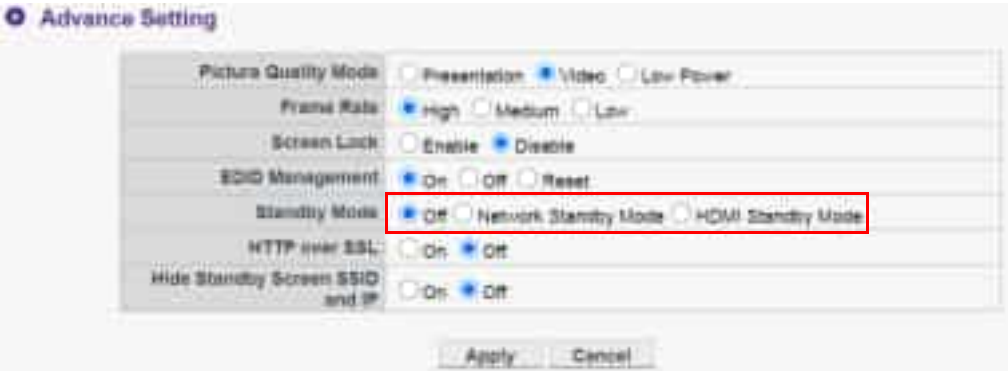

In order to check the EDID status, the InstaShow Host reads the EDID whenever a display is plugged in, unplugged, or powered on/off. Whenever the InstaShow Host discovers that the EDID of a connected display has changed (i.e. when there has been a change of display), the InstaShow Button's EDID will be updated when the InstaShow Button or InstaShow Host restarts.

You are suggested to have **EDID Management On** to sync the EDID of the InstaShow Button and the display. If you have **EDID Management Off**, EDID will not be changed. If you have **EDID Management Reset**, EDID will be restored to factory default setting.

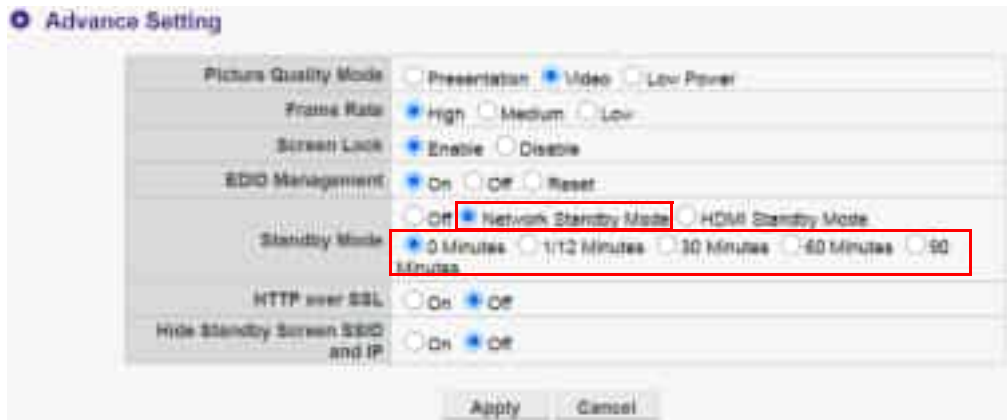

Setting	Description
On (Default)	InstaShow™ automatically configures the source notebook's resolution setting to match the display device pixel-by-pixel for perfectly clear picture quality.
Off	InstaShow™ do not configure the source notebook's resolution setting to match the display device pixel-by-pixel for perfectly clear picture quality.
Reset	EDID will be restored to factory default setting.

**Standby Mode** allows you to set the conditions that place the InstaShow Host in standby. You can have your **Standby Mode Off** to prevent the InstaShow Host from going into standby or choose between **Network Standby Mode** and **HDMI Standby Mode**.

**Network Standby Mode** disables the HDMI output from the InstaShow Host after a set amount of time in which there is no connection with an InstaShow Button. When the InstaShow Host is in

**Network Standby Mode** the LED will light up 50% static green and power consumption will be roughly 2W. Set the time according to the available options in **Standby Mode**.

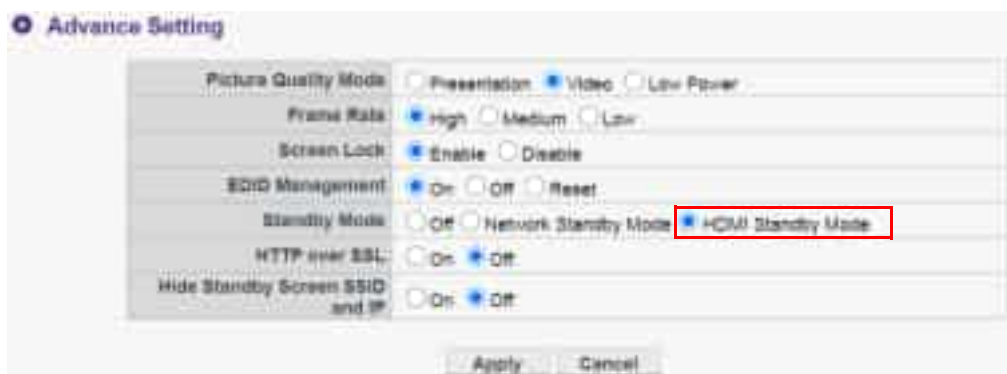

The InstaShow Host will enter **Network Standby Mode** under the following conditions:

- The InstaShow Host has broadcast the Guide screen or Idle screen for the amount of time set in the **Standby Mode** field. In this circumstance the connected display will usually enter standby or power saving mode after a set period of time based on the configured settings for the display.

The InstaShow Host will wake up from **Network Standby Mode** under the following conditions:

- A wireless connection is made between the InstaShow Host and an InstaShow Button (the LEDs on both the InstaShow Host and InstaShow Button are lit up static blue).

**HDMI Standby Mode**, places the InstaShow Host in standby mode if there is no HDMI signal/ connection to the InstaShow Host for at least 10 minutes. When the InstaShow Host is in **HDMI Standby Mode** the LED will be off and power consumption will be less than 0.5W.

The InstaShow Host will enter **HDMI Standby Mode** under either one of the following conditions:

- No HDMI cable connection is made between the InstaShow Host and a display for at least 10 minutes.
- The display which is connected to the InstaShow Host is powered off for at least 10 minutes.

The InstaShow Host will wake up from **HDMI Standby Mode** under either one of the following conditions:

- The display which is connected to the InstaShow Host is powered on.
- The power button on the InstaShow Host is pressed.

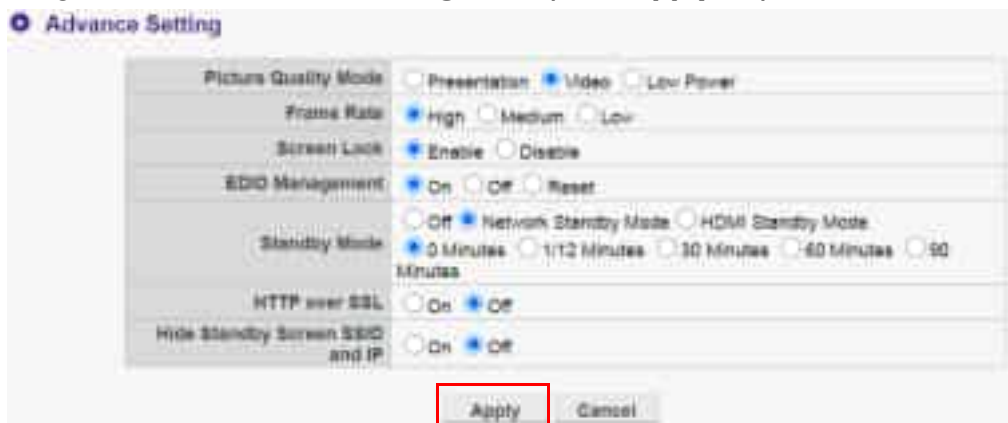

- The power cable connected to the InstaShow Host is disconnected then reconnected.

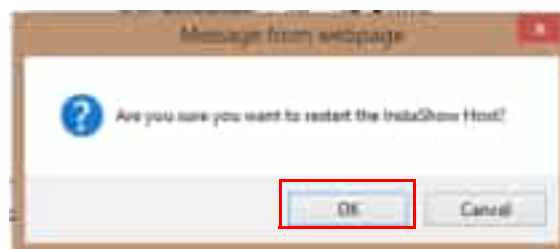

- In cases where users want to conserve energy, **Network Standby Mode** is a suitable mode as the power consumption for a display (e.g. projectors, TVs, monitors, etc.) is usually greater than the power consumption for the InstaShow Host (5V/1.5A).
- In cases where the InstaShow Host is attached to a ceiling or the power button is out of reach by the user, **HDMI Standby Mode** is a suitable mode as it allows the user to power off the InstaShow Host by powering off the display.

To increase security, you can select **On** from **HTTP over SSL** to encrypt your content transmitted between the server and the browser. And you can hide SSID and IP on standby screen by setting **Hide Standby Screen SSID and IP** to **On**.

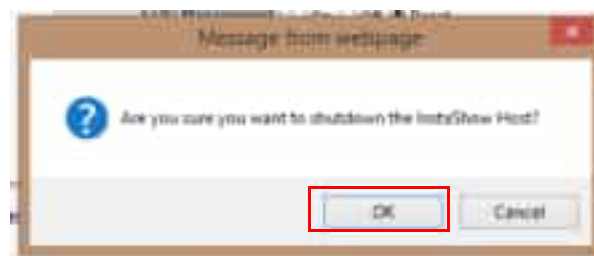

After you configure all the **Advance Setting** items, press **Apply** to proceed.

If you want to restart the InstaShow Host, press **Restart** and a window will pop up. Press **OK** to proceed.

If you want to shutdown the InstaShow Host, press **Shutdown** and a window will pop up. Press **OK** to proceed.

## Scheduling

You can change the schedule by clicking **Scheduling**. You can set **System Time** and **Periodical Restart**.

The screenshot shows the 'Scheduling' configuration page. On the left is a sidebar with menu items: Information, WAN, Wireless Network, Porting, Advanced Setting, **Scheduling** (highlighted with a red box), Tool, and Legal Announcement. The main content area has two sections: 'System Time' and 'Periodical Restart'. The 'System Time' section includes a 'Time Zone' dropdown set to 'Greenwich Mean Time: London (GMT+00:00)', a 'Daylight Saving' section with 'Enable from' and 'End on' date pickers, and an 'NTP Server' dropdown set to 'europe.pool.ntp.org'. The 'Periodical Restart' section shows the 'Current Time' as 'Sun Jan 6 2019 23:52:58', 'Enable' radio buttons with 'Disable' selected, a 'Restart at' section with two '00' input fields and '(24-Hour Format)' text, and a row of checkboxes for 'Everyday', 'Sun.', 'Mon.', 'Tue.', 'Wed.', 'Thu.', 'Fri.', and 'Sat.'. 'Apply' and 'Cancel' buttons are at the bottom right.

You can select your **Time Zone** and check **Enable** to set **Daylight Saving**. Select a time server from the available **NTP Server** options or input one manually to sync the system time between the Host and the browser.

This close-up screenshot focuses on the 'System Time' section. It shows the 'Time Zone' dropdown set to 'Greenwich Mean Time: London (GMT+00:00)'. The 'Daylight Saving' section has 'Enable from' and 'End on' date pickers, both currently empty. The 'NTP Server' dropdown is set to 'europe.pool.ntp.org'. Red boxes highlight the 'Daylight Saving' and 'NTP Server' areas.

You can check **Enable** to set **Periodical Restart**. You can also set restart time and day.

This close-up screenshot focuses on the 'Periodical Restart' section. It shows the 'Current Time' as 'Mon Jan 7 2019 19:58:56'. The 'Enable' radio buttons have 'Enable' selected. The 'Restart at' section has two '00' input fields and '(24-Hour Format)' text. Below this is a row of checkboxes for 'Everyday', 'Sun.', 'Mon.', 'Tue.', 'Wed.', 'Thu.', 'Fri.', and 'Sat.'. Red boxes highlight the 'Enable' radio buttons, the 'Restart at' input fields, and the row of checkboxes.

After you configure all the **Scheduling** settings, press **Apply** to proceed.

**System Time**

Time Zone: Greenwich Mean Time, London (GMT+00:00) ▼

Daylight Saving: ☐ Enable from 00 (Month) 01 (Day) to 00 (Month) 01 (Day)

NTP Server: europe.pool.ntp.org ▼

**Periodical Restart**

Current Time: Sun Jan 6 2019 23:52:58

Enable: ☐ Enable ☒ Disable

Restart at: 00:00 (24-hour Format)

☐ Everyday ☐ Sun ☐ Mon ☐ Tue ☐ Wed ☐ Thu ☐ Fri ☐ Sat

**Apply** **Cancel**

## Tool

By clicking **Tool**, you can adjust **Password Setup**, **Firmware Upgrade**, **Configuration Export**, and **Log Setting**.

**Tool**

- 1 Password Setup
- Firmware Upgrade
- Configuration Export
- Log Setting

**Password Setup**

User Name: admin

Password:

New Password:

Confirm New Password:

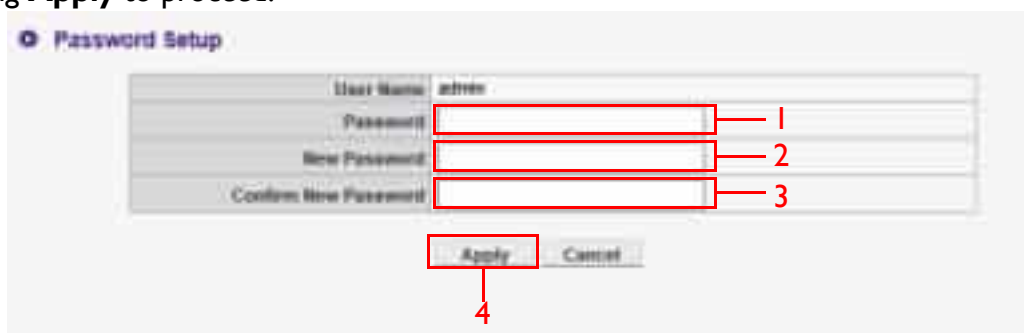

**Apply** **Cancel**

### • Password Setup

You can change **Password** by:

1. Entering your old **Password**.
2. Entering your **New Password**.
3. Entering your **New Password** again to **Confirm New Password**.

- Pressing **Apply** to proceed.

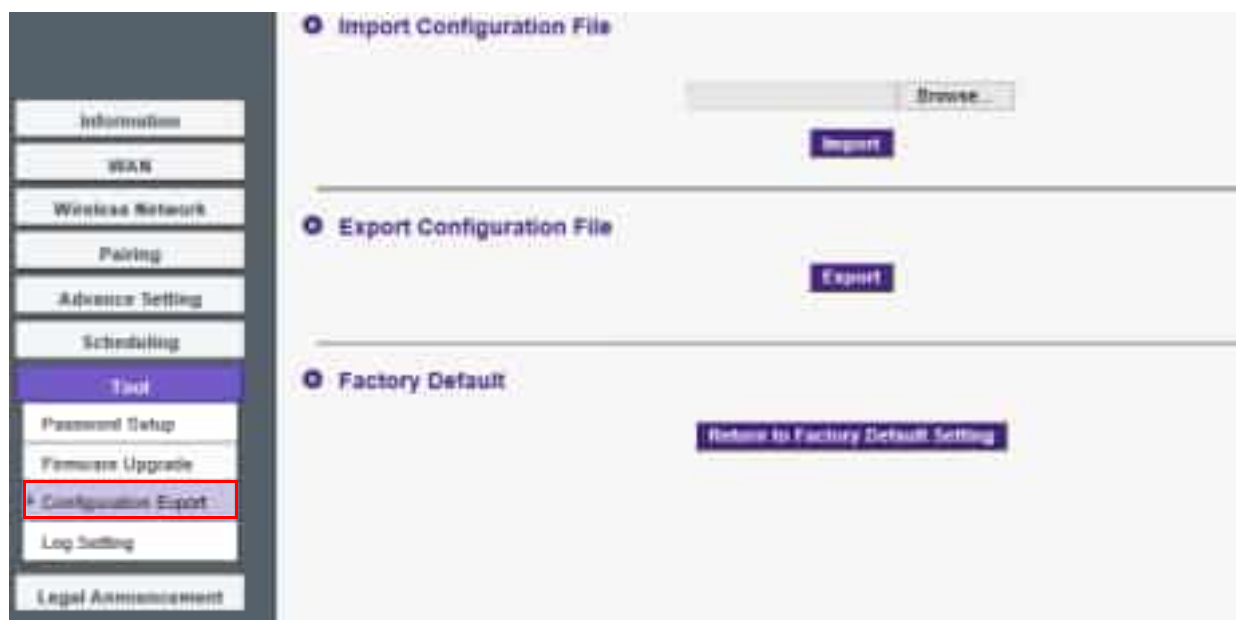

### • Firmware Upgrade

To upgrade the product firmware, please contact BenQ Customer Service or authorized service partner for assistance.

### • Configuration Export

Configuration export files feature all the configuration settings for your InstaShow Host except for the host name, SSID and wireless password settings, and pairing status. In **Configuration Export**, you can choose **Import Configuration File**, **Export Configuration File**, and **Factory Default**.

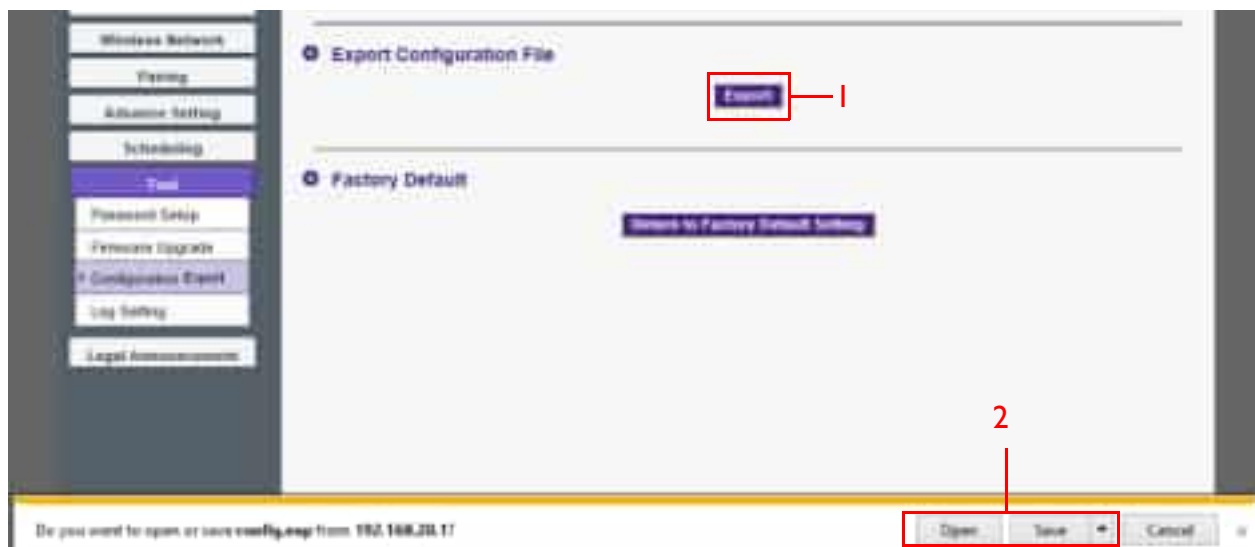

You can set **Import Configuration File** by:

- Pressing **Browse** and choose the file to import.
- Pressing **Import** to proceed.

You can set **Export Configuration File** by:

1. Pressing **Export**.
2. Choosing **Open** or **Save** the .exp file.

3. The following set values will not be exported:

a.	<b>Information: Host Name</b>
b.	<b>Wireless Network:</b> SSID setting and password setting
c.	<b>Pairing: Pairing Status</b>

You can have the InstaShow Host restore to **Factory Default** by pressing **Return to Factory Default Setting**. Once you press the **Return to Factory Default Setting** button, a confirmation window will pop up.

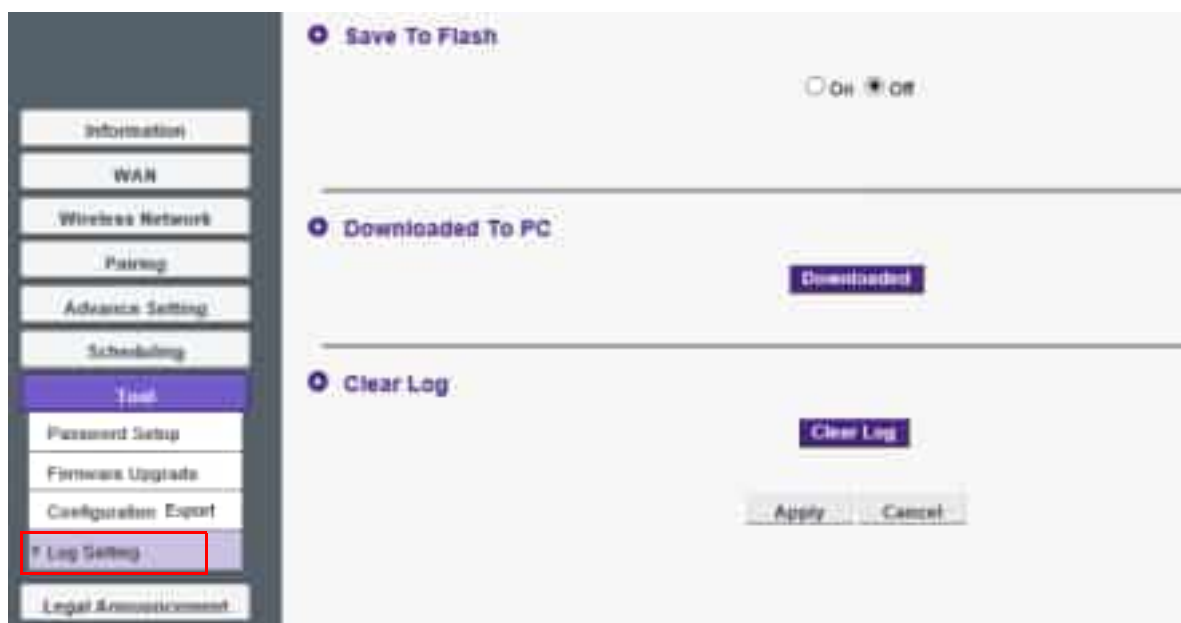

When the process is confirmed the InstaShow Host will begin restoring to **Factory Default** and the LED will quick flash red (flash red twice every second) then restart. After the InstaShow Host restarts the entire process is complete.

## • Log Setting

Logs are records of all system activity for your InstaShow Host, which may be used by support technicians to track errors or locate bugs. In **Log Setting**, log can be set to **Save To Flash**, **Downloaded To PC**, and **Clear Log**.

a.	<b>Save To Flash: On</b>	Allow the InstaShow Host to save the current log into the flash memory. In other words, If the InstaShow Host restarts, the last log will be kept and can be exported by <b>Downloaded To PC</b> .
b.	<b>Save To Flash: Off</b>	If the InstaShow Host restarts, the last log will disappear and only the current log can be kept and available to be exported by <b>Downloaded To PC</b> .

## Legal Announcement

For information about disclaimer or privacy policy, press **Legal Announcement** to find out more.

# Troubleshooting

Category	Problem	Cause	Solution
Your screen	Your screen is not appearing on the display when pressing the InstaShow Button.	The system is locked.	<b>Web Management &gt; Advanced Setting&gt; Screen Lock &gt; Disable</b>
		The InstaShow Button is connecting to another InstaShow Host.	The InstaShow Button should be paired again with the InstaShow Host.
		Pressing time is not enough.	Press the Present key until the LED indicator turns from green to blue.
	The screen turns blank or flickers when the InstaShow Host is presenting (power connect through USB type A not guaranteed with 5V 1.5A).	Insufficient power supply	Change power supply of the InstaShow Host to a power adapter.
	The screen lags seriously and the audio breaks up sometimes.	Wi-Fi interference or signal attenuation	<ul style="list-style-type: none"> <li>• Make sure the transmission distance is within 8M and with no obstacles.</li> <li>• Restart the InstaShow Host in order to rescan the Wi-Fi 5G channel.</li> <li>• Log in <b>Web Management &gt; Wireless Network &gt; Wi-Fi Radio Setup</b> &gt; toggle the <b>Rescan</b> button.</li> </ul>
	The message, "No Signal", from the InstaShow Host is shown on the display when the InstaShow Button is presenting, or your screen is blank gray.	The connection between your laptop and the InstaShow Button is loose.	Reconnect the USB-C™ cable of the InstaShow Button.
		Your laptop cannot detect the second monitor.	<ul style="list-style-type: none"> <li>• Reconnect the USB-C™ cable of the InstaShow Button.</li> <li>• Reboot your laptop.</li> </ul>

Category	Problem	Cause	Solution
Your screen	Your screen is shown, but your audio is not playing on the audio system of the meeting room.	The audio signal on your laptop is muted.	Right click on the speaker icon and switch off the mute.
		The audio output of the laptop hasn't been set to the second screen (BenQ InstaShow™) from the EDID of the InstaShow Button.	Change the default audio output to the second screen (BenQ InstaShow™) on the laptop.
The InstaShow Button	Your content is removed from the display and the LED indicator of your InstaShow Button is blinking red.	The wireless connection is lost between the InstaShow Button and InstaShow Host.	<ol style="list-style-type: none"> <li>1. The InstaShow Host will restore the Wi-Fi connection automatically.</li> <li>2. If this fails, the LED indicator of your InstaShow Button starts blinking red.</li> <li>3. Unplug the InstaShow Button from your laptop and try again.</li> </ol>
		Wi-Fi interference or signal attenuation	Make sure the transmission distance is within 8M and with no obstacles.
	The LED indicator of the InstaShow Button is blinking red when the power is on.	The InstaShow Host has not been turned on.	Make sure InstaShow Host is turned on.
		The InstaShow Host has not paired with an InstaShow Button.	The InstaShow Host should pair with the InstaShow Button again.
		Wi-Fi interference or signal attenuation	Make sure the transmission distance is within 8M and with no obstacles.
	The LED indicator of the InstaShow Button is always off.	There is no power supply.	Check the USB-C™ port of your laptop. If the port fails to function, try other USB-C™ ports.
The InstaShow Button	The LED indicator on the InstaShow Button remains static red even after it has been powered on for 30 seconds.	The InstaShow Button has not been properly powered off during the resetting process	Reset the InstaShow Button.
	The pairing function cannot be executed via the <b>MODE</b> key while the InstaShow Button is powered on and the LED starts flashing red.		

Category	Problem	Cause	Solution
The InstaShow Host	Nothing is shown on the display at all.	The display is switched off.	Switch on the display.
		The wrong input is selected.	Select the correct input.
		The display cable is not connected properly.	Insert the HDMI cable between the InstaShow Host and the display device again.
		The display fails to show the InstaShow Host's output resolution at 720p in "Guide Screen" or "Idle Screen".	Replace the display with a new one that supports output resolution at 720p.
		The InstaShow Host is in <b>Network Standby Mode</b> when network standby function is enabled.	Press the Present key of the InstaShow Button to start presentation.
The InstaShow Host	Nothing is shown on the display at all.	The InstaShow Host is in <b>HDMI Standby Mode</b> when HDMI standby function is enabled.	Briefly press the power button on the InstaShow Host or power on the display (connected to the InstaShow Host with an HDMI cable). The InstaShow Host will wake up automatically.
		The InstaShow Host is powered off.	Briefly press the power button on the InstaShow Host.
		Insufficient power supply	Change power supply of InstaShow Host to a power adapter.
	The LED indicator on the InstaShow Host remains static red even after it has been powered on for 30 seconds.	The InstaShow Host has not been properly powered off during the resetting process	Reset the InstaShow Host.
EDID	After connecting the InstaShow Button to your laptop, the second screen (InstaShow™) cannot be detected.	The connection between your laptop and the InstaShow Button is loose.	Reconnect the USB-C™ cable of the InstaShow Button.
		Laptop problem	Reboot your laptop.
		The InstaShow Button is shutdown.	Reconnect the USB cable of the InstaShow Button.

Category	Problem	Cause	Solution
Pairing	The message, "Pairing failed", from the InstaShow Host is shown on the display when the InstaShow Host is pairing with the InstaShow Button.	1. Error: 004 2. The InstaShow Host has reached the maximum number of pairing.	Log into the web management, then select <b>Pairing Status &gt; Delete</b> Delete unnecessary pairings.
		Wi-Fi interference or signal attenuation	Make sure the transmission distance is within 8M and with no obstacles.
		The InstaShow Button has not entered the pairing mode in time.	When the InstaShow Host enters pairing mode, the InstaShow Button should also enter pairing mode within two minutes.
Windows Software	When presenting a video file via Gom Media Player, the full-screen image is cut into upper and lower halves.	Media player	Use other media players to play video files, such as Windows Media Player.
Web management	Cannot Log in	Forget the account and password.	<ol style="list-style-type: none"> <li>1. Reset the InstaShow Host.</li> <li>2. The default log in account: admin</li> <li>3. The default log in password is either <b>0000</b> or the SSID with a name of "WDC10_XXXXXX" (shown on the upper right corner of the Guide/Idle screen).*</li> </ol>  To comply with regional-specific regulation requirements, the default <b>Web Management</b> password varies according to the product supplied for your region.
	Laptop cannot connect the SSID with the correct password by Wi-Fi.	Laptop Wi-Fi module cannot support 802.11 AC.	Laptop can connect to the InstaShow Host with an Ethernet cable instead of Wi-Fi connection.
